2011-2012 Graduate Course Descriptions

Architectural Engineering Courses.....	2
Chemical Engineering Courses.....	2
Civil Engineering Courses.....	5
Computer Science Courses.....	13
Electrical & Computer Engineering: Computers Courses.....	20
Electrical & Computer Engineering: Electrophysics Courses.....	24
Electrical & Computer Engineering: Power Engineering Courses.....	29
Electrical & Computer Engineering: Systems Courses.....	32
Electrical & Computer Engineering Courses.....	38
Engineering Geology Courses.....	39
Engineering Management Courses.....	40
Engineering, General Courses.....	45
Environmental Engineering Courses.....	45
Materials Engineering Courses.....	49
Mechanical Engineering & Mechanics Courses.....	53
Telecommunications Courses.....	66

Architectural Engineering Courses

AE 510 - Intelligent Buildings

An overview of the present and future role of Information Technology in the construction industry with emphasis on the computer tools used throughout the building life cycle by all stakeholders, primarily Building Information Modeling (BIM) and the role of networked-linked sensors and actuators.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

AE 544 - Building Envelope Systems

Science and engineering fundamentals in analysis and design of building envelopes and wall systems. Architectural, structural and environmental (thermal and moisture) concerns; features of selected cladding systems; air and moisture leakage, thermal deficiency, structural distress and premature deterioration; building envelop construction, condition evaluation, maintenance and retrofit.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following Major(s):

Architectural Engineering

Civil Engineering

Pre-Requisites: AE 391 Minimum Grade: C or CIVE 371 Minimum Grade:

C

Repeat Status: Not repeatable for credit

AE 550 - Comfort Analysis & Indoor Air Quality

This course covers characteristics and interaction of thermal, acoustical, luminous and spatial comfort; different types and sources of indoor pollution; models for air filtration; building ventilation requirements, energy use interaction with ventilation, models and simulation programs for IAQ; monitoring and control equipment.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following Major(s):

Architectural Engineering

Civil Engineering

Repeat Status: Not repeatable for credit

AE 551 - Building Energy Systems I

This course covers inverse modeling as a scientific approach to data analysis, different types of inverse methods as applied to building & HVAC & refrigeration equipment energy use, calibrated simulation approach, current research trends.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following Major(s):

Architectural Engineering

Civil Engineering

Mechanical Engineering

Pre-Requisites: AE 550 Minimum Grade: B

Repeat Status: Not repeatable for credit

AE 552 - Building Energy Systems II

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following Major(s):

Architectural Engineering

Civil Engineering

Mechanical Engineering

Pre-Requisites: AE 550 Minimum Grade: B

Repeat Status: Not repeatable for credit

AE 790 - Special Topics

Covers selected advanced level topics in architectural engineering. May be repeated for credit if topics vary.

Credits: 12.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 98 time(s) for 998.00 credit(s)

Chemical Engineering Courses

CHE 502 - Mathematical Methods in Chemical Engineering

Emphasizes formulation of differential and difference equations, both ordinary and partial, governing chemical engineering operations in the steady and unsteady state.

Credits: 3.00

College: College of Engineering

Department: Chemical Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CHE 513 - Chemical Engineering Thermodynamics
Examines thermodynamic principles from a classical viewpoint, including properties of materials, equations of state of mixtures, and chemical and phase equilibria of complex mixtures.
Credits: 3.00
College: College of Engineering
Department: Chemical Engineering
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

CHE 525 - Transport Phenomena I
Presents a unified treatment of transport rate theory, with emphasis on analogies among momentum, energy, and mass transfer, and continuum and molecular theories of matter.
Credits: 3.00
College: College of Engineering
Department: Chemical Engineering
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

CHE 534 - Mass Transfer Operations I
Theory and design of equilibrium stage operations. Separation processes for binary and multicomponent mixtures
Credits: 3.00
College: College of Engineering
Department: Chemical Engineering
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

CHE 543 - Kinetics & Catalysis I
Covers chemical reaction kinetics as applied to chemical engineering. Introduces chemical kinetics and mechanisms and heterogeneous kinetics and catalysis. Includes design of ideal and non-ideal chemical reactors.
Credits: 3.00
College: College of Engineering
Department: Chemical Engineering
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: CHE 502 Minimum Grade: C
Repeat Status: Not repeatable for credit

CHE 554 - Process Systems Engineering
Covers the basic concepts of the systems engineering approach to the design and operation of processing plants. Includes methods for developing control strategies.

Credits: 3.00
College: College of Engineering
Department: Chemical Engineering
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: CHE 502 Minimum Grade: C
Repeat Status: Not repeatable for credit

CHE 556 - Process Optimization
Focuses on optimization of processes from the viewpoint of economic return.
Credits: 3.00
College: College of Engineering
Department: Chemical Engineering
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

CHE 560 - Transport Phenomena in Biological Systems
Covers gas-liquid mass transfer in microbial systems, mass transfer in cells and biofilms, membrane transport, fluid mechanics of fermentation broth, power consumption in agitated vessels, heat transfer, and scale-up of mass transfer equipment.
Credits: 3.00
College: College of Engineering
Department: Chemical Engineering
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites:
Repeat Status: Not repeatable for credit

CHE 562 - Bioreactor Engineering
Covers growth and product formation kinetics, batch and continuous stirred tank bioreactors, tower reactors, immobilized-cell reactors, and immobilized-enzyme reactors.
Credits: 3.00
College: College of Engineering
Department: Chemical Engineering
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites:
Repeat Status: Not repeatable for credit

CHE 564 - Unit Operations in Bioprocess Systems
Covers liquid-liquid extractions, membrane separations, chromatographic separations, filtration, centrifugation, distillation, and leaching.
Credits: 3.00
College: College of Engineering
Department: Chemical Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites:

Repeat Status: Not repeatable for credit

CHE 566 - Dynamics & Control of Bioreactor Process Systems

Dynamics of pH and temperature control systems, dynamics of bioreactors to feed upsets, substrate feed rate control, start-up of bioreactors, dynamics of multiple microbial populations, instrumentation of bioreactors, computer interfacing and control of bioreactors.

Credits: 3.00

College: College of Engineering

Department: Chemical Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CHE 626 - Transport Phenomena II

Transport of mass, energy, and momentum of turbulent systems.

Credits: 3.00

College: College of Engineering

Department: Chemical Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CHE 631 - Heat Transfer

Advanced topics in heat conduction, convection, and radiation with application to design

Credits: 3.00

College: College of Engineering

Department: Chemical Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CHE 635 - Mass Transfer Operations II

Theory and design of continuous contact operations including fixed-bed and fluid-bed processes

Credits: 3.00

College: College of Engineering

Department: Chemical Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CHE 644 - Kinetics & Catalysis II

Advanced topics in kinetics and catalysis including: diffusion and catalysis; optimization of chemical reaction systems; analysis and treatment of kinetic data

Credits: 3.00

College: College of Engineering

Department: Chemical Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CHE 658 - Advanced Process Design

Covers flowsheet analysis and synthesis, batch process design and scheduling, project scheduling, and economic considerations.

Credits: 3.00

College: College of Engineering

Department: Chemical Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CHE 502 Minimum Grade: C

Repeat Status: Not repeatable for credit

CHE 670 - Real-Time Microcomputer Applications

Application of microcomputers in monitoring and control of external devices and processes. Topics include: digital input/output, real-time clock, analog-to-digital and digital-to-analog conversion, noise removal, signal processing, and data communications. Includes hands-on computer laboratory.

Credits: 3.00

College: College of Engineering

Department: Chemical Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CHE 799 - Independent Study in Chemical Engineering

Provides advanced independent study in chemical engineering or related interdisciplinary fields.

Credits: 9.00

College: College of Engineering

Department: Chemical Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

CHE 800 - Special Topics

Covers selected advanced-level topics in chemical engineering. May be repeated for credit when topics vary.

Credits: .50 to 9.00

College: College of Engineering

Department: Chemical Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

CHE 898 - Master's Thesis

Requires fundamental research in chemical engineering. Hours and credits to be arranged.

Credits: 9.00

College: College of Engineering

Department: Chemical Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

CHE 998 - Ph.D. Dissertation

Requires dissertation research in chemical engineering. Hours and credits to be arranged.

Credits: 1.00 to 9.00

College: College of Engineering

Department: Chemical Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

Civil Engineering Courses

CIVE 501 - Model Analysis of Structures

Open to advanced undergraduates. Covers application of models for the analysis and design of complex structures, including development of laws of similitude, methods of fabricating, and testing and instrumentation of models.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 510 - Prestressed Concrete

Open to advanced undergraduates. Covers definitions and general principles, anchorage systems, and loss of prestress; analysis and design of simple beams for flexure, shear, bond, and bearing; partial prestressed and post-tensioned reinforcement; and continuous beams.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 520 - Advanced Concrete Technology

This course covers the mechanical, physical and chemical properties of concrete: characteristics of concrete in the fresh, setting and hardening states; high performance concrete. Factors influencing the mechanical performance of concrete are discussed as well as field testing methods.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

May not be enrolled in one of the following Program Level(s):

Continuing Education

Must be enrolled in one of the following Major(s):

Architectural Engineering

Civil Engineering

Engineering Geology

Pre-Requisites:

Repeat Status: Not repeatable for credit

CIVE 530 - Geotechnical Engineering for Highways

Covers design of stable right-of-way, USDA classification, frost and swell expansion, capillary moisture retention, subgrade compaction, beam on elastic foundation pavement model, loads and resistance of buried pipes, subdrainage, basic slope stability and retaining structures.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 531 - Advanced Foundation Engineering

Covers design of shallow foundations (footing and mats), deep foundations (piles, augered, drilled shafts) and retaining structures for stability and deformation performance.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 560 - Introduction to Coastal & Port Engineering

Provides an overview of coastal engineering problems and their solution, including shoreline erosion, ocean waves and wave theories, wave generation, diffraction, refraction, harbor hydraulics, coastal currents, and tidal inlet hydraulics and sedimentation.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 561 - Introduction to Hydrology

Covers climate and weather, precipitation, evaporation and transpiration, drainage basins, and hydrographs.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: EGEO 700 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 563 - Coastal Processes

This course provides a detailed presentation of hydraulic and sedimentary processes occurring in the coastal zone with a view toward applying knowledge of the processes to coastal erosion and shoreline stabilization problems.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 560 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 585 - Transportation Planning & Capacity

Open to undergraduates. Covers prediction of travel demand; principles of highway and transit capacity; level-of-service concepts; uninterrupted and interrupted flow; traffic characterization by volume, speed, and density; operational analysis and design of freeways, highways, and urban streets; intermodal systems, intelligent transportation systems (its), and mass transit.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 586 - Geometric Design of Highways

Open to undergraduates. Covers classification of highway and transit systems with relation to function, funding, ownership, and design; characteristics of design vehicles, drivers, and traffic; elements of design including sight distance, horizontal alignment, and vertical alignment; cross-section and roadside design; and at-grade and separated intersections and interchanges.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

CIVE 605 - Advanced Mechanics Of Material

Open to advanced undergraduates. Covers shear flow and shear center, unsymmetrical bending, torsion of non-circular and open sections, bending of curved beams, stress at a point, and failure theories.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following College(s)/School(s):

College of Engineering

Must have the following Classification(s):

Senior

Repeat Status: Not repeatable for credit

CIVE 615 - Infrastructure Condition Evaluation

This course covers the tools necessary for the inspection and evaluation of infrastructure. Non-destructive testing (NDT) techniques are introduced and applications and limitations of NDT techniques for a variety of structures are illustrated. Also covered are the policies for determining the physical condition and maintenance needs for highway bridges.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

May not be enrolled in one of the following Program Level(s):

Continuing Education

Must be enrolled in one of the following Major(s):

Architectural Engineering

Civil Engineering

Engineering Geology

Pre-Requisites: CIVE 250 Minimum Grade: D and CIVE 520 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 632 - Advanced Soil Mechanics

Consolidation magnitude and time rate of settlement, secondary compression, mitigating settlement problems, shear strength of cohesive and non-cohesive soils, critical state soil mechanics, undrained pore pressure response, SHANSEP undrained strength.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 635 - Slope Stability and Landslides

Slope process and mass wasting; landslide characteristics, features and terminology; limit equilibrium slope stability analysis, including Bishop, Janbu, Spenser, Morgenstern-Price methods; effects of water on slope stability; dynamic (earthquake) stability analysis methods; introduction to rock slopes, slope stability investigations, and design and repair.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 636 - Ground Modification

This course covers the improvement of soil properties to meet project requirements, including surface and in situ technologies: compaction, densification, precompression, stabilization with admixtures, grouting and dewatering.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 640 - Environmental Geotechnics

This course covers the analysis and control of subsurface exploration, groundwater remediation, pollutant-soil interaction and waste containment barriers and drains.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 650 - Geosynthetics I

Open to advanced undergraduates. Presents a basic description of the various products, relevant aspects of polymeric materials, and an overview of each category of geosynthetics. Covers geotextile testing and design on the basis of primary application function: separation, reinforcement, filtration, drainage, barrier, and combined.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following College(s)/School(s):

College of Engineering

Must have the following Classification(s):

Senior

Repeat Status: Not repeatable for credit

CIVE 651 - Geosynthetics II

Continues CIVE 650. Covers design and testing of geogrids for reinforcement applications and geonets for drainage applications. Presents geomembrane design and testing from an applications perspective in the areas of environmental, geotechnical, transportation, and hydraulic engineering.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 650 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 652 - Geosynthetics III

Continues CIVE 651. Covers design and testing of geosynthetic clay liners as a hydraulic/gas barrier and geopipes as drainage materials in numerous application. Presents geocomposites in separation, reinforcement, filtration, drainage, and barrier applications.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 651 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 660 - Hydrology-Stream Flow

Covers precipitation, runoff, evaporation and transpiration, streamflow, floodflow, and minimum flow. Pays special attention to factors affecting water supply and quality.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following College(s)/School(s):

College of Engineering

Must have the following Classification(s):

Senior

Pre-Requisites: CIVE 561 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 661 - Groundwater Hydraulics

Covers occurrence of underground flow, groundwater supply, pollution problems, and well and aquifer hydraulics.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 561 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 662 - Hydrodynamics I

Covers theory of perfect fluids, Euler's equations of motion, continuity equation and energy equation, velocity potential and stream function, sources and sinks, circulation and vorticity, flow-around bodies and flow in channels, and jet flow.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 663 - Hydrodynamics II

Extends the theory of perfect fluids to cover fluid forces and moments on bodies, free streamline theory, and extension of vorticity theory.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 662 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 664 - Open Channel Hydraulics

Covers principles of flow in open channels, conservation laws, uniform flow, critical flow, gradually varied flow, backwater computations, channel design, and numerical computation of flows having a free surface.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following College(s)/School(s):

College of Engineering

Must have the following Classification(s):

Senior

Repeat Status: Not repeatable for credit

CIVE 665 - Computational Hydraulics I

This course continues CIVE 664 to cover the application of mathematical and numerical techniques to model complex open channel hydraulic processes. At each stage the fundamental hydraulic principles are reviewed to assure proper construction of a modeling algorithm and to assist in interpretation of results.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

May not be enrolled in one of the following Program Level(s):

Continuing Education

Must be enrolled in one of the following Major(s):

Civil Engineering

Pre-Requisites: CIVE 664 Minimum Grade: C and CIVE 330 Minimum

Grade: D and CIVE 341 Minimum Grade: D and CIVE 430 Minimum

Grade: D

Repeat Status: Not repeatable for credit

CIVE 666 - Free Surface Flows

This course extends the concepts of one-dimensional open channel flow to cover both the physical understanding and the application of mathematical and numerical techniques to model very complex open channel hydraulics problems including transients, countercurrent flows and complex boundary conditions.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

May not be enrolled in one of the following Program Level(s):

Continuing Education

Must be enrolled in one of the following Major(s):

Civil Engineering

Pre-Requisites: CIVE 664 Minimum Grade: C and CIVE 665 Minimum

Grade: C

Repeat Status: Not repeatable for credit

CIVE 701 - Structural Analysis I

Covers basic principles of structural analysis, including elastic deflection; elastic analysis of statically indeterminate structures by methods of virtual work, Castigliano's theorems, and moment distribution; and the Muller-Breslau principle and application to influence lines for continuous members and frames. Introduces numerical techniques.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

CIVE 702 - Structural Analysis II

Covers matrix analysis of structures using finite elements, including elastic analysis of structures by influence coefficients, Argyris force method, direct stiffness method, and the displacement method. Introduces the finite-element method for planar structures.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 701 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 703 - Structural Analysis III

Covers development of stiffness functions for planar and three-dimensional finite elements, and application to frame, plate, shell, and massive structures. Introduces the general application of finite elements to continuum problems.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 702 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 704 - Bhvr & Stab Struc Membs I

Covers development of the basic differential equations of member behavior, including second-order effects, in-plane beam-column behavior, column buckling, elastic and inelastic behavior, energy methods, and approximate methods.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 705 - Bhvr & Stab Struc Membs II

Covers general torsion of thin-walled open, closed, and combined open-and-closed cross-sections; lateral torsional buckling; biaxial bending; elastic and inelastic behavior; approximate methods; and frame buckling.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 704 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 710 - Desn & Struc Int Bldg Sys

Covers integration of design and building cycle, building envelope, structural morphology, composite structures, thermal and moisture design, fire and smoke, sound and vibration, building failure, and repair and restoration.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 711 - Engineered Masonry I

Covers masonry materials, structural behavior of masonry assemblages, and deformational characteristics of brick and block masonry; performance of load-bearing wall systems and design of unreinforced masonry elements; and special design and construction topics.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 712 - Engineered Masonry II

Covers fundamental concepts of reinforced masonry, reinforced wall design, column and pilaster design, seismic resistance of masonry structures, prestressed masonry, and applied design of low-and high-rise buildings.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 714 - Behavior of Concrete Structures I

Covers reinforced concrete members; relationship between results of research and current specifications for design of members subjected to axial loads, flexure, combined axial load and flexure, combined shear and flexure, long columns, bond and anchorage, and limit design; application to design of determinate and indeterminate reinforced concrete frames; and development of current code provisions for design of floor slabs in buildings.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 715 - Behavior of Concrete Structures II

Continues CIVE 714.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 714 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 717 - Behavior of Metal Structures I

Covers load and resistance factor design, including tension, bolted and welded connections, block-shear, compression, built-up compression members, lateral-torsional instability, light-gauge metal buckling and post-buckling strength, and behavior.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 605 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 718 - Behavior of Metal Structures II

Covers load and resistance factor design, including design and behavior of metal structural members and connections, flexural members including plate girders, bracing and lateral-torsional buckling resistance, torsion and other combined loading, and composite beams and columns.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 717 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 719 - Behavior of Metal Structures III

Covers load and resistance factor design, including idealization and design of structures and their connections, frame bracing and sway, frame design philosophy, optimization, fatigue, and fracture.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 718 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 730 - Experimental Soil Mechanics I

Covers methods and techniques of soil testing, including interpretation and evaluation of test data, and fundamentals of soil behavior.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 731 - Experimental Soil Mechanics II

Continues CIVE 730.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 730 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 732 - Experimental Soil Mechanics III

Continues CIVE 731.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 731 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 737 - Seismic Geotechnics

Introduction to earthquake hazards and seismology; strong ground motion parameters, deterministic and probabilistic seismic hazard analysis, influence of subsurface conditions and topography and ground motion, soil liquefaction, and brief coverage of seismic slope stability, design of retaining structures, and soil-structure interaction.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 632 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 752 - Coastal Structures

This course briefly reviews the functional design of coastal and port structures and deals in detail with forces on those structures. Forces caused by waves and currents, and mooring and vessel impacts are addressed.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 563 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 754 - Props & Proc Polymeric Mats

This course focuses on the uses and characteristics of polymeric materials used in civil and architectural engineering infrastructure. Also covered are micro-structure, physical and chemical properties and mechanical behavior, and the effects of manufacturing on the properties of the products.

Credits: 3.00

College: College of Engineering
Department: Civil, Arch, & Environ Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Must be enrolled in one of the following Major(s):
Architectural Engineering
Civil Engineering
Materials Engineering
Pre-Requisites: CIVE 250 Minimum Grade: D and TDEC 211 Minimum Grade: D
Repeat Status: Not repeatable for credit

CIVE 755 - Durability of Polymeric Construction Materials
This is a continuation of CIVE 754 and concentrates on protecting and predicting service lifetimes. It covers physical aging, mechanical stabilization and chemical degradation of polymeric materials and the products in which they are incorporated for field use. Covered in this course is the fundamental degradation mechanisms of different polymeric materials commonly used in Civil Engineering practice. Also covered are test methods and extrapolation methodologies for predicting long-term performance.
Credits: 3.00
College: College of Engineering
Department: Civil, Arch, & Environ Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: CIVE 754 Minimum Grade: C
Repeat Status: Not repeatable for credit

CIVE 756 - Evaluation of Polymer Construction Materials
This lab course is designed to integrate and extend the coverage of CIVE 754 and 755 so that students have a full concept of the behavior of polymeric construction materials. A series of thermal analysis and physical, chemical, and mechanical tests are included. The stress relaxation, stress cracking, oxidation, and applications of test results in infrastructure and environmental applications are discussed, including problems in comparative analysis of test results and their implications in design and specification.
Credits: 3.00
College: College of Engineering
Department: Civil, Arch, & Environ Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: CIVE 754 Minimum Grade: D and CIVE 755 Minimum Grade: D
Repeat Status: Not repeatable for credit

CIVE 767 - Surface Water Mixing Processes
This course covers hydrodynamic mixing and transport processes in free-surface flows. Basic mixing processes including molecular diffusion, turbulent diffusion, and dispersion are also covered. Emphasis will be on the solution of the advection-diffusion equation

with various boundary conditions. Additional topics include boundary exchanges, non-ideal mixing in rivers, and analysis of jets and plumes.
Credits: 3.00
College: College of Engineering
Department: Civil, Arch, & Environ Engr
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Must be enrolled in one of the following Major(s):
Civil Engineering
Environmental Engineering
Pre-Requisites: CIVE 664 Minimum Grade: C
Repeat Status: Not repeatable for credit

CIVE 768 - Sediment & Contaminant Transport
This course covers the transport of sediments and reactive solutes in surface waters. Reviewed is the classic theory for bed-load and suspended sediment transport; interplay of stream flow, frictional resistance and sediment transport. Biogeochemical processes that influence contaminant mobility and integration of physical and chemical processes in contaminant transport models are also discussed.
Credits: 3.00
College: College of Engineering
Department: Civil, Arch, & Environ Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Must be enrolled in one of the following Major(s):
Civil Engineering
Environmental Engineering
Pre-Requisites: ENVE 767 Minimum Grade: C or CIVE 767 Minimum Grade: C
Repeat Status: Not repeatable for credit

CIVE 790 - Special Topics
Covers selected advanced-level topics in civil engineering. May be repeated for credit if topics vary.
Credits: 9.00
College: College of Engineering
Department: Civil, Arch, & Environ Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

CIVE 799 - Independent Study
Independent study on a topic selected by the student. Independent study is supervised by a faculty member and guided by a plan of study.
Credits: 12.00
College: College of Engineering
Department: Civil, Arch, & Environ Engr
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Repeat Status: Course can be repeated 98 time(s) for 998.00 credit(s)

CIVE 801 - Dynamics of Structures I

Covers formulation of equations of motion, including generalized single-degree-of-freedom systems, free vibration response, undamped and damped systems, harmonic analysis, resonance and vibration isolation, response to periodic loading, impulsive loading, response to general dynamic loading, non-linear structural response, and Rayleigh's method and other variational techniques. Introduces multi-degree-of-freedom systems.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 802 - Dynamics of Structures II

Covers formulation of multi-degree-of-freedom equations of motion, including evaluation of structural property matrices; elastic properties, mass properties, damping, and external loading; geometric stiffness; undamped free vibrations; analysis of dynamic response; practical vibration analysis; Stodola method; Holzer method; reduction of degrees of freedom; matrix iteration and other techniques; analysis of non-linear systems; variational formulation of the equations of motion; partial differential equations of motion; and free vibrations of beams.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 801 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 803 - Dynamics of Structures III

Covers distributed parameter dynamic systems, equations of motion, free and forced vibrations, analysis of structural response to earthquakes, seismological background, deterministic analysis of single-degree-of-freedom and multi-degree systems, multi-degree-of-freedom and distributive parameter systems, soil-structure interaction, non-linear response to earthquakes and current design code requirements, dynamics of complex structures, modeling, and use of large computer codes.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 811 - Plates and Shells I

Covers analysis of circular, rectangular, and continuous plates by classical and approximate methods, including the folded plate theory.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 812 - Plates and Shells II

Covers the general theory of thin shells, cylindrical shells, surfaces of revolution, hyperbolic paraboloids, and other shells of double curvature.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 811 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 813 - Plates and Shells III

Covers buckling and vibration analysis, including application of finite-elements methods and anisotropic behavior.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 812 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 831 - Deep Foundations

Covers topics including mat foundation design using plate theory, continuous beam design using beam-on-elastic foundation theory, and pile design.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 833 - Earth Retaining Structures

Covers lateral earth pressure theories, analysis and design of temporary and permanent retaining structures, surcharge load, excavations, and loads on buried conduits.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 838 - Soil Behavior

Particle-scale behavior of soil and assemblages; clay mineralogy; soil formation, composition, structure and properties; soil water interaction; clay-water-electrolyte systems, adsorption-desorption and ion exchange; conduction phenomena; micromechanics; volume change behavior; strength and deformation behavior.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 632 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 839 - Geomechanics Modeling

This course covers constitutive laws in geomechanics, including linear elastic, quasi-linear (hyperbolic) elastic, linear elastic-perfectly plastic and elasto-plastic models based on critical state soil mechanics. The finite element method is used to solve geotechnical boundary value problems incorporating different constitutive models.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CIVE 632 Minimum Grade: C

Repeat Status: Not repeatable for credit

CIVE 898 - Master's Thesis

Involves investigation of an approved topic. Required of full-time master's degree students.

Credits: .50 to 20.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CIVE 997 - Research

Research.

Credits: 1.00 to 12.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 98 time(s) for 998.00 credit(s)

CIVE 998 - Ph.D. Dissertation

Involves investigation of an approved topic. Required of Ph.D. students.

Credits: 1.00 to 12.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

Computer Science Courses

CS 500 - Database Theory

Introduces relational and knowledge base data models and contrasts the expressiveness of the two models. Covers semantics of knowledge bases, negation, dependencies, Armstrong's axioms, decompositions, and normal forms.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CS 510 - Introduction to Artificial Intelligence

Well-formed problems; state spaces and search spaces; Lisp and functional programming; uniformed search; heuristic search; stochastic search; knowledge representation; propositional logic; first order logic; predicated calculus; planning; partial order planning; hierarchical planning.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CS 511 - Robot Laboratory

Building and programming machines built out of construction pieces, a micro-controller, actuators, motors, sensors, that interact with the world using limited computational resources. Issues in mechanics, physics, electronics, real-time control, uncertainty, map building, path planning, and other topics in introductory robotics.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 510 Minimum Grade: C or CS 583 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 520 - Computer Science Foundations

Survey of basic mathematics concepts needed for the study of computer science at the graduate level: induction, iteration, recursion; analysis of program running time; elementary probability and combinatorics; relations, graphs and trees; regular expressions and finite automata; propositional and predicate logic.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CS 521 - Data Structures & Algorithms I

Techniques for analyzing algorithms: asymptotic notation, recurrences, and correctness of algorithms; divide and conquer: quick sort, merger sort, median and order statistics; elementary data structures: hashing, binary heaps, binary search trees, balanced search trees; graph algorithms: Depth and Breadth first searches, connected components, minimum spanning trees, shortest paths in graphs.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CS 522 - Data Structures & Algorithms II

Discussion of algorithm design techniques, augmented data structures including Binomial and Fibonacci heaps and Splay tree; Amortized analysis of data structures, topics in pattern and string matching, network flow problem, matching in bipartite graphs, and topics in complexity theory including reduction and NP-completeness, and approximation algorithms.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 521 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 525 - Theory of Computation

Theory of computation introduces basic mathematical models of computation and the finite representation of infinite objects. These topics covered in the course include: finite automata and regular languages, context free languages, Turing machines, Partial recursive functions, Church's Thesis, undecidability, reducibility and completeness, and time complexity.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 521 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 530 - Developing User Interfaces

This course examines the implementation of multimodal user interfaces within the context of interface design and evaluation. The course involves both practice implementing interfaces using current technologies and study of topical issues such as rapid prototyping, advanced input, and assistive technology.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CS 536 - Computer Graphics

An introduction to the basic concepts of computer graphics, including the graphics pipeline, 2D drawing, 3D viewing, mathematical representations of objects (lines, curves, surfaces and solids), color, and how these concepts are implemented.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CS 540 - High Performance Computing

Covers basic von Neumann architectural concepts involving memory organization, instruction, and data representations, including computer number systems, assembler and linker operations, character codes, floating point numbers, IEEE standard, subroutines and coroutines, macros, traps and interrupts, and overview of virtual memory concepts. Includes assembly language programming and laboratory exercises.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

CS 543 - Operating Systems

Covers the classical internal algorithms and structures of operating systems, including CPU scheduling, memory management, and device management. Considers the unifying concept of the operating system as a collection of cooperating sequential processes. Covers topics including file systems, virtual memory, disk request scheduling, concurrent processes, deadlocks, security, and integrity.

Credits: 3.00

College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

CS 544 - Computer Networks

To examine computer networks using networking models (TCP/IP, OSI and ATM) and break down computer networking, examine each layer and its duties and responsibilities. To analyze networking protocols and understand the design. To use the Internet and other example protocols to illustrate the theory and operation of each layer.

Credits: 3.00
College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

CS 550 - Programming Languages

Covers basic concepts of the design and implementation of programming languages, including data representation and types, functions, sequence control, environments, block structure, subroutines and coroutines, storage management. Emphasizes language features and implementation, not mastery of any particular languages.

Credits: 3.00
College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

CS 551 - Compiler Construction I

Provides a thorough study of modern compiler techniques. Topics include scanners, parsers with emphasis on LR parsing, and syntax-directed translation. Requires students to use a parser generator to write a compiler for a non-trivial language. Examines several advanced topics in depth, such as automatic code generation, error recovery, and optimization techniques.

Credits: 3.00
College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: CS 525 Minimum Grade: C
Repeat Status: Not repeatable for credit

CS 552 - Compiler Construction II

Continues CS 551. Examines several advanced topics in depth, such as automatic code generation, error recovery, optimization techniques, data flow analysis, and formal semantics.

Credits: 3.00
College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: CS 551 Minimum Grade: C
Repeat Status: Not repeatable for credit

CS 567 - Applied Symbolic Computation

For users of symbolic computation (maple, mathematical, derive, macsyma) who wish to gain an understanding of fundamental symbolic mathematical methods. Includes introduction to a symbolic mathematical computation system and application to problems from mathematics, science and engineering. Also included programming and problems specific to symbolic computation.

Credits: 3.00
College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

CS 571 - Program Tools and Environments

Covers UNIX operating system, Shell programming, PERL, JAVA, and advanced features of C++ from the viewpoint of efficient software development.

Credits: 3.00
College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

CS 575 - Software Design

This course introduces fundamental software design principles and methodologies, covers: software architecture design in general, and focuses on service-oriented architecture in particular. Students will learn most influential papers in software engineering realm, design and implement a service-oriented project, and explore how to apply well-established theoretical principles into modern software design.

Credits: 3.00
College: College of Engineering
Department: Computer Science
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Undergraduate Quarter
Pre-Requisites:
Repeat Status: Not repeatable for credit

CS 576 - Dependable Software Systems

Intended for CS and MSSE students; others must obtain departmental permission to enroll. Offers an in-depth treatment of software testing and software reliability, two components of developing dependable software systems. Testing topics include path testing, data-flow testing, mutation testing, program slicing, fault interjection and program perturbation, paths and path products, syntax testing, logic-based testing, testing within the software development process, test execution automation and test design automation tools. Reliability topics include reliability metrics, fault avoidance, cleanroom software development, fault tolerance, exception handling, N-version programming, recovery blocks, formal methods, functional specifications, and Z notation.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

May not be enrolled in one of the following Program Level(s):

Continuing Education

Undergraduate Quarter

Must have the following Classification(s):

Masters Program

Repeat Status: Not repeatable for credit

CS 583 - Introduction to Computer Vision

Theoretical and algorithmic foundation and applications of computer vision. Covered topics include image formation, image sensing, image filtering, lightness, radiometry, motion, image registration, stereo, photometric stereo, shape-from-shading, and recognition with an emphasis on the underlying mathematics and computational models and complexity as well as computational implementation of representative applications through multiple programming assignments.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

May not be enrolled in one of the following Program Level(s):

Continuing Education

Repeat Status: Not repeatable for credit

CS 610 - Advanced Artificial Intelligence

Representation, reasoning, and decision-making under uncertainty; dealing with large, real world data sets, learning; and solving problems with time-varying properties; how to apply AI techniques toward building intelligent machines that interact with dynamic, uncertain worlds.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 510 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 612 - Knowledge-based Agents

Fundamentals of agent-based computing; distributed AI; representations; agent communication languages; reasoning (expert, rule-based, case-based, production systems); network communication protocols; emergent behavior; swarm intelligence.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 510 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 613 - Machine Learning

This course studies modern statistical machine learning with emphasis on Bayesian modeling and inference. Covered topics include fundamentals of probabilities and decision theory, regression, classification, graphical models, mixture models, clustering, expectation maximization, hidden Markov models, Kalman filtering, and linear dynamical systems.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 510 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 620 - Advanced Data Structure and Algorithms

This course studies how advanced topics are used in the real world and generates an appreciation of where algorithms are used to understand various considerations that make a good algorithm. Topics: data compression, geometrical algorithms in search and indexing, pattern matching, sparse linear systems, applications of linear programming, and computational gene recognition.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 522 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 621 - Approximation Algorithms

Study of techniques for designing approximation solution to NP-hard problems. Classification of problems into different categories based on the difficulty of finding approximately sub-optimal solutions for them. The techniques will include greedy algorithms, sequential algorithms, local search, linear and integer programming, primal-dual method, randomized algorithms, and heuristic methods.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 522 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 623 - Computational Geometry

Introduction to algorithms and Data Structures for computational problems in discrete geometry (for points, lines and polygons) primarily in finite dimensions. Topics include triangulation and planar subdivisions, geometric search and intersections, convex hulls, Voronoi diagram, Delaunay triangulation, line arrangements, visibility, and motion planning.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 521 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 630 - Cognitive Systems

This course explores the principles of cognition and intelligence in human beings and machines, focusing in how to build computational models that, in essence, think and act like people. The course reviews existing frameworks for such models, studies model development within one particular framework, and discusses how models can be employed in real-world domains.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 510 Minimum Grade: C or CS 530 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 631 - HCI: Computing Off The Desktop

This course discussed the use of the computers "off-the-desktop," focusing in particular on design and implementation aspects of the user experience. The course is taught as a graduate seminar: while there are minimal lectures to introduce important concepts, the majority of the time is spent presenting and discussing research papers in each class session. The course also involves a multi-week individual project in which students design, implement, and evaluate an "off-the-desktop" interface.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 530 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 634 - Advanced Computer Vision

A research-intensive course on advanced topics that reflect the state-of-the-art of current research activities in computer vision. The course alternates between lectures on the fundamentals of, and paper presentations by the students on, selected topics.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 583 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 636 - Advanced Computer Graphics

Texture and Bump maps; rendering techniques (phong, gourand, radiosity); particle systems; hierarchical models; photorealism; non-photorealistic rendering; geometric compression; mathematical structures for graphics.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 536 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 637 - Interactive Computer Graphics

This is a project-oriented class that covers the concepts and programming details of interactive computer graphics. These include graphics primitive, display lists, picking, shading, rendering buffers and transformations. Students will learn an industry-standard graphics system by implementing weekly programming assignments. The course culminates with a student-defined project.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 536 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 643 - Advanced Operating Systems

In-depth examination of operating systems issues expanding on topics covered in CS 543 (Operating Systems) including: Kernel services, memory management, input/output, file systems, interprocess communication, networking, device drivers, system initialization. Included discussion of production systems such as BSD Unix and Microsoft Windows.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 543 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 645 - Network Security

The purpose of this course is to cover the principles and practice of cryptography and network security. The first half of the course covers cryptography and network security techniques. The second part deals with the practice of network security, i.e. with the processes and application that have to be in place to provide security.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 543 Minimum Grade: C and CS 544 Minimum Grade:

C

Repeat Status: Not repeatable for credit

CS 647 - Distributed Systems Software

In-depth discussion of fundamental concepts of distributed computer systems. Covers development techniques and runtime challenges, with a focus on reliability and adaptation concerns. Subjects discussed include: interprocess communication, remote procedure calls and method invocation, middleware, distributed services, coordination, transactions, concurrency control and replication. Significant system-building term project in Java or similar language.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 543 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 650 - Program Generation & Optimization

This course introduces the student to the foundations and state-of-the-art techniques in high performance software development for numeric libraries and other important kernels. Topics include: 1) fundamental tools in algorithm theory, 2) optimizing compilers, 3) effective utilization of the memory hierarchy and other architectural features, 4) how to use special instruction sets, and 5) an introduction to the concepts of self-adaptable software and program generators.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 550 Minimum Grade: C and CS 540 Minimum Grade:

C

Repeat Status: Not repeatable for credit

CS 668 - Computer Algebra I

Introduction to Foundations of Symbolic Computation. Typical topics : Arithmetic with large integers, rational numbers, polynomials, modular arithmetic, greatest common divisors, chinese remainder algorithm.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 521 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 669 - Computer Algebra II

The course continues the introduction to symbolic computation. Typical topics include polynomial root computation, exact arithmetic with real algebraic numbers and the solution of polynomial systems of equations using groebner or elimination methods.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 668 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 675 - Reverse Software Engineering

Expose students to the challenges of understanding large legacy software systems. Course approach is based on hands-on practical experience, where teams of students work on real software using state of the art reverse engineering tools for source code analysis, dynamic analysis and profiling, software clustering, and visualizations.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: CS 575 Minimum Grade: C

Repeat Status: Not repeatable for credit

CS 676 - Parallel Programming

Covers a variety of paradigms and languages for programming parallel computers. Several tools for debugging and measuring the performance of parallel programs will be introduced. Issues related to writing correct and efficient parallel programs will be emphasized. Students will have ample opportunity to write and experiment with parallel programs using a variety of parallel programming environments.

Credits: 3.00

College: College of Engineering

Department: Computer Science

Restrictions:

Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: CS 521 Minimum Grade: C and CS 543 Minimum Grade: C
Repeat Status: Not repeatable for credit

CS 680 - Special Topics in Computer Science
Special Topics Covers topics of special interest to students and faculty.
Credits: 12.00
College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 98 time(s) for 998.90 credit(s)

CS 690 - Independent Study in Computer Science
Independent study in computer science under faculty supervision. After finding a willing Computer Science Department faculty supervisor and working out the term of study, students obtain approval to take this course from the department's graduate advisor.
Credits: 1.00 to 6.00
College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 3 time(s) for 18.00 credit(s)

CS 741 - Computer Networks II
Continues CS 740.
Credits: 3.00
College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: CS 544 Minimum Grade: C
Repeat Status: Not repeatable for credit

CS 751 - Database Theory II
Covers topics in database theory and implementation, varying yearly. May include physical data organization, transaction management, concurrency, distributed data-bases, and semantics.
Credits: 3.00
College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: CS 500 Minimum Grade: C
Repeat Status: Not repeatable for credit

CS 759 - Complexity Theory
Introduces formal models of computation, including inherent difficulty of various problems, lower bound theory, polynomial reducibility among problems, Cook's theorem, NP-completeness, and approximation strategies.
Credits: 3.00
College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: CS 525 Minimum Grade: C
Repeat Status: Not repeatable for credit

CS 770 - Topics in Artificial Intelligence
Covers issues in robotics, vision, and pattern recognition.
Credits: 3.00
College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: CS 610 Minimum Grade: C
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

CS 780 - Advanced Topics in Software Engineering
A research-intensive course on advanced topics in software engineering suitable for students who are either pursuing or intend to pursue an advanced degree (M.Sc or Ph.D.) in software engineering. Although the specific topics in the course will vary, students will be asked to survey and study the academic literature in an area of software engineering, and work toward projects that have the potential to evolve into long-term research efforts.
Credits: 3.00
College: College of Engineering
Department: Computer Science
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Pre-Requisites: CS 575 Minimum Grade: C or CS 576 Minimum Grade: C
Repeat Status: Course can be repeated 3 time(s) for 9.00 credit(s)

CS 898 - Master's Thesis
Master's thesis.
Credits: 1.00 to 12.00
College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

CS 997 - Research in Computer Science

Research.
Credits: 1.00 to 12.00
College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 98 time(s) for 998.00 credit(s)

CS 998 - Ph.D. Dissertation
Hours and credits to be arranged.
Credits: 1.00 to 12.00
College: College of Engineering
Department: Computer Science
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 20 time(s) for 45.00 credit(s)

Electrical & Computer Engineering: Computers Courses

ECEC 500 - Fundamentals Of Computer Hardware
Covers computer organization and architecture; elements of computer hardware, processors, control units, and memories; hardware for basic mathematical operations; tradeoffs between speed and complexity; examples of embedded systems; microcontrollers; systems modeling.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECEC 501 - Computational Principles of Representation and Reasoning
This course presents fundamentals of discrete mathematics as applied within the computer engineering and manufacturing environment. Students are given the theoretical background in representation and reasoning for a broad variety of engineering problems solving situations. Entity-relational techniques of representation are demonstrated to evolve into the object-oriented approach. Various search techniques are applied in the cases of representing engineering systems by using theory of automata techniques.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECEC 502 - Principles of Data Analysis
This course presents theoretical methods and techniques of model development applicable within the computer engineering design and

manufacturing environment. Students are given the theoretical background in data analysis (including "data mining"). Emphasis is on hybrid systems and discrete events systems. Various methods of recognizing regularities in data will be presented. Elements of the theory of clustering and classification will be dealt with for the paradigm of software and hardware problems
Credits: 3.00

College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites:
Repeat Status: Not repeatable for credit

ECEC 503 - Principles of Decision Making
This course presents theoretical fundamentals and engineering techniques of decision making and problem solving applicable within the computer engineering design and manufacturing environment. Students are given the theoretical background in optimization methods for a broad variety of situation. Elements of the theory of planning and on-line control of systems are presented within the scope of software and hardware computer design and control.

Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites:
Repeat Status: Not repeatable for credit

ECEC 511 - Combinational Circuit Design
Representing arithmetic. Logic and syntax data for machine processing. Switching algebra: Boolean and multiple values. Identification and classification of functions. Realizing completely specified and incompletely specified Boolean functions. Issues in designing large communication/control Boolean functions. Fault and testing of Boolean function

Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECEC 512 - Sequential Circuit Design
Finite automata and their realization by sequential machines, capabilities, transformation, and minimization of finite automata, linear finite automata. Clocked pulsed and level mode sequential circuits. Malfunctions in sequential circuits: hazards, races, lockouts, metastability. Issues of state assignment. Evolution of memory elements design: ROM vs. RAM vs. associative memory.

Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEC 511 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEC 513 - Design for Testability

Economics vs. Complexity vs. Strategy of Testing; Fault Models; Test Generation; Testability Analysis & Designing Testable Circuits; Testing Microprocessors, Memories and Computer Components; Test Data Compression; Fault Tolerant Hardware; Reliably vs. Availability; Redundancy and Error Correcting Codes.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEC 511 Minimum Grade: C and ECEC 512 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEC 520 - Dependable Computing

Fundamental design issues involved in building reliable, safety-critical, and highly available systems. Topics include testing and fault-tolerant design of VLSI circuits, hardware and software fault tolerance, information redundancy, and fault-tolerant distributed systems.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEC 541 - Robotic Computer Interface Controls I

Covers sensors, actuators, mechanical components of robots, kinematics, inverse kinematics, dynamics, and equations of motion.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEC 542 - Robotic Computer Interface Controls II

Covers the robot control problem, including PD, PID, position, force and hybrid controllers, resolved rate and acceleration control, and multiprocessor architecture.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECES 641 Minimum Grade: C and ECES 643 Minimum

Grade: C and ECEC 541 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEC 543 - Robotic Computer Interface Controls III

Covers non-linear control techniques, FLDT, and advanced topics.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEC 542 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEC 600 - Fundamentals of Computer Networks

Fundamentals design principles of ATM, Internet and local area networks; protocol layers and the Internet Architecture; medium access protocols; application protocols and TCP/IP utilities; basic principles and virtual circuit switching; naming and addressing; flow and congestion control protocols; routing algorithms; Quality-of-Service in computer networks; security issues in networks.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEC 621 - High Performance Computer Architecture

Maximizing single processor performance. Concepts and techniques for design of computer systems. Processor design, instruction set architecture design and implementation, memory hierarchy, pipeline processors, bus bandwidth, processor/memory interconnections, cache memory, virtual memory, advanced I/O systems, performance evaluation.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEC 622 - Parallel Computer Architecture

Advanced techniques of computer design. Use of parallel processing to achieve high performance levels. Fine and coarse grained parallelism. Multiple CPU parallelism, through multiprocessors, array and vector processors. Dataflow architectures and special purpose processors. Design implications of memory latency and bandwidth limitations. Speedup problems.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEC 621 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEC 623 - Advanced Parallel Computer Architecture

Modern research topics and methods in parallel computer architectures. Parallel algorithms, interconnection networks, SIMD/MIMD machines, processor synchronization, data coherence, dataflow machines, special purpose processors. Select topics in parallel computing.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEC 622 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEC 631 - Principles of Computer Networking

Principles of circuit switching, packet switching and virtual circuits; protocol layering; application layer protocols for e-mail and web applications; naming and addressing; flow control and congestion avoidance with TCP; Internet Protocol (IP); routing algorithms; router architectures; multicast protocols; local area network technologies and protocols; issues in multimedia transmissions; scheduling and policing; Quality-of-Service and emerging Internet service architectures; principles of cryptography.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEC 632 - Performance Analysis of Computer Networks

Covers probability theory and its applications to networks, random variable and random processes; Markov chains, multi-dimensional Markov chains; M/M/1, M/M/m, M/M/m/m, M/G/1 and G/G/1 queueing systems and their applications in computer networks; analysis of networks of queues: Kleinrock Independence Approximation; Time-reversibility and Burke's theorem; Jackson's theorem; the phenomenon of long-range dependence and its implications in network design and traffic engineering.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEC 631 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEC 633 - Advanced Topics in Computer Networking

perspectives in the areas of switch/router architectures, scheduling for best-effort and guaranteed services, QoS mechanisms and architectures, web protocols and applications, network interface design, optical networking, and network economics. The course also includes a research project in computer networking involving literature survey, critical analysis, and finally, an original and novel research contribution.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEC 631 Minimum Grade: C and ECEC 632 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEC 654 - Knowledge Engineering I

Covers conceptual modeling, including an overview of knowledge representation. Includes semantic networks, reduced semantic networks, logic of incomplete knowledge bases, extensional semantic networks, and applications of conceptual models.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEC 655 - Knowledge Engineering II

Covers expert systems, including language and tools of knowledge engineering. Includes reasoning about reasoning, design and evaluation, heuristics in expert systems, expert systems for decision support, and expert systems in conceptual design.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEC 654 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEC 656 - Knowledge Engineering III

Covers information-intensive systems, including information representation in autonomous systems. Includes clauses and their validation; clustering in linguistic structures; linguistic and pictorial knowledge bases; discovery in mathematics, including am; and methods of new knowledge generation.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEC 655 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEC 661 - VLSI Design

Covers CMOS design styles, techniques, and performance; VLSI computer hardware, arithmetic units, and signal processing systems; and cat tools for layout design and simulation.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEC 662 - VLSI Array Processors I

Covers VLSI testing, including design for testability and parallel computer architectures; signal and image processing algorithms and mapping algorithms onto array structures; and systolic array processors.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEC 661 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEC 663 - VLSI Array Processors II

Covers wavefront array processors; matching hardware to arrays; hardware design, systems design, and fault-tolerant design; and implementations and VLSI design projects.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEC 662 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEC 671 - Electronic Design Automation for VLSI Circuits I

This course focuses on the electronic design automation problems in the design process of VLSI integrated circuits. In this first quarter of the course, algorithms, techniques and heuristics structuring the foundations of contemporary VLSI CAD tools are presented. Boolean algebra, graph theory, logic minimization and satisfiability topics are presented.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEC 672 - Electronic Design Automation for VLSI Circuits II

This course focuses on the electronic design automation problems in the design process of VLSI integrated circuits. In this second quarter of the course, physical VLSI design steps of technology mapping, floor planning, placement, routing and timing and presented individual and team-based small-to-medium scale programming projects are assigned.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEC 671 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEC 673 - Deep Sub-Micron Integrated Circuit Design

This course focuses on the design challenges of digital VLSI integrated circuits in deep sub-micron manufacturing technologies. Automation challenges and high-performance circuit design techniques such as low-power and variation-aware design are presented. The course material is delivered in a lecture format structured on recent presentations, articles, and tutorials.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEC 671 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEC 690 - Special Topics Computer Engineering

Covers special topics of interest to students and faculty.

Credits: 9.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEC 697 - Research in Computer Engineering

Research in computer engineering.

Credits: 9.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEC 699 - Supervised Study in Computer Engineering

Supervised study in computer engineering.

Credits: 9.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEC 891 - Advanced Topics in Computer Engineering

Advanced topics in computer engineering.

Credits: .50 to 9.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEC 898 - Master's Thesis in Computer Engineering

Master's thesis in computer engineering.

Credits: 9.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEC 997 - Dissertation Research in Computer Engineering

Credits: 1.00 to 12.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEC 998 - PhD Dissertation in Computer Engineering

Ph.D. dissertation in computer engineering.

Credits: 1.00 to 12.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

Electrical & Computer Engineering: Electrophysics Courses

ECEE 501 - Physical Principles of Electrical Engineering I

Core course. Covers classical mechanics, including generalized coordinates, Lagrangian and Hamiltonian formulation, and variational principle. Introduces quantum mechanics, including Schrodinger equation, wave functions, operators, expectation values, and hydrogen atom.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEE 502 - Physical Principles of Electrical Engineering II

Core course. Continues ECEE 501. Covers atomic orbitals, angular momentum, oscillators, time-independent and time-dependent perturbation theories, many-particle wave functions, and optical transitions. Also covers statistical mechanics, including distributions, ensembles, and thermal properties of solids.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEE 501 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEE 507 - Electromagnetic Field Analysis I

Core course. Covers Maxwell's equations; solutions of Laplace's equation, Green's function, and scalar and vector potentials; energy and momentum in electromagnetic fields; and interaction of fields and material media.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEE 508 - Electromagnetic Field Analysis II

Core course. Continues ECEE 507. Covers em waves, including reflection, refraction, polarization, and dispersion. Includes metallic and dielectric guiding structures, guides, and waveguide circuits and applications to stripline, microstrip, and optical fiber transmission systems.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEE 507 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEE 510 - Scattering & Diffraction of Electromagnetic Waves
Boundary value problems of EM theory. Exact and approximate methods for scattering by spheres, half plane, slit; radar cross-section theory. Quasi-optical theory, scattering, diffraction coefficients. Applications to radio propagation around the earth.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEE 517 - Microwave Networks & Transmission Media

Core course. Atmospheric wave propagation, solution of wave equation without sources in isotropic media, plane-waves, polarization, dispersion surfaces, wave admittance and impedance, wave propagation in free-space and various media, waves at interfaces, solution of wave equation with sources, duality principle, arrays analysis, metallic waveguides, modes in cylindrical waveguides, rectangular and circular, resonant cavities and perturbational methods.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEE 518 - Microwave Passive Components

Core course. V-I and E-H analogy, Kirchoff's Law, Telegrapher's EQ, voltage and current waves, reflection coefficient and impedance relationship, Smith Chart, impedance matching techniques, Bode-Fano theoretical limit, Broadband Quarter-wave Transformer, N-port linear networks, Z, Y, and S parameters, ABCD and T matrices, signal flow-graph and transfer functions, synthesis of two-port and unitary properties, even-odd mode analysis and dual directional couplers (design and synthesis), periodic structures and Floquet modes, filter design and synthesis using insertion loss and image methods, prototype LO filter and transformation to LP, BP, HP, and BS filters, Richards transform and Kuroda identities.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEE 519 - Microwave Active Subsystems

Core course. Overview of physics of P-N junction and Schottky junctions, pin, varactor, and step recovery diodes and their applications, transistors, MESFET and HEMT, BJT and HBT passive microwave circuits: switches, detectors, attenuators, modulators, and phase shifter, active microwave circuits: LNA, power amplifier, distributed amplifier, oscillators (fixed and VCO) power budget and link performance calculations for telecommunication, radar, and EW systems.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEE 520 - Solid-State Electronics

This course familiarizes the students with the fundamental properties of semiconductor materials leading to the students of electronic and photonic devices. Covered topics include: atomic structure, crystal structure, theories of electron conduction, scattering, pn junctions, heterojunctions, metal-semiconductor contacts, and junction devices.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEE 521 - Bipolar and FETs

This is the second course in a sequence of three on electronic and photonic devices. The course covers families of electronic devices. The course covers various families of electronic devices based on silicon and compound semiconductors. Bipolar transistors such as BJTs and HBTs and field-effect devices such as MOSFETs, MESFETs, and MODFETs are studied.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEE 520 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEE 522 - Photonic Devices

Covers fundamentals of absorption, spontaneous, and stimulated emission, photodetectors, light emitting diodes, laser oscillation, semiconductor laser diodes, RIN and phase noise, quantum well lasers, optical receivers, and quantum effect devices.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEE 521 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEE 523 - Integrated Circuits

Covers growth of single-crystal silicon, growth of oxide and epitaxial layers, photolithography, diffusion of impurities, fabrication of bipolar and unipolar integrated circuits, and interconnections and packaging.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEE 521 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEE 525 - Digital IC and CMOS Technology

Covers digital ICs using CMOS technology. Transistor level building blocks, -NOT, NAND, NOR, XOR, OAI, and AOI ? are designed using industry standard CAD tools, e.g. Cadence. Circuit topologies such as CPL, transmission gates are explored. CMOS technology/fabrication and layout are discussed to optimize speed, power, and area.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites:

Repeat Status: Not repeatable for credit

ECEE 526 - Custom VLSI Design

Course covers advanced design styles such as dynamic CMOS circuits, low power circuit concepts, bi-CMOS circuits and the design of VLSI sub-systems. A major category is memory design, both DRAM. VLSI design styles, system integration aspects are discussed. Project design involves a fair amount of layout.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEE 525 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEE 541 - Photonic Systems

Introduction to Optical principles through EM theory. Covers the mathematics of wave motion, as well as the idea of light propagating as particles. The course shows how ray (or geometrical) optics and Gaussian optics are derived from the wave theory. The course also introduces the polarization of light, and how this effects optical propagation.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEE 542 - Optical Applications of Diffraction and Interference

Optical Applications of Diffraction and Interference. This course is an introduction to optical principles through EM theory. Covered topics include wave motion and superposition. Introduction to optical interference, or the interaction of light with itself. Topics include interference and interferometers, diffraction, and Fourier Optics. Diffraction topics include, far (Fraunhofer), near (Fresnel), and the near-near field diffraction. The course includes coding of some of the classical diffraction algorithms for the use in a project.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEE 603 - Cooperative Phenomena

Covers dielectrics, ferroelectrics, diamagnetism, paramagnetism, ferromagnetism, and antiferromagnetism; superconductivity, London's equations, BCS theory, and Josephson effect; and flux quantization, hard superconductors, GLAG theory, flux dynamics, and high-temperature superconductors.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEE 502 Minimum Grade: C and ECEE 503 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEE 607 - Nanoscale Fields

Course covers essentials of electric and magnetic fields, including thermodynamics of polarizable media. Emphasis is on nano-and micro-scale effects like Van der Waals and double layer interactions, plasmon resonance and others. Examples from colloids and other areas of nanotechnology are used to illustrate main ideas.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEE 619 - Radio Frequency Integrated Circuit Design

This course introduces concepts in design of radio frequency (microwave and millimeter wave) integrated circuits. Optimum transistor technologies based on unipolar (MOS, FET, HEMT) and bipolar (BJT, HBT) are discussed for various RFIC applications. Performance of devices and circuits are evaluated in terms of gain, noise, and linearity. Active circuits and systems used in a variety of communications, imaging, and sensing are discussed in terms of standards and applications. IC design projects are integral to this course.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEE 518 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEE 621 - Thin Film Technology I

Covers vacuum technology, plasma processing, VLSI fabrication, and thin film technologies (e.g., plasma etching, thin film deposition, and thin film characterizations).

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEE 622 - Microfabrication Technology

The course provides an overview of basic technological processes typically involved in microfabrication of Micro-Electro-Mechanical Systems (MEMS). The course includes several demonstration laboratories involving basic photolithography, thin film depositions and electroplating.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites:

Repeat Status: Not repeatable for credit

ECEE 623 - Thin Film Technology III

Presents speakers on state-of-the-art practice and future applications of thin film deposition and processing technology.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEE 622 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEE 641 - Fiber Optics & Optical Communications I

Covers propagation in guided and unguided media, including step and graded fibers, dispersion, guide deformations, and mode coupling. Involves design.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEE 642 - Fiber Optics & Optical Communications II

Covers coupling devices, multimode guides, sources, lasers, and radiation patterns. Includes reliability, detectors, circuit models, and noise.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEE 641 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEE 671 - Seminar in Electro-Physics I

Advanced graduate seminar. Focuses on recent developments in microwaves, electro-optics, and solid-state devices.

Credits: 2.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEE 672 - Seminar in Electro-Physics II

Continues ECEE 671.

Credits: 2.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEE 673 - Seminar in Electro-Physics III

Continues ECEE 672.

Credits: 2.00

College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECEE 690 - Special Topics in Electrophysics
Covers special topics of interest to students and faculty.
Credits: 9.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEE 697 - Research in Electrophysics
Research in electrophysics.
Credits: .50 to 9.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEE 699 - Supervised Study in Electrophysics
Supervised study in electrophysics.
Credits: .50 to 9.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEE 811 - Microwave & THZ Photonics I
This course focuses on high speed photonic components for microwave and terahertz fiber-optic links, namely high speed lasers, external modulators and photodetectors.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECEE 812 - Microwave & THZ Photonics II
This course focuses on high speed analog and digital fiber-optic links including loss and dynamic range calculations.

Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECEE 811 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECEE 813 - Microwave & THZ Photonics III
This course focuses on the applications of fiber-optic links; antenna remoting, optically fed and controlled phased array antennas and fiber radio.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECEE 811 Minimum Grade: C and ECEE 812 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECEE 820 - Carrier Transport Fundamentals
This course introduces the fundamentals of carrier transport in semiconductors, beyond the common drift-diffusion description functions and Boltzmann transport equations are covered. Monte Carlo simulations are used for low field and high field transport studies.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECEE 520 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECEE 821 - Nanoelectronics
Focus is on current transport when the size of electronic medium reaches nanometer scales, that is, deBroglie wavelength. Topics include: characteristic lengths, magneto-electric subbands, conductance from transmission, resistance in a ballistic conductor, quantum Hall effect, electron scattering in quantum structures.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECEE 820 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECEE 898 - Masters Thesis in Electrophysics
Master's thesis in electrophysics.

Credits: 9.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEE 997 - Dissertation Research in Electrophysics
Credits: 1.00 to 12.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEE 998 - PhD Dissertation in Electrophysics
Ph.D. dissertation in electrophysics.
Credits: 1.00 to 12.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

Electrical & Computer Engineering: Power Engineering Courses

ECEP 501 - Power System Analysis
Core course. Covers modeling of power systems, including: symmetrical components, transmission lines, transformers, per-unit values and one-line diagrams. Introduces power flow. Required of first-year power majors; equivalent undergraduate credits may be substituted.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECEP 502 - Computer Analysis of Power Systems
Core course. Covers digital computation methods, including load flow, fault, and transient stability problems. Required of first-year power engineering majors.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECEP 501 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECEP 503 - Synchronous Machine Modeling
Core course. Covers two-reaction theory, Park's synchronous machine models, modeling of the synchronous machine excitation and governor systems, and the effects on power system stability. Required of first-year power engineering majors.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECEP 502 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECEP 601 - Modeling & Analysis of Power Distribution Systems
Modeling and Analysis of Power Distribution Systems. Introduction to power distribution system; balanced and unbalanced systems, component and load modeling, radial and weakly meshed topologies; algorithms for unbalanced power flow studies including radial and general structure solver.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Co-Requisites: ECEP 501
Repeat Status: Not repeatable for credit

ECEP 602 - Power Distribution Automation and Control
Power Distribution Automation and Control. Focuses on distribution management systems and their application: including optimizing network operation -capacitor placement and control, network reconfiguration, service restoration. Modern solution technology will be addresses.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Co-Requisites: ECEP 502
Repeat Status: Not repeatable for credit

ECEP 603 - Service and Power Quality in Distribution Systems
Service and Power Quality in Distribution Systems. Focus power distribution systems: service and power quality assessment including stat estimation, voltage quality, trouble call analysis, service restoration, component and system reliability assessment.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECEP 610 - Power System Dynamics

Covers system parameters and dynamics, swing equation and solutions for two-machine and multimachine systems, equal area criterion, computer solution techniques, system effects due to dynamic behavior of particular system components, and load characteristics.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEP 611 - Power System Security

Covers contingency analysis, including operating and security constraints and network sensitivities; corrective dispatch using linear programming; and state estimation, including network observability, detection, and identification of bad data.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEP 612 - Economic Operation of Power Systems

Covers unit characteristics and economic operation, including transmission loss coefficients, general loss formula, and automatic economic load dispatch.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEP 613 - Advanced Power System Design

Covers components, functions, application, and performance; relative cost and scaling parameters; overall planning problem considering present-worth and cost-benefit principles; system reliability; intersystem pooling; and growth.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEP 641 - Protective Relaying

Covers relay principles and types, instrumentation of system parameters, relay characteristics and response, system component protection, solid-state relaying, underfrequency relays, and load shedding.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEP 503 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEP 642 - Protective Relay Laboratory

Covers electromechanical and static relays. Emphasizes application based on observed performance. Includes testing.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEP 641 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEP 643 - Solid State Protective Relaying

Covers solid-state protective relays as applied to power system stability and protection, including comparisons with electromechanical relays.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEP 641 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEP 661 - High Voltage High Power Phenomena

Covers corona, corona losses, electromagnetic noise, dielectric strength, lightning, impulse testing and safety practices, elements of high-power circuit interruption, circuit and physical phenomena, and circuit breakers.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECEP 671 - AC-DC and DC-AC Power Electronic Converters

AC-DC and DC-AC Power Electronic Converters. Study of basic power electronic converter circuits: diode and phase controlled rectifiers and

inverters; switch-mode converters. Applications to DC and AC power supplies.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECEP 501 Minimum Grade: C and ECEP 601 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECEP 672 - Power Electronic Experiments: Hardware and Software Hardware and Software Lab-Intensive course. Additional lectures on: Study of DC-DC switch-mode converters; Study of power electronic circuitry in residential, industrial and electric utility applications; Optimizing utility interfaces with power electronic systems.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECEP 671 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECEP 673 - Power Electronic Applications
Electric Utility Applications with emphasis on DC Transmission, Optimizing the Utility interface. Resonant converters. Fundamentals of motor drives and their controls: induction, DC, synchronous and specialized motors.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECEP 671 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECEP 690 - Special Topics in Power Engineering
Covers special topics of interest to students and faculty.
Credits: 9.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEP 697 - Research in Power Engineering
Research in power engineering.
Credits: .50 to 9.00
College: College of Engineering

Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEP 699 - Supervised Study in Power Engineering
Supervised study in power engineering.
Credits: 9.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEP 801 - Advanced Topics in Power Systems I
Discusses the latest innovations, theories, and methodologies for the design, planning, and operation of power systems. Requires students to read and discuss technical articles published in the IEEE Transactions on pas, the Journal of Electric Energy and Systems, and other publications.
Credits: .50 to 9.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEP 802 - Advanced Topics in Power Systems II
Continues ECEP 801.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECEP 803 - Advanced Topics in Power Systems III
Continues ECEP 802.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECEP 821 - Load Forecasting & Probability Methods
Reviews probability methods. Covers probabilistic generation and load models; forecasting methodologies; load classification and

characterization; energy and peak demand forecasting; weather-and non-weather-sensitive forecast; and annual, monthly, weekly, and daily forecast.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEP 610 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEP 822 - Power System Planning

Covers deterministic planning, including automated transmission system expansion planning and network sensitivities, and probabilistic planning, including generation and load models, generation cost analysis, production costing, and energy production cost models for budgeting and planning.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEP 821 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEP 823 - Power System Reliability

Covers basic reliability concepts, including probabilistic generation and load models, loss of load probability (LOLP), static and spinning generating-capacity reliability, transmission system reliability, and composite system and interconnected system reliability.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECEP 822 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECEP 898 - Master's Thesis Power Engineering

Master's thesis in power engineering.

Credits: 9.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEP 997 - Dissertation Research in Power Engineering

Credits: 1.00 to 12.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECEP 998 - PhD Dissertation in Power Engineering

Ph.D. dissertation in power engineering.

Credits: 1.00 to 12.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

Electrical & Computer Engineering: Systems Courses

ECES 510 - Analytical Methods in Systems

This course is intended to provide graduate student in the field of signal and image processing with the necessary mathematical foundation, which is prevalent in contemporary signal and image processing research and practice.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECES 511 - Fundamentals of Systems I

Core course. Covers linear operators, including forms and properties (differential equations, transfer function, state space, causality, linearity, and time invariance); impulse response, including convolution, transition matrices, fundamental matrix, and linear dynamical system; definition, including properties and classification; representation, including block diagrams, signal flow, and analog and digital; properties, including controllability and observability; and eigenstructure, including eigenvalues and eigenvector and similarity transformations.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECES 512 - Fundamentals of Systems II

Core course. Covers realization and identification, including minimal realization, reducibility and equivalence of models, and identification of systems; stability, including bounded input-bounded output, polynomial roots, and Lyapunov; and feedback compensation and design, including observers and controllers and multi-input/multi-output systems.

Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECES 511 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECES 513 - Fundamentals of Systems III
Core course. Covers multivariable systems, numerical aspects of system analysis and design, design of compensators, elements of robustness, and robust stabilization.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECES 512 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECES 521 - Probability & Random Variables
Probability concepts. Single and multiple random variables. Functions of random variables. Moments and characteristic functions. Random number and hypothesis testing. Maximum likelihood estimation.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECES 522 - Random Process & Spectral Analysis
Random Process. Poisson Process, Shot Noise. Gaussian Process. Matched Filters. Kalman Filters. Power Spectral Density. Autocorrelation and cross correlation. PSD estimation. Entropy. Markov Processes. Queuing Theory.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECES 521 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECES 523 - Detection & Estimation Theory
Detection of signals in noise. Bayes criterion. NP criterion. Binary and M_ary hypotheses. Estimation of signal parameters. MLE and MAP estimation. 1D and 2D signals. ROC Analyses. Decision fusion.
Credits: 3.00
College: College of Engineering

Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECES 521 Minimum Grade: C and ECES 522 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECES 558 - Digital Signal Processing for Sound & Hearing
Introduction to the computational modeling of sound and the human auditory system. Signal processing issues, such as sampling, aliasing, and quantization, are examined from an audio perspective. Covers applications including audio data compression (mp3), sound synthesis, and audio watermarking.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECES 631 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECES 559 - Processing of the Human Voice
Introduction to the computational modeling of the human voice for analysis, synthesis, and recognition. Topics covered include vocal physiology, voice analysis-synthesis, voice data coding (for digital communications, VoIP), speaker identification, speech synthesis, and automatic speech recognition.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECES 631 Minimum Grade: C and ECES 558 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECES 604 - Optimal Estimation & Stochastic Control
Introduction to control system problems with stochastic disturbances; linear state space filtering, Kalman Filtering, Non-linear systems; extended Kalman Filtering. Robust and H-infinity methods.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECES 522 Minimum Grade: C
Repeat Status: Not repeatable for credit
ECES 607 - Estimation Theory
General characteristics of estimators. Estimators: least squares, mean square, minimum variance, maximum a posteriori, maximum likelihood. Numerical solution. Sequential estimators.
Credits: 3.00

College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECES 614 - Passive Network Synthesis
An introduction to approximation theory; driving point functions; realizability by lumped-parameter circuits; positive real functions; properties of two and three element driving point functions and their synthesis; transfer function synthesis; all-pass networks.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECES 623 - Communications III
Covers fundamentals of information theory: information measure, entropy, and channel capacity; source encoding and decoding; rate distortion theory; linear codes; block codes; convolutional codes, Viterbi algorithm; encryption and decryption; and spread spectrum communications.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECES 615 - Analysis & Design of Linear Active Networks
DC and AC models of bipolar transistors and FETs; design of differential operational amplifiers; optimal design of broad-band IC amplifiers; design of tuned amplifiers; design for optimal power gain, distortion, and efficiency; noise in transistor circuits.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECES 631 - Fundamentals of Deterministic Digital Signal Processing
Fundamentals of Deterministic Digital Signal Processing. This course introduces the fundamentals of deterministic signal processing.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECES 621 - Communications I
Covers modulation techniques: baseband PAM, passband PAM, QAM, and PSK; orthogonal signaling: FSK; symbol/vector detection: matched filter and correlation detector; sequence detection: ISI; equalization: adaptive and blind; carrier synchronization; and timing recovery.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECES 632 - Fundamentals of Statistical Digital Signal Processing
Fundamentals of Statistical Deterministic Digital Signal Processing. The course covers topics on statistical signal processing related to data modeling, forecasting and system identification.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECES 631 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECES 622 - Communications II
Covers shot noise, noise in detectors, analog fiberoptic systems, carrier and subcarrier modulation, digital systems bit error rates for NRZ and RZ formats, coherent optical communication systems-heterodyne and homodyne systems, wavelength division multiplexing, system design concepts, power budgets, rise time budgets, and optical switching networks.
Credits: 3.00

ECES 640 - Genomic Signal Processing
This course focuses on signal processing applied to analysis and design of biological systems. This is a growing area of interest with many topics ranging from DNA sequence analysis, to gene prediction, sequence alignment, and bio-inspired signal processing for robust system design.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECES 642 - Optimal Control

This course introduces the Modern Control concepts: linear quadratic performance and practical designs for engineering applications. Topics include: calculus of variations, differential games and H-infinity methods

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECES 512 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECES 643 - Digital Control Systems Analysis & Design

Covers analysis and design of sampled-data control system using Z-transform and state-variable formulation, sampling, data reconstruction and error analysis, stability of linear and non-linear discrete time systems by classical and Lyapunov's second method, compensator design using classical methods (e.g., rootlocus) and computer-aided techniques for online digital controls, optimal control, discrete-time maximum principle, sensitivity analysis, and multirate sampled-data systems.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECES 641 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECES 644 - Computer Control Systems

Introduction to the fundamentals of real-time controlling electromechanical dynamic systems, including modeling, analysis, simulation, stabilization and controller design. Control design approaches include: pole placement, quadratic and robust control performances.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites:

Repeat Status: Not repeatable for credit

ECES 651 - Intelligent Control

Concepts of Intelligence in Engineering Systems, Learning Automation, Principles of Knowledge Representation. Levels of Resolution and Nestedness. Organization of Planning: Axioms and Self-Evident Principles

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites:

Repeat Status: Not repeatable for credit

ECES 660 - Machine Listening and Music IR

This course introduces methods for the computational analysis, recognition, and understanding of sound and music from the acoustic signal. Covered applications include sound detection and recognition, sound source separation, artist and song identification, music similarity determination, and automatic transcription.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECES 631 Minimum Grade: C and ECES 558 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECES 670 - Seminar in Systems I

Involves presentations focused on recent publications and research in systems, including communications, controls, signal processing, robotics, and networks.

Credits: 2.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECES 671 - Seminar in Systems II

Continues ECES 670.

Credits: 2.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECES 672 - Seminar in Systems III

Continues ECES 671.

Credits: 2.00

College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECES 681 - Fundamentals of Computer Vision
Develops the theoretical and algorithmic tool that enables a machine (computer) to analyze, to make inferences about a "scene" from a scene's "manifestations", which are acquired through sensory data (image, or image sequence), and to perform tasks.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECES 682 - Fundamentals of Image Processing
The course introduces the foundation of image processing with hands-on settings. Taught in conjunction with an imaging laboratory.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECES 631 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECES 684 - Imaging Modalities
This course is intended to produce students and image processing with a background on image formation in modalities for non-invasive 3D imaging. The goal is to develop models that lead to qualitative measures of image quality and the dependence of quality imaging system parameters.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECES 685 - Image Reconstruction Algorithms
This course is intended to provide graduate students in signal and image processing with an exposure to the design and evaluation of algorithms for tomographic imaging.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:

Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECES 684 Minimum Grade: C and BMES 621 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECES 690 - Special Topics in Systems Engineering
Covers special topics of interest to students and faculty.
Credits: 9.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECES 697 - Research In Systems Engineering
Research in systems engineering.
Credits: 9.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECES 699 - Supervised Study in Systems Engineering
Supervised study in systems engineering.
Credits: 9.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECES 801 - Advanced Topics in Systems I
Familiarizes students with current research results in their field of interest, specifically in works reported in such journals as The IEEE Transactions.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECES 802 - Advanced Topics in Systems II
Continues ECES 801.
Credits: 3.00
College: College of Engineering

Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECES 803 - Advanced Topics in Systems III
Continues ECES 802.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECES 811 - Optimization Methods for Engineering Design
Applications of mathematical programming and optimization methods in engineering design problems such as networks, control, communication, and power systems optimization. Optimization problem definition in terms of objective function, design variables, and design constraints. Single variable and multivariable search methods for unconstrained and constrained minimization using Fibonacci, gradient, conjugate gradient, Fletcher-Powell methods and penalty function approach. Classical optimization--Lagrange multiplier, Kuhn-Tucker conditions. Emphasis is on developing efficient digital computer algorithms for design
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECES 812 - Mathematical Program Engineering Design
Approximation theory projection theorem. Solution of nonlinear equations by Newton-Raphson method. Resource allocation, linear programming, and network flow problems. Integer programming for digital filter design and power system expansion problems. Gamory's algorithm
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECES 813 - Computer-Aided Network Design
Simulation and circuit analysis programs: PCAP, MIMIC, GASP. Data structures. Algorithms. Languages. Interactive I/O. Integration of subroutines for simulation
Credits: 3.00

College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECES 817 - Non-Linear Control Systems
Non-Linear Systems: analysis, stability and control, Lyapunov stability, singular perturbation methods. Feedback system: Describing Functions, Circle and Popov criteria.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECES 512 Minimum Grade: C and ECES 642 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECES 818 - Machine Learning & Adaptive Control
System identification and parameter estimation, gradient search, least squares and Neural Networks methods. Closed loop implementation of system learning and self-organizing controllers. Random searching learning systems.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECES 512 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECES 821 - Reliable Communications & Coding I
Covers fundamentals of information theory, including measures of communication, channel capacity, coding for discrete sources, converse of coding system, noisy-channel coding, rate distortion theory for memoryless sources and for sources with memory, and universal coding.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Pre-Requisites: ECES 521 Minimum Grade: C and ECES 522 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECES 822 - Reliable Communications & Coding II
Introduces algebra of coding, including groups, rings, fields, and vector fields. Covers finite fields, decoding circuitry, techniques for coding and

decoding, linear codes, error-correction capabilities of linear codes, dual codes and weight distribution, important linear block codes, perfect codes, and Plotkin's and Varshamov's bounds.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECES 821 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECES 823 - Reliable Communications & Coding III

Continues techniques for coding and decoding. Covers convolutional codes; Viterbi algorithm; BCH, cyclic, burst-error-correcting, Reed-Solomon, and Reed-Muller codes; and elements of cryptography.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECES 822 Minimum Grade: C

Repeat Status: Not repeatable for credit

ECES 898 - Master's Thesis in Systems Engineering

Master's thesis in systems engineering.

Credits: 9.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECES 921 - Reliable Communications & Coding I

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECES 997 - Dissertation Research in Systems Engineering

Credits: 1.00 to 12.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

ECES 998 - PhD Dissertation in Systems Engineering

Ph.D. dissertation in systems engineering.

Credits: 1.00 to 12.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

Electrical & Computer Engineering Courses

ECE 501 - Topics in Circuits and Systems

Circuit laws, transfer functions, convolution, transform techniques, systems engineering. This series of courses may be used to meet the admission prerequisites to ECE graduate program. One credit per term is creditable to the M.S.E.E. degree.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECE 502 - Topics In Communications, Controls and Computers

Modulation theory, noise, feedback theory, stability, computer engineering fundamentals, computers in communication and controls. This series of courses may be used to meet the admission prerequisites to the ECE graduate program. One credit per term is creditable to the M.S.E.E. degree.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECE 503 - Topics in Mathematical Techniques In ECE

Complex variables in communication and control, matrix methods in circuits and systems, vector calculus in fields, two-dimensional image processing. This series of courses may be used to meet the admission prerequisites to the ECE graduate program. One credit per term is creditable to the M.S.E.E. degree

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ECE 571 - Introduction to ECE Research
Topics of departmental research. Thesis selection. Required of all full-time graduate students
Credits:
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

Covers origin and engineering properties of earth materials; engineering testing, alteration, and use of earth materials; and special geologic hazards and problems.
Credits: 3.00
College: College of Engineering
Department: Engineering Geology
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Repeat Status: Not repeatable for credit

ECE 572 - Techniques of E.C.E. Research
Techniques for making technical presentations: oral and written modes. Meeting organization, audience awareness. Writer-to-reader communication. Required of all full-time graduate students.
Credits:
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

EGEO 650 - Rock Mechanics
Involves field and laboratory evaluation of rock properties, stress analysis and measurement, stability of rock masses, design of underground openings, and permeability and seepage in jointed rock.
Credits: 3.00
College: College of Engineering
Department: Engineering Geology
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Pre-Requisites: EGEO 630 Minimum Grade: C
Repeat Status: Not repeatable for credit

ECE 573 - Presentation Of E.C.E Research
Conference attendance and critique. Student presentation and critique. Topics of concern: professional ethics, liability, etc. Required of all full-time graduate students.
Credits:
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

EGEO 700 - Introduction to Hydrology
Covers climate and weather, precipitation, evaporation and transpiration, drainage basins, and hydrographs.
Credits: 3.00
College: College of Engineering
Department: Engineering Geology
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Repeat Status: Not repeatable for credit

Engineering Geology Courses

EGEO 620 - Structural Geology
Covers basic principles of structural geology, including deformation and failure of the earth's crust; folded and faulted structures; orthogonal and stereographic solutions of structural geology problems; construction and interpretation of geologic maps, cross-sections, and block diagrams; and subsurface mapping and graphic presentation of subsurface data.
Credits: 3.00
College: College of Engineering
Department: Engineering Geology
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Repeat Status: Not repeatable for credit

EGEO 701 - Hydrology-Ground Water
Covers geologic and hydrologic occurrence of groundwater, underground flow, groundwater supply, and pollution problems.
Credits: 3.00
College: College of Engineering
Department: Engineering Geology
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Repeat Status: Not repeatable for credit

EGEO 630 - Engineering Geology

EGEO 710 - Introduction to Geophysics
Applies geophysical techniques to the problems of the earth's planetary structure, local subsurface conditions, and mineral prospecting. Examines the principles of geophysical measurement and interpretation, with emphasis on gravity measurement, isostasy, geomagnetism, earthquake seismology, seismic refraction and reflection, and electrical prospecting.
Credits: 3.00

College: College of Engineering
Department: Engineering Geology
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Repeat Status: Not repeatable for credit

Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Repeat Status: Course can be repeated 98 time(s) for 998.00 credit(s)

Engineering Management Courses

EGEO 750 - Hydrology-Stream Flow
Covers precipitation, runoff, evaporation and transpiration, stream flow, flood flow, and minimum flow. Pays special attention to factors affecting water supply and quality.
Credits: 3.00
College: College of Engineering
Department: Engineering Geology
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Pre-Requisites: EGEO 700 Minimum Grade: C
Repeat Status: Not repeatable for credit

EGMT 501 - Engineering Management I
Covers the principles and practices of administration of engineering and science activities, including nature of management, organization, planning, controlling action and measuring results, management of human resources, communication, and decision-making.
Credits: 3.00
College: College of Engineering
Department: Engineering Management
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

EGEO 790 - Special Topics
Covers topics of interest in the field of engineering geology.
Credits: .50 to 9.00
College: College of Engineering
Department: Engineering Geology
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

EGMT 502 - Engineering Management II
Covers principles and procedures of creative problem-solving, including the use of brainstorming sessions and a step-by-step formulation of the practical techniques by which creative imagination can be more productively utilized. Pays special attention to the development of professional creativity habits through formulating basic plans, investigating directions, developing methods, and optimizing and completing solutions.
Credits: 3.00
College: College of Engineering
Department: Engineering Management
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: EGMT 501 Minimum Grade: C
Repeat Status: Not repeatable for credit

EGEO 799 - Independent Study
Credits: .50 to 9.00
College: College of Engineering
Department: Engineering Geology
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

EGMT 504 - Communications
Provides a thorough review of the essentials of usage and a study of methods of organization and style of both written and spoken communication. Pays special attention to the communication demands of engineers.
Credits: 3.00
College: College of Engineering
Department: Engineering Management
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

EGEO 898 - Master's Thesis
Credits: .50 to 20.00
College: College of Engineering
Department: Engineering Geology
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Repeat Status: Course can be repeated 98 time(s)

EGMT 504 - Communications
Provides a thorough review of the essentials of usage and a study of methods of organization and style of both written and spoken communication. Pays special attention to the communication demands of engineers.
Credits: 3.00
College: College of Engineering
Department: Engineering Management
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

EGEO 998 - Ph.D. Dissertation
Credits: 1.00 to 12.00
College: College of Engineering
Department: Engineering Geology

EGMT 515 - Infrastructure Systems & Performance Evaluation
Characterization of transportation, building, urban water resources and power distribution infrastructure. Capacity, functional performance and serviceability metrics. Risk and vulnerability concepts. Physical

deterioration mechanisms. Asset management principles. Data management supporting scoping and sequencing of facility maintenance, repair, upgrading, interconnection, expansion or replacement.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following College(s)/School(s):

College of Engineering

Repeat Status: Not repeatable for credit

EGMT 516 - Infrastructure Project & Program Planning

Coordination of infrastructure systems with multiple integrated projects through concept development, regulatory, environmental and economic screening, and then through design, construction, commissioning, operation and maintenance. Includes definition of program objectives and geographic limits; assessing asset conditions; sustainability and stakeholder analysis, team assembly and governance; defining performance and status reporting metrics.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following College(s)/School(s):

College of Engineering

Pre-Requisites: EGMT 501 Minimum Grade: C

Repeat Status: Not repeatable for credit

EGMT 517 - Public Value & Participation in Infrastructure Decision
Adjusting sponsoring agency plans and program for external statutory and informal inputs, including regulatory approvals, environmental assessment, interested and affected party stakeholder concerns, life cycle sustainability, and resource allocation. Includes communication of and transparent ratification of tradeoffs in expectations of project performance and reliability.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following College(s)/School(s):

College of Engineering

Pre-Requisites: EGMT 516 Minimum Grade: C

Repeat Status: Not repeatable for credit

EGMT 520 - Infrastructure Capstone Project

Group project to produce an engineering-intensive submission for approval by a regulatory agency, addressing compliance with regulatory, codes and professional standards and resource requirements. The student team, with diverse backgrounds, will

prepare and present the report to the designated entity, following the procedures and protocols that it has published.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Pre-Requisites: EGMT 501 Minimum Grade: C and EGMT 515 Minimum

Grade: C and EGMT 516 Minimum Grade: C

Repeat Status: Not repeatable for credit

EGMT 531 - Economics for Engineering Management

Provides a review of economic analysis, with emphasis on those phases of major interest to engineering administration. Covers the calculation of economic equivalence, inflation and the purchasing power of money, decision-making among alternatives, evaluation of public activities, and estimation of costs.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

EGMT 535 - Financial Management I

Studies the features of accounting data essential to the interpretation and evaluation of engineering operations and financial position of the engineering enterprise. Analyzes financial statements and reports from the point of view of management.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: EGMT 531 Minimum Grade: C

Repeat Status: Not repeatable for credit

EGMT 536 - Financial Management II

Covers advanced problems in planning, controlling, and directing engineering and other operating costs through budgeting and analysis of cost data. Studies judging of profitability, liquidity, and the organizational structure of the engineering functions.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: EGMT 535 Minimum Grade: C and EGMT 531 Minimum Grade: C

Repeat Status: Not repeatable for credit

EGMT 537 - Problems In Engineering Administration

Uses the case method to provide a thorough study of engineering management and administrative procedures in recognizing and solving engineering problems. Emphasizes strategic planning and policy decisions that affect the image and success of the whole organization in its domestic and global environments.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: EGMT 501 Minimum Grade: C (May be taken concurrently) and EGMT 502 Minimum Grade: C (May be taken concurrently) and EGMT 531 Minimum Grade: C (May be taken concurrently) and EGMT 535 Minimum Grade: C (May be taken concurrently) and EGMT 536 Minimum Grade: C (May be taken concurrently)

Repeat Status: Not repeatable for credit

EGMT 571 - Managerial Statistics I

Covers probability, including random variables and probability distributions, mathematical expectation, discrete probability distributions, continuous probability distributions, sampling and sampling distribution, and estimators and confidence intervals. Includes applications to engineering and industrial problems.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

EGMT 572 - Managerial Statistics II

Continues EGMT 571. Covers hypothesis testing, linear regression and correlation, multiple regression, and some topics from analysis of variance and non-parametric statistics. Introduces quality control.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: EGMT 571 Minimum Grade: C

Repeat Status: Not repeatable for credit

EGMT 573 - Operations Research I

Covers deterministic modeling, including linear programming; the Simplex Method; theory of the Simplex Method; duality and sensitivity analysis; transportation, transshipment, and assignment problems; problem formulation; goal programming; network analysis; dynamic programming; and integer and non-linear programming. Discusses case study applications of engineering and management problems.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: EGMT 572 Minimum Grade: C

Repeat Status: Not repeatable for credit

EGMT 574 - Operations Research II

Continues EGMT 573. Concentrates on probabilistic modeling, including Markov chains, queuing theory and applications, inventory theory, forecasting, and decision analysis and simulation. Discusses case study applications of engineering and management problems.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: EGMT 573 Minimum Grade: C and EGMT 572 Minimum

Grade: C and EGMT 571 Minimum Grade: C

Repeat Status: Not repeatable for credit

EGMT 581 - Problems in Human Relations

Covers morale and discipline in management situations. Includes case studies stressing the prevention of and solution to employee problems by means of appropriate policies, techniques, practices, and procedures. Examines group dynamics from the point of view of both psychological and sociological factors under varying situations, especially industrial.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

EGMT 605 - Research & Development Management I

Analyzes the issues and concepts involved in strategic and corporate development planning in the modern technologically oriented company. Pays particular attention to the fundamentals of corporate planning as they relate to the research and development product planning of the corporation. Includes some case studies. May be taken independently of EGMT 606.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

EGMT 606 - Research & Development Management II

Analyzes the issues and concepts involved in the management of research and development and its functional relationship to other

elements of the corporate structure. Pays particular attention to the functional characteristics of the product line, company growth by technological innovation, application of systems engineering concepts to the corporate organization, and changing concepts in management structures to accommodate advances in science and technology. May be taken independently of EGMT 605.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

EGMT 607 - Marketing for Engineers

Focuses on the marketing of engineering services and engineered products to industrial and governmental customers. Explores the interdependence of engineering marketing, manufacturing, and finance through strategic business planning. Covers industrial and government procurement, sales techniques, costs, pricing, marketing research, proposal preparation, and client relationships.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: EGMT 501 Minimum Grade: C and EGMT 531 Minimum Grade: C

Repeat Status: Not repeatable for credit

EGMT 610 - Engineering Ethics & Business Practices for Engineers

Course will raise level of awareness and sensitivity of and teach how to create a workplace valuing ethical behavior and business conduct. Discusses engineering ethics, how to establish and administer an effective corporate compliance program, case studies and application of the case method, ethical implications of business practice issues in the workplace.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following College(s)/School(s):

College of Engineering

Repeat Status: Not repeatable for credit

EGMT 620 - Project Management for Engineers

This course provides a comprehensive treatment of project management by examining concepts, theories and applications. Emphasis is placed on planning and control for technology based organizations. Upon successful completion of course, students should be able to use the tools and concepts in project management.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: EGMT 501 Minimum Grade: C and EGMT 531 Minimum Grade: C

Repeat Status: Not repeatable for credit

EGMT 625 - Project Planning and Control

This course provides a basic understanding of project planning and control by examining concepts and theories. Emphasis is placed on planning and control of technology based organizations. Upon successful completion of this course, students should be able to use the tools and concepts of project control and apply them.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: EGMT 572 Minimum Grade: C and EGMT 573 Minimum Grade: C

Repeat Status: Not repeatable for credit

EGMT 630 - Global Engineering Project Management

This course will focus on strategies and techniques needed for managing a global project in an engineering environment. Develop concepts of leadership for diverse global teams comm. strategies, cultural considerations, organizational structure, collaborative tools & techniques, risk mitigation and contracting strategies, legal and financial issues when executing a global engineering project. Highlight techniques used in design/construction, production, development and technology transfer projects. Essential in today's environment of global competition.

Credits: 3.00

College: College of Engineering

Department: Office of Dean of COE

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following College(s)/School(s):

College of Engineering

Must be enrolled in one of the following Major(s):

Engineering Management

Repeat Status: Not repeatable for credit

EGMT 635 - Visual System Mapping

Visual System Mapping (VSM) through whole-brain thinking is a powerful technique based on more than 40 years of research. VSM was inspired by a technique known as "Mindmapping", which is the technique developed by Tony Buzan in the late 1960's, designed to lead to enhanced creativity and better results in technology based organizations.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: EGMT 501 Minimum Grade: C and EGMT 502 Minimum Grade: C

Repeat Status: Not repeatable for credit

EGMT 650 - Systems Engineering Leadership

Course will explore concepts related to effective leadership within practice of systems engineering. Equips practicing engineers to move beyond engineering training focus on algorithms and analysis and develop a broad understanding of leadership effectiveness in a technically oriented work place. Course will include models related to sustainable, high performance and topics related to living, learning, effectiveness, power, influence, networking, and systems thinking. Emphasis on developing systems thinking.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following Major(s):

Engineering Management

Repeat Status: Not repeatable for credit

EGMT 652 - Engineering Law

Examines the influence of contract, tort, and property law on engineering and construction activities. Includes legal principles relating to management of engineering organizations and governmental departments, and legal procedures of interest to engineers. Covers contracts, professional malpractice, expert testimony, intellectual property law, and business organizations.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

EGMT 660 - Sustainable Business Practices for Engineers

The course will give students a broad and practical understanding of various environmental issues as well as sustainability concepts. The challenges associated with sustainable development are multifaceted involving economic, social and environmental concerns. These concerns are altering business strategies and practices and are leading to new opportunities.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: EGMT 501 Minimum Grade: C

Repeat Status: Not repeatable for credit

EGMT 680 - Special Topics in Engineering Management

Covers selected advanced-level topics in the field of engineering management. Specific topics for each term will be announced prior to registration

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

EGMT 685 - Systems Engineering Management

Course teaches the art of systems engineering. Students will learn SE processes and skills to integrate user needs, manage requirements, conduct technological evaluation and build elaborate system architecture, to assess risk, establish financial and schedule constraints. Course provides pedagogically sound approach to the subject matter.

Any graduate students involved with new product development, technology development and/or integration will find this course useful.

Credits: 3.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following Major(s):

Engineering Management

Repeat Status: Not repeatable for credit

EGMT 699 - Independent Study

Credits: .50 to 9.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

EGMT 799 - Research

Involves the selection and solution of a problem in the field of engineering management. Expects students to conduct independent research and demonstrate the ability to employ one or more of the managerial tools to which they were exposed. Emphasizes the composition and organization of the paper, the logical development of a solution to the problem, and the contribution of the solution to knowledge

Credits: .50 to 20.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

EGMT 898 - Master's Thesis

Involves the study and investigation of a research or development problem in the area of the student's major elective. Requires the problem to be reported in a dissertation under the direction of a faculty adviser. No credit will be granted until thesis is completed and approved

Credits: .50 to 20.00

College: College of Engineering

Department: Engineering Management

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

Engineering, General Courses

ENGR 701 - Career Integrated Education

Industrial and practical training for engineers

Credits: 3.00

College: College of Engineering

Department: Office of Dean of COE

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ENGR 702 - Career Integrated Education II

Credits: 3.00

College: College of Engineering

Department: Office of Dean of COE

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 98 time(s)

Environmental Engineering Courses

ENVE 529 - Environmental Noise

Covers the fundamentals of acoustic propagation, instrumentation, noise descriptors, hearing damage and other health effects, occupational noise, noise abatement techniques, modeling the noise near highways and airports, and EPA strategy for reducing environmental noise exposure.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ENVE 534 - Industrial Ventilation

Covers principles of air movement related to ventilation and air-conditioning facilities for the maintenance of suitable environmental conditions in work areas. Includes principles of industrial processes and air pollution abatement equipment, including air flow, ducts, fans, motors, and hoods.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ENVE 535 - Industrial Safety

Examines the impact of accidents, liability considerations, legislation and regulation of safety, osha codes and standards, hazards and their analysis and control, risk assessment, major types of accidents and their impacts, and accident investigation.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ENVE 546 - Solid Waste Systems

Analyzes the public health, economic, and political aspects in the operation and design of storage, collection, and disposal of solid waste materials.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ENVE 555 - Geographic Information Systems

The course provides grounding in fundamental principles of GIS, and achieves understanding through hands on practical laboratories.

Course topics include: spatial reference systems, geographic data theory and structures, structures, spatial analysis tools, functions and algorithms, GIS data sources, compilation and quality, and GIS project design and planning.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ENVE 560 - Fundamentals of Air Pollution Control

Fundamental topics with regard to the formation and control of air pollutants are studied. This course provides strong foundation for engineers who will be involved in the development of engineering solutions for industrial air pollution prevention and design, development or selection of air pollution control devices and systems.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

May not be enrolled in one of the following Program Level(s):

Continuing Education

Repeat Status: Not repeatable for credit

ENVE 602 - Water Quality Control Lab

Introduces analytical procedures in the assessment of water quality as applied to the analysis of natural waters and wastewaters, and to the control of water and waste treatment processes.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ENVR 501 Minimum Grade: C

Repeat Status: Not repeatable for credit

ENVE 603 - Hazardous Waste Analysis Lab

Introduces methods of sampling and analysis of hazardous environmental pollutants. Emphasizes inorganic and organic pollutants found at hazardous waste disposal sites. Includes application of leachability and extraction tests.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ENVR 501 Minimum Grade: C

Repeat Status: Not repeatable for credit

ENVE 604 - Solid Waste Analysis

Uses chemical and physical techniques to analyze the composition of solid waste material. Emphasizes combustible, organic, and toxic fractions of solid wastes.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ENVR 501 Minimum Grade: C

Repeat Status: Not repeatable for credit

ENVE 607 - Environmental Systems Analysis

Surveys system concepts, theories, and analytical techniques, and their application to urban and environmental problems.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

ENVE 642 - Control of Gas and Vapor Pollutants From Industrial and Mobile Sources

In this course, students will learn how different physical and chemical mechanisms can be used to prevent, separate, recover or destroy the gas/vapor air pollutants. The control mechanisms are studied in detail. Students then learn how to apply those mechanisms in the design of conventional, or new, devices and systems for control of gas/vapor air pollutants.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

May not be enrolled in one of the following Program Level(s):

Continuing Education

Must be enrolled in one of the following College(s)/School(s):

College of Engineering

Must have the following Classification(s):

Masters Program

PhD Program

Senior

Pre-Requisites: ENVE 460 Minimum Grade: D

Repeat Status: Not repeatable for credit

ENVE 644 - Design of Particulate Control Devices

Students will learn how different mechanisms can control characteristics, formation, transport, separation and destruction of airborne particulate pollutants. Students learn how to apply the studied material in the first part of this course to design conventional or new devices and systems for control of particulate air pollutants.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

May not be enrolled in one of the following Program Level(s):

Continuing Education

Pre-Requisites: ENVE 460 Minimum Grade: D

Repeat Status: Not repeatable for credit

ENVE 646 - Advanced Solid Waste Systems

Introduces and analyzes the newest advances in solid waste technology, with an emphasis on design, treatment, and processing techniques.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ENVR 501 Minimum Grade: C and ENVR 546 Minimum Grade: C and ENVR 636 Minimum Grade: C
Repeat Status: Not repeatable for credit

ENVE 657 - Incineration
Covers destruction of solid and liquid hazardous wastes at high temperature in a combustion device, including requirements for destruction of toxic materials and control of discharges to the atmosphere.
Credits: 3.00
College: College of Engineering
Department: Environmental Engineering
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ENVR 501 Minimum Grade: C
Repeat Status: Not repeatable for credit
ENVE 660 - Chemical Kinetics in Environmental Engineering
Covers chemical and biological kinetics, mass-transfer considerations and hydraulic regimes in water and wastewater treatment, and water quality management. Includes absorption and stripping of gases and volatile organics and applications to aeration and ozonation processes.
Credits: 3.00
College: College of Engineering
Department: Environmental Engineering
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ENVR 501 Minimum Grade: C or ENVE 501 Minimum Grade: C and ENVR 506 Minimum Grade: C
Repeat Status: Not repeatable for credit

ENVE 661 - Env Engr Op-Chem & Phys
Provides a theoretical study of the chemical and physical unit operations of environmental engineering, including sedimentation, coagulation, precipitation, adsorption, oxidation-reduction, ion exchange, disinfection, membrane processes, and filtration.
Credits: 3.00
College: College of Engineering
Department: Environmental Engineering
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ENVE 660 Minimum Grade: C
Repeat Status: Not repeatable for credit

ENVE 662 - Enviro Engr Unit Oper-Bio
Provides a systematic study of the microbiological and biochemical processes for the treatment of aqueous and solid wastes, including aerobic and anaerobic processes and composting.
Credits: 3.00
College: College of Engineering

Department: Environmental Engineering
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ENVR 516 Minimum Grade: C and ENVE 660 Minimum Grade: C
Repeat Status: Not repeatable for credit

ENVE 665 - Hazardous Waste & Groundwater Treatment
Covers principles of hazardous waste and groundwater treatment and in situ technologies. Presents application of processes, including solvent extraction, steam and air stripping, adsorption, ion exchange, oxidation, dechlorination, stabilization, wet air and supercritical oxidation, incineration, soil washing, and soil vapor extraction.
Credits: 3.00
College: College of Engineering
Department: Environmental Engineering
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ENVR 660 Minimum Grade: C
Repeat Status: Not repeatable for credit
ENVE 681 - Groundwater Hydrology
This course covers the effects of natural spatially-and temporally-varying hydrologic and geologic processes on groundwater flow and solute transport in aquifers. Covered are concepts and applications of geostatics, spectral techniques, and Monte Carlo simulations to subsurface hydrologic processes. Comparisons are made of recent theoretical developments to field data from research sites in North America.
Credits: 3.00
College: College of Engineering
Department: Environmental Engineering
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Repeat Status: Not repeatable for credit

ENVE 682 - Subsurface Contaminant Transport
This course covers principles governing contaminant movement in aquifers. It includes advection, dispersion, reactive transport, microbial and colloidal transport, matrix diffusion, density-coupled transport, and multiphase flow. It also emphasizes field-scale applications.
Credits: 3.00
College: College of Engineering
Department: Environmental Engineering
Restrictions:
May not be enrolled in one of the following Program Level(s):
Continuing Education
Pre-Requisites: ENVE 681 Minimum Grade: C
Repeat Status: Not repeatable for credit

ENVE 683 - Stochastic Subsurface Hydrology
Credits: 3.00
College: College of Engineering
Department: Environmental Engineering

Restrictions:

May not be enrolled in one of the following Program Level(s):
Continuing Education
Pre-Requisites: ENVE 682 Minimum Grade: C
Repeat Status: Not repeatable for credit

ENVE 684 - Water Resource Systems Analysis

This course covers mathematical optimization techniques as applied to water resource systems. Example applications include water supply management, irrigation planning and operation, water quality management and ground water management.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

May not be enrolled in one of the following Program Level(s):
Continuing Education
Repeat Status: Not repeatable for credit

ENVE 702 - Adv Enviro Instrumentatn

Uses instrumental analysis to assess environmental quality.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ENVR 602 Minimum Grade: C and ENVR 604 Minimum Grade: C
Repeat Status: Not repeatable for credit

ENVE 726 - Environmental Assessment

Examines the National Environmental Policy Act of 1969 and its implementation according to the regulations of the Council on Environmental Quality. Discusses air, water, noise, biological, cultural, and socioeconomic impacts. Includes methods of impact analysis and means to compare alternative actions.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ENVE 727 - Risk Assessment

Covers quantitative relations between environmental exposures and effects. Includes computer methods for risk analysis and development of environmental guidelines and standards.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ENVR 501 Minimum Grade: C or ENVE 501 Minimum Grade: C and ENVR 506 Minimum Grade: C
Repeat Status: Not repeatable for credit

ENVE 750 - Data-based Engineering Modeling

This course covers empirical methods to understand and model engineering systems. Students will learn to develop evaluate statistical models and use three common statistical software packages, Excel, SPSS, and R.

Credits: 3.00

College: College of Engineering

Department: Civil, Arch, & Environ Engr

Restrictions:

May not have the following Classification(s):
Freshman
Junior
Pre-Junior
Sophomore

Pre-Requisites: ENGR 361 Minimum Grade: D or CHE 335 Minimum Grade: D or MEM 361 Minimum Grade: D or MATH 311 Minimum Grade: D

Repeat Status: Not repeatable for credit

ENVE 761 - Enviro Engr Unit Oper Lab

Covers application of unit operations including filtration, adsorption, oxidation, coagulation, and biodegradation to the treatment of potable water, wastewater, and hazardous waste.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):
Graduate Quarter

Pre-Requisites: ENVR 661 Minimum Grade: C and ENVR 662 Minimum Grade: C

Repeat Status: Not repeatable for credit

ENVE 766 - Waste Wtr Treat Plant Des

Covers application of principles of environmental engineering unit operations to the treatment of municipal, industrial, and hazardous wastes by biological, physical, and chemical means. Includes applications of computers to the design process.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):
Graduate Quarter

Pre-Requisites: ENVR 662 Minimum Grade: C and ENVR 751 Minimum Grade: C

Repeat Status: Not repeatable for credit

ENVE 767 - Surface Water Mixing Processes

This course covers the hydrodynamic mixing and transport processes in free-surface flows. Basic mixing processes including molecular

diffusion, turbulent diffusion and dispersion are also covered. Emphasis will be on the solution of the advection-diffusion equation with various boundary conditions. Additional topics include boundary exchanges, non-ideal mixing in rivers, and analysis of jets and plumes.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

May not be enrolled in one of the following Program Level(s):

Continuing Education

Must be enrolled in one of the following Major(s):

Civil Engineering

Environmental Engineering

Pre-Requisites: CIVE 664 Minimum Grade: C

Repeat Status: Not repeatable for credit

ENVE 768 - Sediment & Contaminant Transport

This course covers the transport of sediments and reactive solutes in surface waters as well as the classic theory for bed-load and suspended sediment transport. The interplay of stream flow, frictional resistance, and sediment transport is also covered. The biogeochemical processes that influence contaminant mobility and the integration of physical and chemical processes in contaminant transport models are also discussed.

Credits: 3.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following Major(s):

Civil Engineering

Environmental Engineering

Pre-Requisites: CIVE 767 Minimum Grade: C or ENVE 767 Minimum Grade: C

Repeat Status: Not repeatable for credit

ENVE 865 - Spec Topics Env'r Engineering

Credits: 12.00

College: College of Engineering

Department: Environmental Engineering

Restrictions:

May not be enrolled in one of the following Program Level(s):

Continuing Education

Repeat Status: Course can be repeated 98 time(s)

Materials Engineering Courses

MATE 500 - Struct & Props Of Metals

Covers crystallography, crystal defects, dislocation mechanisms, phase transformations, recovery and recrystallization, diffusional processes, and strengthening mechanisms.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 501 - Struct & Props Polymers

Covers step and free radical polymers, copolymerization, molecular weight characteristics, polymer morphology, thermodynamics, viscoelasticity, yielding and crazing, and Boltzmann and T-T superpositions.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 502 - Ceram & Electronic Matls

Covers bonding; crystal structure; defects; diffusion; electrical conductivity; and mechanical, electrical, dielectric, magnetic, and thermal properties.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 505 - Phase Equilibria

Covers thermodynamic concepts of phase equilibria, including unary, binary, and ternary systems; pressure effects; and relationships between phase diagrams and structure.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 506 - Diffusion

Covers atomic migration in solids, self-diffusion, concentration gradients, mathematical analysis of diffusion, and applications of numerical methods.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 507 - Kinetics

Covers nucleation phenomena in homogeneous and heterogeneous metallic and ceramic systems, strain energy analysis, composition fluctuation analysis, growth and solution kinetics of second phases, coarsening processes, martensitic transformations, and crystallization of glass.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 510 - Thermodynamics of Solids

Covers classical thermodynamics, introduction to statistical mechanics, solution theory, thermodynamics of interfaces and crystal defects, and phase diagrams and reaction equilibrium.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 515 - Exper Technq In Matls

Covers electron microscopy techniques, scanning transmission and Auger analysis, x-ray diffraction, x-ray wavelength dispersive and energy dispersive analysis, thermal analysis, statistics and error analysis, and design of experiments.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 525 - Intro Composite Materials

Covers classification and definition of composite materials; properties of fibers, matrices, and their interfaces; structural geometry of reinforcing materials; formation and testing of composites; and properties and analysis of composite materials.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 530 - Solidification Processing I

Covers principles of solidification processing, heat flow during solidification, thermodynamics and kinetics of nucleation and growth,

solute redistribution, interfacial stability and morphology, transport phenomena: continuum treatments and structural effects, and rapid solidification.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 531 - Solidification Processing II

The technology of solidification processing is covered in this course; clean metal processing; crystal growth; squeeze casting; thixo- and compo-casting; diffusion solidification and rheocasting; continuous casting processes, VM, VAR, ESR, and VADER processing; structural control via MDH; rapid solidification processes (RSP); microgravity casting.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 535 - Numerical Engineering Methods

Covers numerical solution of non-linear equations, linear systems, and integration of ordinary differential equations. Introduces finite differences and finite elements. Provides a user's perspective of finite elements, element selection, convergence, and error estimation. Applications to heat transfer, diffusion, stress analysis, and coupled problems. Maple and ABAQUS (a commercial non-linear finite element program) are used in this course. A term project using ABAQUS is required. Emphasis is placed on materials engineering examples.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 540 - Polymer Morphology

Covers crystallography, crystallization, single crystals, bulk crystallization, orientation, amorphous polymers, and experimental techniques.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 543 - Thermal Spray Technology

Thermal spray technology and coatings provides "solutions" to a large number of surface engineering problems - wear, corrosion, thermal degradation. This course will [i] be of interest and use to students majoring in materials, mechanical, chemical, electrical & environmental engineering; [ii] provide a thorough grounding and understanding of thermal spray processes, their principles and applications; [iii] integrate this knowledge with practical engineering applications and current industrial surfacing practice.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following College(s)/School(s):

College of Engineering

Repeat Status: Not repeatable for credit

MATE 544 - Nanostructured Polymeric Materials

This course is designed to address the role of polymer science in Nanotechnology. Topics that will be covered include block copolymer templated self assembly, polymer thin and thick films, LBL, self assembly, soft lithography and polymer nanocomposites.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MATE 501 Minimum Grade: C

Repeat Status: Not repeatable for credit

MATE 545 - Fracture of Polymeric Matrls

Theoretical strength; defects; brittle fracture; fracture surfaces; fracture mechanics; creep failure; fatigue failure; environmental stress cracking; composite failure; crazing; impact and high-speed failure.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 560 - Powder Metallurgy I

Covers commercial and near-commercial methods of powder making, material and process variables, atomization mechanisms, powder properties and characterization, powder compaction, and properties in the green state.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 561 - Powder Metallurgy II

Covers powder consolidation: pressing and sintering; preform forging, rolling, extrusion, and hot isostatic pressing; innovative powder processing techniques, including spray forming; and structure-property relationships in press and sinter and fully dense materials.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 565 - Crystal Mechanics I

Covers crystal plasticity, texture development, continuum aspects of dislocations, interaction and intersection of dislocations, dislocation multiplication, dislocations in crystalline solids, and dislocation boundaries and configurations.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 566 - Crystal Mechanics II

Covers Peierls-Nabarro stress, thermally activated flow, work hardening, creep, superplasticity, ductile and brittle fracture, and fatigue.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 570 - Materials Processing I

Covers metal deformation processes: slab and deformation work analyses; slip line theory; and upper bound analysis applied to upsetting, drawing, extrusion, rolling, and deep drawing.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

MATE 571 - Materials Processing II

Manufacture of objects from powder--atomization, compaction, sintering, and liquid phase consolidation techniques; deformation processing of powder preforms; manufacture of shapes by high-strength cold deformation-preferred orientation, substructure, strengthening mechanisms.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

MATE 580 - Special Topics Matrls Engr

Covers selected advanced-level topics. May be repeated for credit if topics vary.

Credits: .50 to 9.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

MATE 585 - Nanostructured Carbon Materials

Covers advanced carbon materials ranging from diamond to fullerenes and nanotubes. Structure, properties and applications will be discussed.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following College(s)/School(s):

College of Engineering

Repeat Status: Not repeatable for credit

MATE 605 - Comp Simulation Mtls & Proc I

Simulation of equilibrium and transport properties of materials by Monte Carlo and molecular dynamics methods

Credits: 4.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 610 - Mechanical Behavior of Solids

Covers stress and strain, three-dimensional nomenclature, hydrostatic and deviatoric stresses, isotropic and anisotropic elasticity and plasticity, viscoelasticity, crack growth, and fracture.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 651 - Advanced Polymer Processing

Covers continuum mechanics; heat transfer; application to extrusion, calendaring, coating, injection molding, film blowing, rotational molding, and fiber spinning; powder processing; design; and equipment selection.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 661 - Biomedical Materials I

This course covers biocompatibility; implantable devices; survey of materials properties; corrosion;; cardiovascular applications; orthopedic applications; kidney dialysis; artificial heart and lung devices.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 662 - Biomedical Materials II

This course covers phase equilibria; strengthening of materials; dental cast alloys; denture base materials; adhesives and sealants; porcelain and glasses; dental materials laboratory.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MATE 699 - Independent Study and Research

Hours and credits to be arranged.

Credits: .50 to 9.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

MATE 702 - Natural Polymers

This course provides an introduction to natural and biomimetic polymers with an interdisciplinary view of biology, chemistry and macromolecular science. An understanding of natural building blocks and methods by which nature carries out polymer synthesis and modification reactions is coupled with Insights into DNA; structural proteins; polysaccharides; and a wide variety of renewable resources.

Credits: 3.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following College(s)/School(s):

Arts and Sciences

College of Engineering

Pre-Requisites: MATE 501 Minimum Grade: C

Repeat Status: Not repeatable for credit

MATE 897 - Research

Hours and credits to be arranged.

Credits: 1.00 to 12.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following Major(s):

Materials Engineering

Materials Sci and Engineering

Repeat Status: Course can be repeated 98 time(s) for 998.00 credit(s)

MATE 898 - Master's Thesis

Hours and credits to be arranged.

Credits: 1.00 to 12.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following Major(s):

Materials Engineering

Materials Sci and Engineering

Repeat Status: Course can be repeated 99 time(s) for 998.00 credit(s)

MATE 998 - Ph.D. Dissertation

Hours and credits to be arranged.

Credits: 1.00 to 12.00

College: College of Engineering

Department: Materials Sci and Engineering

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following Major(s):

Materials Engineering

Materials Sci and Engineering

Mechanical Engineering & Mechanics Courses

MEM 503 - Gas Turbines & Jet Propulsion

Covers fundamentals of thermodynamics and aerothermodynamics, and application to propulsion engines; thermodynamic cycles and performance analysis of gas turbines and air-breathing propulsion systems, turbojet, turboprop, ducted fan, ramjet, and ducted rocket; theory and design of ramjets, liquid and solid rockets, air-augmented rockets, and hybrid rockets; aerodynamics of flames, including the thermodynamics and kinetics of combustion reactions; supersonic combustion technology and zero-g propulsion problems; and propulsion systems comparison and evaluation for space missions.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 504 - HVAC Equipment

Covers performance of air handlers, pumps, direct expansion systems, chillers, cooling towers, and similar equipment.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 505 - HVAC Controls

Covers control theory and application to heating, ventilating, air conditioning, including pneumatic, fluidic, and electronic controls.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 530 - Aircraft Flight Dynam & Ctrl I

Covers development of dynamic models, linearization, aerodynamic coefficients, control derivatives, longitudinal and lateral modes, and open-loop analysis.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 569 - Intro Composite Materials I

Introduces anisotropic elasticity, lamina stiffness and compliance, plane-stress and plane-strain, stress-strain relations of a lamina, testing methods, engineering elastic constants, failure criteria, and micromechanics.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 570 - Intro Composite Materials II

Covers laminated plate theory, stiffness and compliance of laminated plates, effect of laminate configuration on elastic performance, and review of research topics.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 569 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 571 - Intro To Robot Technology

Covers robot configuration; components, actuators, and sensors; vision; and control, performance, and programming. Includes lectures and laboratory.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 572 - Mech Of Robot Manipulators

Covers homogeneous transformation, direct and inverse kinematic manipulators, velocities and acceleration, static forces, and manipulators' dynamics, via Lagrange and Newton-Euler formulations. Includes lectures and laboratory.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 666 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 573 - Industrial Appl Of Robots

Covers path planning and workspace determination, robot accuracy and repeatability measurements, robot cell design, application engineering and manufacturing, material transfer, processing operations, and assembly and inspection. Includes lectures and laboratory.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 574 - Introduction to CAM

Examines the basic elements used to integrate design and manufacturing processes, including robotics, computerized-numerical controlled machines, and CAD/CAM systems. Covers manufacturability considerations when integrating unit process elements.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 591 - Applied Engr Analy Methods I

Covers effective methods to analyze engineering problems. This module focuses on analytical and computational methods for problems tractable with vectors, tensors and linear algebra. Uses symbolic/numerical computational software. Examples drawn from thermal fluid sciences, mechanics and structures, systems and control, and emerging technologies.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 592 - Applied Engr Analy Methods II

Covers effective methods to analyze engineering problems. This module focuses on computational and analytical methods for complex variables and ordinary differential equations. Uses symbolic/numerical computational software. Examples drawn from thermal fluid sciences, mechanics and structures, systems and control, and emerging technologies.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 591 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 593 - Applied Engr Analy Methods III

Covers effective methods to computationally and analytically solve engineering problems. This module focuses on solution methods for partial differential equations, Fourier analysis, finite element analysis and probabilistic analysis. Uses symbolic/numerical computational software. Examples drawn from mechanical and civil engineering.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 592 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 601 - Statistical Thermodynamics I

Covers probability theory; statistical interpretation of the laws of thermodynamics; systems of independent particles; systems of dependent particles; kinetic theory of dilute gases; quantum mechanics; energy storage and degrees of freedom; and thermochemical properties of monatomic, diatomic, and polyatomic gases.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 602 - Statistical Thermodynamics II

Covers analysis of monatomic solids, theory of liquids, chemical equilibrium, kinetic and thermochemical description of rate processes, transport phenomena, and spectroscopy.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 601 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 603 - Advanced Thermodynamics

Covers reformulation of empirical thermodynamics in terms of basic postulates; presentation of the geometrical, mathematical interpretation of thermodynamics; Legendre transforms; requirements for chemical and phase equilibrium; first-and second-order phase transitions; Onsager reciprocal relations; and irreversible thermodynamics.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 611 - Conduction Heat Transfer

Covers conduction of heat through solid, liquid, and gaseous media; advanced analytical methods of analysis, including integral transform and Green's functions, the use of sources and sinks, and numerical and experimental analogy methods; and variational techniques.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 612 - Convection Heat Transfer

Covers convective heat transfer without change of phase or constitution, fundamental equations, exact solutions, application of the principle of similarity and the boundary-layer concept to convective heat transfer, similarity between heat and momentum transfer, and heat transfer in high-velocity flows.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 613 - Radiation Heat Transfer

Covers radiation heat transfer between surfaces and within materials that absorb and emit. Formulates and applies methods of analysis to problems involving radiation alone and radiation combined with conduction and convection.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 617 - Intro to Microfabrication

This course focuses on the fundamentals of microfabrication technologies. The materials, principles, and applications of silicon-based microfabrication technologies such as photolithography, wet/dry etching, deposition techniques, surface micromachining, and polymer micromachining will be covered. This course also includes two lab sessions through which students will have a hands-on experience in microfabrication.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following College(s)/School(s):

College of Engineering

Repeat Status: Not repeatable for credit

MEM 619 - Microfluidics and Lab-on-a-Chip

The course explores applications of microfluidic phenomena and lab-on-a-chip technology. The topics include fluid behavior in microchannels, electrokinetic manipulation, micro-scale separation/surface sciences, transducer effects, and microactuators. Students will also have a hands-on experience through laboratory sessions.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Must be enrolled in one of the following College(s)/School(s):

College of Engineering

Pre-Requisites: MEM 417 Minimum Grade: C or MEM 617 Minimum

Grade: C

Repeat Status: Not repeatable for credit

MEM 621 - Foundations of Fluid Mechanics

Covers kinematics and dynamics of fluid motion; Lagrangian and Eulerian description of motion; transport theorem; continuity and momentum equations (Navier-Stokes equations); vorticity vector and equation; three-dimensional, axisymmetric, and two-dimensional complex potential flows; constitutive equations of a viscous fluid; dynamic similarity; Stokes flow; and similarity analysis.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 622 - Boundary Layers-Lam & Turb

Covers laminar boundary layers; approximate integral method; three-dimensional laminar boundary layer and boundary-layer control; transient boundary-layer flows; the integral momentum equation; origins of turbulence; transition to turbulent flow; Reynolds-averaged equations; Reynolds stress; measurement of turbulent quantities; study of turbulent wall bounded flows, including pipe flow, flow over a flat plate, and flow over a rotating disk; and boundary layer in a pressure gradient.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 621 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 630 - Linear Multivariable Systems I

State space representation, continuous time and discrete time systems, similarity transformation, invariant subspaces, state response, stability, controllability, observability, Kalman decomposition, spectral and singular value decompositions.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 631 - Linear Multivar Sys II

Pole assignment, output feedback, linear quadratic regulator, observer design, stochastic processes, state response to white noise, Kalman filter, linear quadratic Gaussian controller, evaluation of closed loop system.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 632 - Linear Multivar Sys III

Model reduction: approximation of transfer functions, modal truncations, oblique projections, component cost analysis, internal balancing; controller reduction: observer-based controller parametrization, Riccati balancing, q-COVER theory, optimal projections

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 633 - Robust Control Systems I

Covers linear spaces and linear operators; Banach and Hilbert spaces; time-domain spaces; frequency-domain spaces; singular value decomposition; EISPACK, LINPACK, and MATLAB, including internal stability; coprime factorization over the ring of polynomial matrices; matrix fraction description; properties of polynomial matrices; irreducible mfd; Smith-McMillan form; poles and zeros; canonical realizations; and computation of minimal realizations.

Credits: 3.00

College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

MEM 634 - Robust Control Systems II
Covers the structure of stabilizing controllers; coprime factorization over the ring of proper stable rational matrices; algebraic Riccati equation; state space computation of coprime factorization; yvb controller parametrization; linear fractional transformation; state space structure of proper stabilizing controllers; formulation of control problem, H, and H optimization problem; model matching problem; tracking problem; robust stabilization problem; inner-outer factorization; and Sarason's H interpolation theory.
Credits: 3.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: MEM 633 Minimum Grade: C
Repeat Status: Not repeatable for credit

MEM 635 - Robust Control Systems III
Covers Hankel-norm approximations, balanced realizations, two-block H optimization, generalized multivariable stability margins, structured and non-structured stability margins, structured singular values, robust stabilization and performance, and recent developments in robust control.
Credits: 3.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: MEM 634 Minimum Grade: C
Repeat Status: Not repeatable for credit

MEM 636 - Theory of Nonlinear Control I
Provides a comprehensive introduction to the geometric theory of non-linear dynamical systems and feedback control. Includes stability, controllability, and observability of non-linear systems; exact linearization, decoupling, and stabilization by smooth feedback; and zero dynamics.
Credits: 3.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

MEM 637 - Theory of Nonlinear Control II
Covers systems with parameters, including bifurcation and stability; static bifurcation; local regulation of parameter-dependent non-linear dynamics; tracking; limit cycles in feedback systems; perturbation methods; frequency domain analysis; and applications.
Credits: 3.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: MEM 636 Minimum Grade: C
Repeat Status: Not repeatable for credit

MEM 638 - Theory Nonlinear Ctrl III
Covers high gain and discontinuous feedback systems, including sliding modes, applications, and advanced topics.
Credits: 3.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: MEM 637 Minimum Grade: C
Repeat Status: Not repeatable for credit

MEM 639 - Real Time Microcomp Ctrl I
Covers discrete-time systems and the Z-transform, sampling and data reconstruction, the pulse transfer function, discrete state equations, time-domain analysis, digital simulation, stability, frequency-domain analysis, Labview programming, and data acquisition and processing.
Credits: 3.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites:
Repeat Status: Not repeatable for credit

MEM 640 - Real Time Microcomp Ctrl II
Covers design of discrete-time controllers, sampled data transformation of analog filter, digital filters, microcomputer implementation of digital filters, Labview programming techniques, using the daq library, writing a data acquisition program, and Labview implementation of pid controllers.
Credits: 3.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: MEM 639 Minimum Grade: C
Repeat Status: Not repeatable for credit

MEM 646 - Fundamentals of Plasmas I

Introduces the fundamentals of plasma science and modern industrial plasma applications in electronics, fuel conversion, environmental control, chemistry, biology, and medicine. Topics include quasi-equilibrium and non-equilibrium thermodynamics, statistics, fluid dynamics and kinetics of plasma and other modern high temperature and high energy systems and processes.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 647 - Fundamentals of Plasma II

Continues the development of the engineering fundamentals of plasma discharges applied in modern industrial plasma applications in electronics, fuel conversion, environmental control, chemistry, biology, and medicine. Topics include quasi-equilibrium and non-equilibrium thermodynamics, statistics, fluid dynamics of major thermal and non-thermal plasma discharges, operating at low, moderate and atmospheric pressures.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 646 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 648 - Applications of Thermal Plasma

Introduces applications of modern thermal plasma processes focused on synthesis of new materials, material treatment, fuel conversion, environmental control, chemistry, biology, and medicine. Topics include: thermodynamics and fluid dynamics of high temperature plasma processes, engineering organization of specific modern thermal plasma technologies.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 649 - Application of Non-Thermal Plasmas

Application of modern non-thermal plasma processes focused on synthesis of new materials, material treatment, fuel conversion, environmental control, chemistry, biology, and medicine. Topics include: non-equilibrium thermodynamics and fluid dynamics of cold temperature plasma processes, engineering organization of specific modern non-thermal plasma technologies.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 660 - Theory of Elasticity I

Summarizes mechanics of materials courses. Covers vector and tensor analysis, indicial notation, theory of stress, equilibrium equations, displacements and small strains, compatibility, and strain energy; formulation of the governing equations and the appropriate boundary conditions in linear elasticity, and uniqueness of the solutions; elementary three-dimensional examples and two-dimensional theory; stress functions; solutions in Cartesian and polar coordinates; and Fourier series.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 661 - Theory of Elasticity II

Covers two-dimensional problems by the method of Muskhelishvili, torsion problem, stress function and solutions by means of complex variables and conformal mapping, three-dimensional solutions for straight beams, energy theorems, virtual work and their applications, and Rayleigh-Ritz method.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 660 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 662 - Theory of Elasticity III

Covers use of Fourier series and Green's functions for plane problems; three-dimensional problems in terms of displacement potentials; use of the Galerkin vector and the Boussinesq-Papkovich-Neuber functions; fundamental solutions to the Kelvin, Boussinesq, Cerruti, and Mindlin problems; and elastic contact. Introduces non-linear elasticity.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 661 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 663 - Continuum Mechanics

Covers kinematics, Eulerian, and Lagrangian formulations of deformation; theory of stress; balance principles; continuum thermodynamics; and constitutive relations in fluids and solids.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 664 - Introduction to Plasticity

Reviews stress and strain deviators, invariants and distortional energy, principal and octahedral stresses and strains, Tresca and von Mises yield criteria, yield surface and Haigh-Westergaard stress space, Lode's stress parameter, subsequent yield surface, Prandtl-Reuss relations, work hardening and strain hardening, stress-strain relations from Tresca criteria, incremental and deformation theories, the slip-line field, slip-line equations for stress, velocity equations and geometry of slip-line field, limit analysis, simple truss, bending of beams, lower and upper bound theorems, and plasticity equations in finite-element methods.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 660 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 665 - Time-Dependent Solid Mechanics

Part a: Covers elastodynamics, including plane, cylindrical, and spherical waves; characteristics; the acoustic tensor; polarizations and wave speeds; transmission and reflection at plane interfaces; critical angles and surface waves; and waveguides and dispersion relationships. Part b: Covers linear viscoelasticity, including relaxation modulus and creep compliance, hereditary integrals, Laplace transform, correspondence principle, creep buckling and vibrations, viscoplasticity, creep, strain-rate effects, shear bands, and shock waves.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 660 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 666 - Advanced Dynamics I

Covers analytical statics (principle of virtual work), Lagrange's equations, conservation laws, stability analysis by perturbation about steady state, Jacobi first integral, ignorance of coordinates, classification of constraints, solution of constrained dynamical problems by constraint embedding (elimination) or constraint adjoining

(Lagrange multipliers), generalized impulse and momentum, and formulation and solution of non-holonomic systems.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 667 - Advanced Dynamics II

Covers vector dynamics in three dimensions, including a detailed study of rotational kinematics, motion of the mass center and about the mass center for a system of particles and a rigid body, moments of inertia, three-dimensional dynamical problems, and comparison between Lagrangian techniques and the vector methods of Euler and Newton. Includes vibrations, Euler's angles, motion of a gyroscope, and motion of an axially symmetric body under no force other than its weight.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 666 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 668 - Advanced Dynamics III

Covers central forces, effect of the earth's rotation, Foucault's pendulum, variational methods, Hamilton's principle, state space techniques for the integration of equations of motion, and numerical integration of equations of motion on microcomputers through the CSMP program. Depending on student interest, includes either Hamiltonian dynamics (canonical equations, contact transformations, Hamilton-Jacobi theory) or rigid body kinematics of complex dynamical systems.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 667 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 670 - Theory of Plates and Shells

Covers elements of the classical plate theory, including analysis of circular and rectangular plates, combined lateral and direct loads, higher-order plate theories, the effects of transverse shear deformations, and rotatory inertia; matrix formulation in the derivation of general equations for shells; and membrane and bending theories for shells of revolution.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 671 - Mechanical Vibrations I

Free and forced responses of single degree of freedom linear systems; two degree of freedom systems; multiple degree of freedom systems; the eigenvalue problem; modal analysis; continuous systems; exact solutions; elements of analytical dynamics.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 672 - Mechanical Vibrations II

Continuous systems; approximate solutions; the finite element method; nonlinear systems; geometric theory, perturbation methods; random vibrations; computational techniques.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 673 - Ultrasonics I

Basic elements of ultrasonic nondestructive evaluation, wave analysis, transducers, transform techniques, A,B,C,M,F and Doppler imaging, medical imaging, multiple element arrays, real-time imaging, calibration.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 674 - Ultrasonics II

Basic elements of guided wave analysis, oblique incidence reflection factor, critical angle reflectivity, surface waves, lamb waves, plate waves, dispersion, phase and group velocity, experimental techniques for guided waves

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 675 - Medical Robotics I

Use of robots in surgery, safety considerations, understanding robot kinematics, analysis of surgeon performance using a robotic devices, inverse kinematics, velocity analysis, acceleration analysis, various types of surgeries case study.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 676 - Medical Robotics II

Force and movement for robot arms, robot dynamics, computer vision, vision based control, combining haptics, vision and robot dynamics in a cohesive framework for the development of a medical robotic system.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 675 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 677 - Haptics for Medical Robotics

Introduction to haptics, physiology of touch, actuators, sensors, non-portable force feedback, portable voice feedback, tactile feedback interfaces, haptic sensing and control.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 681 - Finite Element Methods I

Covers formulation of finite element methods for linear analysis of static and dynamic problems in solids, structures, fluid mechanics, heat transfer, and field problems; displacement-based, hybrid, and stress-based methods; variational and weighted residual approaches; effective computational procedures for solution of finite element equations in static and dynamics analyses; and pre-processing and post-processing.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 682 - Finite Element Methods II

Covers formulation of advanced finite element methods for non-linear analysis of static and dynamic problems in solids, structures, fluid mechanics, heat transfer, and field problems; material non-linearity; large displacement; large rotation; large strain; effective solution procedures for non-linear finite element equations in static and dynamic analyses; and effective finite element methods for eigenvalue problems.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 681 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 684 - Mechanics Of Bio Tissues

Covers composition and structure of tendons, ligaments, skin, and bone; bone mechanics and its application in orthopedics; viscoelasticity of soft biological tissues; models of soft biological tissues; mechanics of skeletal muscle; and muscle models and their applications.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 685 - Mechanics of Human Joints

Covers the structure of human joints, including experimental and analytical techniques in the study of human joint kinematics; applications to the design of artificial joints and to clinical diagnosis and treatments; stiffness characteristics of joints and their applications to joint injuries; and prosthetic design and graft replacements.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 686 - Mechanics of Human Motion

Examines experimental and analytical techniques in human motion analysis and human locomotion; interdependency of muscle force distribution in human motion; modeling and simulation of bipedal locomotion; energetics, stability, control, and coordination of human motion; and pathological gait.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 687 - Manufacturing Processes I

Introduces basic manufacturing process technology and the mechanical properties of metals and plastics. Covers dimensional and geometry tolerancing; surface finishing; material removal processes and machine tools; processing of polymers and reinforced plastics, including general properties of plastic materials and forming, shaping, and processing of plastics; and CNC machining and programming. Combines lectures and laboratory work.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 688 - Manufacturing Processes II

Covers processing of polymers and reinforced plastics, including general properties of plastic materials and forming, shaping, and processing of plastics; CNC machining and programming; casting processes; sheet-metal forming processes; bulk deformation processes; and computer integrated manufacturing systems.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 687 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 689 - Computer-Aided Manufacturing

Covers development of software and hardware for computer-aided manufacturing systems, basic elements used to integrate the manufacturing processes, and manufacturability studies.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 699 - Independent Study and Research

Offers independent study and research in mechanical engineering.

Credits: .50 to 9.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

Pre-Requisites: MEM 706 Minimum Grade: C
Repeat Status: Not repeatable for credit

MEM 701 - Physical Gas Dynamics I

Reviews equilibrium kinetic theory of dilute gases. Covers non-equilibrium flows of reacting mixtures of gases, flows of dissociating gases in thermodynamics equilibrium, flow with vibrational or chemical non-equilibrium, non-equilibrium kinetic theory, flow with translational non-equilibrium, and equilibrium/non-equilibrium radiation.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 602 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 711 - Comp Fluid Mech/Ht Tran I

Covers classification of fluid flow and heat transfer phenomena, including time-dependent multidimensional heat conduction and finite-difference and finite-element formulations; convection and diffusion; upwind, exponential, and hybrid schemes; and boundary-layer-type fluid flow and heat transfer problems.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 705 - Combustion Theory I

Covers thermochemistry, including the relationship between heats of formation and bond energies, heat capacities and heats of reaction, chemical equilibrium and the equilibrium constant, calculation of adiabatic flame temperature and composition of burned gas, free energy and phase equilibrium, classical chemical kinetics, and chain reaction theory.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 712 - Comp Fluid Mech/Ht Trans II

Covers basic computational methods for incompressible Navier-Stokes equations, including vorticity-based methods and primitive variable formulation; computational methods for compressible flows; inviscid and viscous compressible flows; finite-element methods applied to incompressible flows; and turbulent flow models and calculations.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 711 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 706 - Combustion Theory II

Covers laminar flame propagation in premixed gases, detonation and deflagration, heterogeneous chemical reactions, burning of liquid and solid fuels, and diffusion flames.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 705 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 714 - Two-Phase Flow & Heat Transfer

Covers selected topics in two-phase flow, with emphasis on two-phase heat transfer problems, basic conservation equations for two-phase flows, nucleation, bubble dynamics, pool boiling, forced convective boiling, condensation heat transfer, two-phase flow equipment design, tube vibration and flow instability in two-phase flows, and fouling in heat transfer equipment.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 707 - Combustion Theory III

Covers advanced topics in combustion, including combustion-generated air pollution, incineration of hazardous wastes, supersonic combustion, propellants and explosives, and fires.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

MEM 717 - Heat Transfer Mfg Proc

Covers heat conduction fundamentals, including phase change problems (casting, welding, and rapid solidification processes) and cooling controls of rolling, forging, and extrusion processes.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 611 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 721 - Non-Newt Flu Mech/Ht Tran

Covers the stress-strain rate relationship, simple flow, general constitutive and conservation equations, generalized Newtonian models, molecular theories, rheological property measurements, plane Couette flow, hydrodynamic theory of lubrication, helical flow, boundary layer flows, pipe flows, natural convection, thin film analysis, drag reduction phenomenon, and biorheology.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 622 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 722 - Hydrodynamic Stability

Introduces stability, including discrete and continuous systems. Covers linear theory; instability of shear flows, spiral flows between concentric cylinders and spheres, thermoconductive systems, and viscous flows; global stability and non-linear theories; and time periodic and non-periodic flows, attractors, and bifurcation.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 622 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 723 - Vortex Inter/Comp Turb Fl

Nonlinear vortex motion and interaction; motion of point vortices; generation and interaction of vortex rings and counter-rotating vortex pairs; vortex impulse, energy, pairing, bifurcation, and bursting; study of free and separating turbulent flows: mixing layers, wakes, jets, and buoyant plumes; recirculation behind bluff bodies and backsteps; longitudinal and lateral vortex waves and shear layers; sweeps and bursts in turbulent boundary layers; characteristics of turbulence: entrainment and molecular mixing, effects of buoyancy, rotation, acceleration, and heat release; the 3-D turbulent energy cascade and the 2-D inverse cascade.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 725 - Compressible Fluid Dynamics

Reviews one-dimensional flows. Covers steady flow of a compressible fluid; two-and three-dimensional subsonic, transonic, supersonic, and hypersonic flow; normal and oblique shock waves; wave reflections; oblique shock wave interactions and generation vorticity; compressible boundary layers; and shock boundary-layer interactions.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 621 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 727 - Fluid Dyn/Mfg Process

Covers transport of slurries, molten metals, and polymers; hydrodynamics in forming processes; resin flow model in polymer composites; shaped charge jet technology; separation and filtration; coating; lubrication; and melt-spinning process.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 730 - Ctrl Flexible Space Struct I

Covers modeling of FSS including PDE description and finite element modeling, model errors, model reduction, component cost analysis, modal cost analysis, stability of mechanical systems, gyroscopic and non-gyroscopic systems, and rate and position feedback.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 731 - Ctrl Flexible Space Struct II

Covers probability theory, stochastic processes, Kalman filter, LQG compensators, controller reduction, CCA theory, balancing reductions, and applications.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 730 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 733 - Applied Optimal Control I

Covers necessary conditions from calculus of variations, equality and inequality constraints, fixed and free final time problems, linear-quadratic control, bang-bang control, and application to problems in flight mechanics.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 734 - Applied Optimal Control II

Covers neighboring extremals and the second variation, perturbation feedback control, sufficient conditions, numerical solution methods, and application to problems in flight mechanics.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 733 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 735 - Adv Topics-Optimal Ctrl

Covers singular arc control, model following control, variable structure control, singular perturbation methods, differential games, and applications.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 734 Minimum Grade: C

Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

MEM 760 - Mech Composite Material I

Covers anisotropic elastic moduli, stress-strain relations of a lamina, failure criteria of a lamina, introduction to micromechanics, laminated plate theory, residual stresses, and strength of laminates.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 660 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 761 - Mech Composite Materials II

Covers anisotropic plates and shells, boundary value problem in anisotropic heterogeneous elasticity, vibrations and buckling of laminated plates, and testing methods.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 760 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 762 - Mech Composite Materials III

Covers classical failure criteria for orthotropic materials, fracture in laminates, three-dimensional stress analysis, simulation of delamination and transverse cracks, fatigue damage, and cumulative damage models.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: MEM 761 Minimum Grade: C

Repeat Status: Not repeatable for credit

MEM 770 - Theory of Elastic Stability

General stability criteria; beam column; the elastica; energy methods; torsional stability; combined torsion and flexure; lateral buckling of beams in pure bending; buckling of rings; curved bars and arches.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Not repeatable for credit

MEM 777 - Fracture Mechanics I

Covers fundamental mechanics of fracture, including linear elastic crack mechanics, energetics, small-scale yielding, fully plastic crack mechanics, creep crack mechanics, fracture criteria, mixed mode fracture, stable quasi-static crack growth (fatigue crack growth and environmentally induced crack growth), toughness and toughening, and computational fracture mechanics.

Credits: 3.00

College: College of Engineering

Department: Mechanical Engr & Mechanics

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites:

Repeat Status: Not repeatable for credit

MEM 782 - Impact and Wave Propagation I
Governing equations for elastic waves; longitudinal waves in a bar; transverse in a flexible string; flexural waves in a Bernoulli-Euler beam; flexural waves in a Timoshenko beam; Rayleigh surface waves; Pochhammer-Chree waves in circular cylinders; reflection of plane waves at a plane boundary.
Credits: 3.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

MEM 783 - Impact and Wave Propagation II
Spherical and cylindrical waves in unbounded medium; method of Laplace transform; method of characteristics; flexural waves in a Timoshenko plate; viscoelastic and viscoplastic waves; dispersion and phase velocity; natural frequency in free vibration.
Credits: 3.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

MEM 784 - Impact & Wave Propgtn III
Governing equations for unsteady, nonisentropic fluid flows; shock waves; method of characteristics for nonlinear system; numerical integration along characteristics; impact and vibration of shell topics in wave propagation.
Credits: 3.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

MEM 800 - Special Topics Mech Engr
Covers topics of current interest to faculty and students; specific topics for each term will be announced prior to registration. May be repeated for credit if topics vary.
Credits: .50 to 9.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 99 time(s) for 998.90 credit(s)

MEM 891 - Topics In Advanced Engr I
Linear systems; control theory; vibrations and eigenvalue problems; systems dynamics; Fourier transformation; flight dynamics.

Credits: 2.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

MEM 892 - Topics In Advanced Engr II
Separation of variables; thermodynamics; heat transfer; fluid mechanics; boundary layer theory; elasticity; finite element methods. Solid mechanics; aeroelasticity
Credits: 2.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

MEM 893 - Topics In Advanced Engr III
Basic probability and statistics; communication theory; sampled data system; digital and optical processing
Credits: 2.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

MEM 894 - Engineering Mathematics
Application of matrices, linear algebra, and complex analysis to engineering problems. Ordinary and partial differential equations.
Credits: 3.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

MEM 897 - Research
Supervised research in Mechanical Engineering.
Credits: 1.00 to 12.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 98 time(s) for 998.00 credit(s)

MEM 898 - Master's Thesis
Master's thesis.

Credits: 1.00 to 20.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

MEM 998 - Ph.D. Dissertation
Ph.D. dissertation.
Credits: 1.00 to 12.00
College: College of Engineering
Department: Mechanical Engr & Mechanics
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Course can be repeated 98 time(s) for 998.00 credit(s)

Telecommunications Courses

ECET 501 - Fundamentals of Communications Engineering
Fundamentals of Communications Engineering. This course introduces basic modulation, deletion and coding techniques in modern telecommunications systems, including PAM and FSK, spread-spectrum and OFDM, ML receiver, ISI and equalization, compression code and coded modulation. May be repeated once for credit.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECES 521 Minimum Grade: C and ECES 522 Minimum Grade: C
Repeat Status: Course can be repeated 0 time(s) for 3.00 credit(s)

ECET 511 - Physical Foundations of Telecommunications Networks
Physical Foundations of Telecommunications Networks. Introduction to wired and wireless telecommunication systems. Review of wave propagation. Review of wireline transmission media. Modeling wireline and wireless point-to-point communication links. N-port linear networks and network analysis/parameters. Review of passive RF components, semiconductor devices. Optical communication devices: optical switches, couplers, isolators, sources, modulators, detectors, amplifiers. Overview of active circuits.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECET 512 - Wireless Systems

Fundamentals of modern wireless systems. Fundamentals of radio propagation and link performance. Cellular concept: interference, base stations and cell sites, handoffs, system capacity. Fading environments: multipath propagation, delay spread, Doppler Spread, statistically fading channel models. Multiple-access schemes: FDMA, TDMA, CDMA, SDMA. Emerging methodologies: phases/adaptive antenna array, multi-array (MIMO) communication systems.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECET 513 - Wireless Networks
Introduction to Wireless Networks, Evolution: 1G, 2G, 3G, Next-G. Wireless Networks Operation: Mobility and Resource Management, Security. Wireless WANs: GSM, CDMA, IS-95, and IMT-2000, Mobil Data Networks, Wireless LANs: 802.11, HIPERLAN, Ad Hoc Networks, Mobil IP. Next Generation Wireless Systems.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Repeat Status: Not repeatable for credit

ECET 602 - Information Theory and Coding
This course introduces fundamental information theory and source and channel coding technology. Major topics include: Entropy and mutual information, source coding theorem, Huffman code, rate-distortion function and vector quantization, channel capacity, channel coding theorem, linear block code, cyclic code, convolution code, Turbo code, LDPC code, trellis coded modulation, space-time code. May be repeated once for credit.
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr
Restrictions:
Must be enrolled in one of the following Program Level(s):
Graduate Quarter
Pre-Requisites: ECES 521 Minimum Grade: C and ECES 522 Minimum Grade: C
Repeat Status: Course can be repeated 1 time(s) for 3.00 credit(s)

ECET 603 - Optical Communications and Networks
This course introduces fiber-optic based transmission and networking technology. Major topics include: Loss and dispersion characters of fiber, shot noise, modulation, line code, direct receiver, coherent receiver, link budget, optical layer, SONET, WDM, photonic packet switch, Hybrid systems (CATV).
Credits: 3.00
College: College of Engineering
Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Pre-Requisites: ECET 501 Minimum Grade: C and ECET 511 Minimum Grade: C

Repeat Status: Course can be repeated 1 time(s) for 3.00 credit(s)

ECET 604 - Internet Laboratory

This course aims to prepare the next generation of Internet engineers for the challenges of understanding, maintaining, and participating in an ever-evolving Internet through hands-on experiments on real networking equipment. The long term objective of the internet Laboratory course is to graduate students who can maintain, update, improve, and even redesign the Internet.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Major(s):

Computer Engineering

Computer Science

Repeat Status: Not repeatable for credit

ECET 690 - Special Topics in Telecommunications

Allows faculty to present material of current research or industrial interest relevant to graduate telecommunications. May be repeated for credit.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 98 time(s) for 998.00 credit(s)

ECET 697 - Research in Telecommunications

Research credits in telecommunications. May be repeated for credit.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 98 time(s) for 998.00 credit(s)

ECET 699 - Supervised Study in Telecommunications

Supervised Study in Telecommunications Engineering. May be repeated for credit.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr

Restrictions:

Must be enrolled in one of the following Program Level(s):

Graduate Quarter

Repeat Status: Course can be repeated 98 time(s) for 998.00 credit(s)

ECET 898 - Master's Thesis in Telecommunications

Master's thesis in telecommunications. May be repeated for credit.

Credits: 3.00

College: College of Engineering

Department: Electrical & Computer Engr
