The School of Biomedical Engineering, Science and Health Systems
Undergraduate Programs

The School of Biomedical Engineering, Science and Health Systems

The School of Biomedical Engineering, Science, and Health Systems (formerly the Biomedical Engineering and Science Institute, founded in 1961) is a leader in biomedical engineering and biomedical science research and education. The undergraduate program was inaugurated in September 1998 and has steadily grown to attract the highest ability students at the University. The program has received accreditation by the Accreditation Board of Engineering Technology (ABET) in 2002 and again in 2008.

Our academic thrust areas, both in research and education, are at the forefront of biosensing, bioimaging, bioinformation engineering and integrated bioinformatics, drug delivery, biomedical ultrasound & optics, bionanotechnology, cellular tissue engineering, neuroengineering and human performance. Emerging initiatives include skin bioengineering, pediatric engineering and homeland security technologies. Various departments at Drexel University offer courses that are suited for students in biomedical engineering and biomedical science. Our curriculum complements the strengths of the Colleges of Arts & Sciences, Business, Engineering, Information Science, Law and Medicine. As a whole, our curriculum offers the advanced knowledge needed for industrial careers, health professions, graduate research or careers in highly specialized fields such as pre-professional health (medical, dental, and veterinary) and pre-law.

The marriage of technology with biology and medicine drives the 21st Century industrial enterprise. Consistent with this mission, we strive for clinical and industrial relevance in our academic pursuits. We enjoy a strong entrepreneurship program in biomedical technologies. Our alliance with regional economic development agencies and corporations together with our advisors from business development, legal, and investment communities sustains the growth of this program. The students and faculty of the School are committed to move their discoveries from our laboratories to clinical practice or home use. The success of our Translational Research in Biomedical Technologies Program has been recognized and funded regionally as well as nationally.

Our School has experienced remarkable growth in recent years thanks to our outstanding research portfolio, high quality and innovative undergraduate program, and our multidisciplinary approach to education and research. Another competitive advantage of our School is the unique free-standing university-level administrative structure with its own tenure-track faculty lines, budget and space. This helps us transcend the traditional organizational boundaries of engineering, sciences and medicine. Our independence allows us to pursue growth and collaborations in various disciplines. Our small size gives us agility to reconfigure and reorganize in response to emerging opportunities. The University Strategic Plan recognizes our School of Biomedical Engineering, Science and Health Systems as “Drexel’s prototype of academic integration. ”

Metropolitan Philadelphia has one of the nation’s highest concentrations of medical institutions and pharmaceutical, biotechnology, medical device and systems industry. The School has forged strategic partnerships with select universities, research institutes, health care institutions and industries in the region. We enjoy a

close working relationship with our Drexel College of Medicine as well as alliances with prominent medical institutions in the region to develop joint research and educational programs. These include University of Pennsylvania, Thomas Jefferson University, the Fox Chase Cancer Center and the Wistar Institute. These collaborative initiatives provide students with ample opportunities in basic and clinical research as well as innovative academic programs.

Applicants to the graduate program must meet the requirements for admission to graduate studies at Drexel University. Candidates for degrees in the School of Biomedical Engineering, Science and Health Systems are required to maintain academics standards applicable to all graduate students at Drexel University.

The School of Biomedical Engineering, Science and Health Systems

Co-operative education and career opportunities available to students include employment in the medical device, equipment, and systems industry; the biomaterial and implant industry; the pharmaceutical industry; the biotechnology and agricultural industry; the telemedicine and tele-health industry; health care; medical and clinical information and management systems; and biomedical technology transfer. Preprofessional options available in the academic programs of the School prepare students for admission to schools of medicine, dentistry, and veterinary medicine. Students may also choose to continue their education at the graduate level to prepare for careers in research and development in biomedical engineering and science.

Visit the Drexel Steinbright Career Development Center page for more detailed information on co-op and post-graduate opportunities.

The School of Biomedical Engineering, Science and Health Systems

Accelerated Bachelor's/Master's Dual Degree Program
The Accelerated BS/MS degree program provides opportunities for strongly motivated students with high ability to progress toward their educational goals at an accelerated pace. The program makes it possible for top engineering students to obtain both degrees in the same time period that it takes most students to obtain a bachelor's degree.

Preprofessional Programs
Students who want to prepare for admission to schools of medicine, dentistry, or veterinary medicine, including the BA/BS /MD and early assurance programs at the Drexel College of Medicine, may obtain professional counseling and assistance from the Office of Preprofessional Programs, 215-895-2437.

University Honors
Program Students in the Biomedical Engineering program may apply for admission to the University Honors Program. Admission depends on superior academic performance at Drexel and may be approved after a personal interview with the Honors Committee.

University Leadership Program
Drexel graduates in Biomedical Engineering will be the leaders of their profession--and their communities-- in the twenty-first century. The University Leadership Program helps cultivate leadership skills and engages students in exploring the complex aspects of successful leadership by offering multi-dimensional courses featuring service learning.

Biomedical Engineering

Bachelor of Science Degree

About the major

Biomedical engineering is an innovative Bachelor of Science degree program developed and delivered in collaboration with the College of Engineering, the College of Arts and Sciences and the College of Information Science and Technology. It prepares students to conceive, design, and develop devices and systems that improve human health and quality of life. Biomedical engineering is the convergence of life sciences with engineering. From child car seats and football helmets to drug-delivery systems, minimally invasive surgery, and noninvasive imaging technology, the work of the biomedical engineer makes a difference in everyone's life.

As preparation for the major in biomedical engineering, students are strongly encouraged to take AP biology courses in high school.

Biomedical Engineering Program Outcomes

Graduates of the Biomedical Engineering program will attain the following skills:

- an understanding of advanced mathematics, physical science, biology and physiology;
- the ability to apply knowledge of mathematics, science and engineering to solve problems at the interface of engineering and biology;
- the ability to design and conduct experiments as well as to analyze and interpret data using statistical, computational or mathematical methods;
- the ability to make measurements on, and interpret data from, living systems addressing the problems associated with the interactions between living and non-living materials and systems;
- the ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, entrepreneurial, environmental, intellectual property rights, social, political, health and safety, manufacturability and sustainability;
- the ability to function on multi-disciplinary teams;
- the ability to identify, formulate, and solve engineering problems;
- an understanding of professional and ethical responsibilities;
- the ability to communicate effectively;
- the ability to understand the impact of engineering solutions in global, economic, environmental and societal contexts;
- a recognition of the need for, and ability to engage in, life-long learning;
- knowledge of contemporary issues;
- the ability to use the techniques, skills, and modern engineering tools necessary for engineering practice; and
- knowledge of interdisciplinary concepts within a biomedical perspective.

S

Areas of Specialization

The undergraduate biomedical engineering curriculum is designed to strike a balance between academic breadth in biomedical engineering and specialization in an area of concentration:

- Biomaterials and Tissue Engineering

- Biomechanics and Human Performance Engineering
- Biomedical Informatics
- Biomedical Devices and Imaging
- Neuroengineering

The program provides innovative experiences in hands-on experimentation and engineering design as well as opportunities for personal growth and development of leadership and communication skills.

Working with a faculty advisor, students can select their core and elective courses from the curricula offered by the School of Biomedical Engineering, Science, and Health Systems and the Departments of Bioscience and Biotechnology, Chemistry, Physics, Mathematics, Computer Science, Chemical Engineering, Mechanical Engineering, Materials Science and Engineering, Electrical and Computer Engineering, and the College of Information Science and Technology.
For more information, visit the The School of Biomedical Engineering, Science, and Health Systems' web site.

Biomaterials and Tissue Engineering

Bachelor of Science Degree in Biomedical Engineering: 200.0 credits

About the concentration

The concentration in Biomaterials and Tissue Engineering includes courses from the Departments of Bioscience & Biotechnology, Chemistry, and Mechanical Engineering & Mechanics. The program builds on the fundamental knowledge of natural and synthetic biomaterials and cellular biology and educates students in the emerging field of cellular and tissue engineering.

Biomaterials research has recently expanded to include fibrous materials and various prosthetic devices requiring the use of both synthetic and natural fibers. The emphasis is on improved materials and design of biological replacement tissues through cellular tissue engineering.

Upon graduation, students will be able to:

- select and evaluate biomaterials for use in biomedical applications *in vivo*;
- develop *in vitro* models for drug delivery, drug toxicity and drug discovery choosing the appropriate biomaterials;
- create high-fidelity tissue models *in vitro*;
- develop and evaluate tissue engineering approaches to initiate and promote regenerative processes *in vivo*.

For more information about this concentration, see Drexel's School of Biomedical Engineering, Science, and Health Systems web site.

MEM 230	**Mechanics of Materials I**	4.0

*General studies electives include all liberal arts electives plus additional subjects, such as business, which do not fall under the subject areas of science, math or engineering. See the Biomedical Engineering General and Liberal Studies List for approved courses. A certain number of General Studies credits are required for graduation with this major.

Writing-Intensive Course Requirements
In order to graduate, all students must pass three writing-intensive courses after their freshman year. Two writing-intensive courses must be in a student's major. The third can be in any discipline. Students are advised to take one writing-intensive class each year, beginning with the sophomore year, and to avoid “clustering” these courses near the end of their matriculation. Transfer students need to meet with an academic advisor to review the number of writing-intensive courses required to graduate.

A "WI" next to a course in this catalog indicates that this course can fulfill a writing-intensive requirement. Departments will designate specific sections of such courses as writing-intensive.

Biomechanics and Human Performance Engineering

Bachelor of Science Degree in Biomedical Engineering: 201.5 credits

About the concentration

The Biomechanics concentration applies engineering principles to study the interactions between humans and various machine systems in both working and living environments. Courses in this area of specialization cover such topics as the mechanics of materials, chronobiology, biomechanics, and human factors and cognitive engineering.

Upon graduation, students will be able to:

- model the effects of external forces on the human body and its tissues;
- design implanted prosthetic devices through an understanding of the interaction between biological tissues and engineering material;
- understand neural control of posture and locomotion;
- apply system approaches to the interaction of humans with their environment in order to optimize performance;
- design devices to aid people with disabilities by capitalizing on their engineering skills and human performance criteria.

For more information about this concentration, see Drexel's School of Biomedical Engineering, Science, and Health Systems web site.

Biomedical Informatics

Bachelor of Science Degree in Biomedical Engineering: 200.0 credits

About the concentration

Bioinformatics is an emerging field of science that is concerned with the management, analysis and visualization of the flood of data being generated in molecular and cellular biology, genomics and other areas of biology and biomedicine. The field of bioinformatics enables information at the gene, protein, cell, tissue, organ, and system level to be integrated and interpreted for early detection, accurate diagnosis, and effective treatment of complex diseases such as cancer.

The Biomedical Informatics concentration includes courses in biology, computer science, and information technology. The concentration introduces information handling systems for people in the allied health professions, with specific examples drawn from health care and covers locating, manipulating, and displaying information in the health system setting. Students are also introduced to the mathematical and computational analysis of biological systems. The systems analyzed include the genome, protein and gene networks, cell division cycles, and cellular level disease. Mathematical tools include matrix algebra, differential equations, cellular automata, and cluster analysis.
Upon graduation, students will be able to:

- select, access and integrate bioinformatics related databases for applications in genomics and proteomics;
- apply biostatistical techniques to analyze high-throughput data for genotyping, gene expression and proteomics data;
- develop and evaluate computational models to describe and simulate gene regulatory, protein and metabolic networks.

Biomedical Devices and Imaging

Bachelor of Science Degree in Biomedical Engineering: 200.5 credits

About the concentration

Biomedical imaging focuses on the theoretical and practical issues related to machine vision, image processing and analysis, and signal processing associated with such medical applications as ultrasound, optics, magnetic resonance, and autoradiographic imaging.

The concentration in Biomedical Devices and Imaging is for those individuals interested in careers in medical imaging, medical device development, and clinical engineering. The concentration covers the fundamentals of modern imaging methodologies, covering aspects of light imaging, ultrasound imaging, and volumetric and functional imaging systems, and the principles of Magnetic Resonance Imaging (MRI).

Upon graduation, students will be able to:

- understand the multi-disciplinary background and limitations of current and emerging instrumentation, imaging and internet technologies used in clinical, pharmaceutical and research environments;
- select and evaluate sensors and imaging modalities for specific biomedical research, diagnostic and theragnostic applications;
- analyze the performance of different systems including microscopical and medical imaging methodologies in terms of safety, resolution and the trade-offs important for a given application;
- optimize digital acquisition, enhancement, visualization and analysis of signals from biomedical instruments in multidimensions;
- understand the impact of compliance with the standards and guidelines of regulatory agencies such as FDA on the design and application of devices in clinical practice and knowledge of basic quality assurance tools.

For more information about this concentration, see Drexel's School of Biomedical Engineering, Science, and Health Systems web site.

Neuroengineering

Bachelor of Science Degree in Biomedical Engineering: 197.5 credits

About the concentration

This concentration focuses on the theory of neural signaling, as well as addressing issues that have a neuroscientific basis, such as locomotion and pattern generation, central control of movement, and the processing of sensory information. Students pursing this concentration will learn the fundamental theory of cellular potentials and chemical signaling, the Hodgkin Huxeley description of action potential generation, circuit representations of neurons and be able to derive and integrate equations describing the circuit as well as design computer models.

Upon graduation, students will be able to:

- model specific aspects of neural systems;
- understand control system theory as applied to neural systems;
- understand how neuroengineering can be applied in clinical situations.

For more information about this concentration, see Drexel's School of Biomedical Engineering, Science, and Health Systems web page.

Term 4		Credits
BIO 201	Human Physiology I	4.0
ENGR 201	Evaluation & Presentation of Experimental Data I	3.0
ENGR 220	Fundamentals of Materials	4.0
ENGR 231	Linear Engineering Systems	3.0
PHYS 201	Fundamentals of Physics III	4.0
	Term Credits	*18.0*

Term 5		Credits
BIO 203	Human Physiology II	4.0
BMES 212	The Body Synthetic	3.0
ENGR 202	Evaluation & Presentation of Experimental Data II	3.0
ENGR 210	Introduction to Thermodynamics	3.0
ENGR 232	Dynamic Engineering Systems	3.0
MEM 202	Engineering Mechanics-Statics	3.0
	Term Credits	*19.0*

Term 6		Credits
BMES 301	Biomedical Engineering Lab I: Experimental Biomechanics	2.0
BMES 302	Lab II: Biomeasurements	2.0
BMES 325	Principles of Biomedical Engineering I	3.0
BMES 372	Biosimulation	3.0
ECE 201	Electric Circuits	3.0
HIST 285	Technology in Historical Perspective	3.0

	Term Credits	*16.0*

Term 7		Credits
BMES 303	Lab III: Biomed Electronics	2.0
BMES 310	Biomedical Statistics	4.0
BMES 326	Principles of Biomedical Engineering II	3.0
ECES 302	Transform Methods & Filtering	4.0
	Term Credits	*13.0*

Term 8		Credits
BMES 304	Lab IV: Ultrasound Images	2.0
BMES 338	Biomedical Ethics and Law	3.0
BMES 381	Junior Design Seminar I	2.0
BMES 411	Chronoengineering I: Biorhythms	3.0
ECES 356	Theory of Control	4.0
PSY 101	General Psychology I	3.0
	Term Credits	*17.0*

Term 9		Credits
BMES 382	Junior Design Seminar II	2.0
BMES 405	Physiological Control Systems	3.0
BMES 451	Transport Phenomena in Living Sys	4.0
ECES 304	Dynamic Systems and Stability	4.0
BMES 375	Computational Bioengineering	4.0
	Term Credits	*17.0*

Term 10		Credits
BIO 462	Biology of Neuron Function	3.0
BMES 401	Biosensors I	4.0
BMES 430	Neural Aspects of Posture and Locomotion	3.0
BMES 491	Senior Design Project I	2.0
PSY 213	Sensation and Perception	3.0
	Term Credits	*15.0*

Term 11		Credits
BMES 477	Neuroengineering I	3.0
BMES 492	Senior Design Project II	2.0
	General studies electives	9.0
	Term Credits	*14.0*

Term 12		Credits
BMES 305	Lab V: Musculoskeletal Anatomy for BME	2.0
BMES 478	Neuroengineering II	3.0
BMES 493	Senior Design Project III	4.0
	Liberal studies elective	3.0
	Term Credits	*12.0*

	Total Credits (minimum)	**197.0**
