The College of Engineering

About the College

The rapid advances and evolving challenges in our world necessitate engineers who can think broadly, adjust quickly and act decisively. That's why our focus at Drexel University is empowering students to engineer change – in their lives and through their careers – by emphasizing a balance of theory and practical experience.

Since the beginning more than 130 years ago, engineering has been the cornerstone of Drexel University. Today, the college is home to some of the top-ranked engineering programs. Within the College of Engineering departments, faculty and staff work to conduct theoretical and applied research while the relevant, challenging and high quality academics are taught by accomplished faculty and leaders in their fields from all over the world. College curricula are grounded in foundational principles and practices while providing opportunities to explore emerging topics in the disciplines.

As a comprehensive, global institution, our programs equip students with the tools to advance in the profession and follow a trajectory towards making an impact. As an engineering student at the college you will learn to find sustainable and achievable outcomes to address society's biggest challenges while making them relevant to your career goals. Master's and certificate programs offer education that propels careers forward as an expert in the field and doctoral programs have students learning at a R1 designated institution alongside world-renowned faculty.

Majors

- Architectural Engineering (MSAE) (p. 4)
- Architectural Engineering (PhD) (p. 6)
- Chemical Engineering (MS) (p. 9)
- Chemical Engineering (PhD) (p. 13)
- Civil Engineering (MSCE) (p. 16)
- Civil Engineering (PhD) (p. 21)
- Computer Engineering (MS) (p. 26)
- Computer Engineering (PhD) (p. 32)
- Construction Management (MS) (p. 36)
- Cybersecurity (MS) (p. 38)
- Electrical Engineering (MS) (p. 44)
- Electrical Engineering (PhD) (p. 50)
- Engineering (ME) (p. 55)
- Engineering Management (MS) (p. 56)
- Engineering Technology (MSET) (p. 59)
- Environmental Engineering (MSENE) (p. 60)
- Environmental Engineering (PhD) (p. 63)
- Internet of Things (MSIOT) (p. 66)
- Machine Learning Engineering (MSMLE) (p. 69)
- Materials Science and Engineering (MSMSE) (p. 71)
- Materials Science and Engineering (PhD) (p. 75)
- Mechanical Engineering and Mechanics (MSME) (p. 79)
- Mechanical Engineering and Mechanics (PhD) (p. 84)
- Robotics and Autonomy (MS) (p. 89)
- Systems Engineering (MSSYSE) (p. 91)

Minors

- Computational Engineering (p. 95)

Certificates

- Construction Management (p. 96)
- Engineering Management (p. 96)
- Engineering Technical Leadership (p. 97)
- Hardware Systems Engineering (p. 97)
- Naval Engineering (p. 98)
- Peace Engineering (p. 99)
- Power Systems Engineering (p. 99)

- ***NEW*** Spectrum Defense
- Sustainability and Green Construction (p. 101)
- Systems Engineering (p. 102)
- Systems Engineering for Software Applications (p. 102)

About Graduate Co-op

Drexel University's long tradition in the field of experiential learning has now been extended into many of its master's programs in science, business, and engineering.

This option, called the Graduate Co-op Program (http://www.drexel.edu/scdc/co-op/graduate/) (GCP), provides students with the opportunity to gain work experience directly related to their career goals. Graduate co-op is typically a three to six-month engagement with an employer. Students generally get paid for their work ranging from 20-40 hours per week. You will seek your position opportunities with the resources and connections available through our Steinbright Career Development Center (https://drexel.edu/scdc/co-op/graduate/). It is important to note that the GCP program does not guarantee a job. It is a market-driven process for the candidates as well as employers. GCP provides the tools and contacts; the student must qualify for the job on the basis of merit, qualifications, and skills.

More about Graduate Co-op from the College of Engineering (https://drexel.edu/engineering/academics/experiential-learning-co-op/graduate-co-ops/).

Architectural Engineering MSAE

Major: Architectural Engineering
Degree Awarded: Master of Science in Architectural Engineering (MSAE)
Calendar Type: Quarter
Minimum Required Credits: 45.0 (MSAE)
Co-op Option: None
Classification of Instructional Programs (CIP) code: 14.0401
Standard Occupational Classification (SOC) code: 11-9041

About the Program

Architectural Engineering is inherently an interdisciplinary enterprise that is centered on the design, construction, and operation of the built environment. Architectural Engineering MS students may include those with expertise, usually housed in civil/environmental engineering and elsewhere in traditional disciplinary constructs or newly developing fields of focus or expertise, in one or more of the following sub-disciplines:

- Building energy efficiency and alternative energy
- Indoor environmental quality

Our graduates are engineers and researchers trained in integrated building design and operation practices, who can work on interdisciplinary teams that are able to develop creative solutions combined with technological advances to produce functional, efficient, attractive and sustainable building infrastructure.

Additional Information

For more information, visit the MS in Architectural Engineering (https://drexel.edu/engineering/academics/graduate-programs/masters/architectural-engineering/) or Department of Civil, Architectural and Environmental Engineering (https://drexel.edu/engineering/academics/departments/civil-architectural-environmental-engineering/) webpage.

Admission Requirements

Applicants to the MS Architectural Engineering must meet the following requirements:

- A BS in Engineering OR
- For students without an Engineering degree, the following courses, or their approved equivalents from other departments, will meet these requirements:
  - *Introduction to Fluid Flow* – CIVE 320
  - *Introduction to Thermodynamics* – MEM 210
  - *Heat Transfer* – MEM 345 – for Building Energy students
  - *General Chemistry II* – CHEM 102 – for Indoor Environmental Quality students

The application package will include:

- undergraduate and graduate transcripts
- three letters of recommendation from faculty or professionals who can evaluate the applicant's promise as a graduate student
- GRE scores (optional)
- a written statement of career and educational goals

Competitive applicants will possess an undergraduate GPA of 3.30 or higher and GRE scores above the 60th percentile.

For more information, visit College of Engineering Graduate Admissions (https://drexel.edu/engineering/admissions/graduate/).

Degree Requirements

The goal of the MS in Architectural Engineering (AE) is to produce graduates who have a solid understanding of the Architectural Engineering discipline as well as an understanding of the interrelationships between the major AE sub-disciplines. Graduates will have demonstrated the ability and capacity to apply that understanding and skill, and the curriculum and project requirements are designed to provide to the students and then ask them to demonstrate the ability to effectively engage in professional-level performance.

Required Courses		
Core Courses for all AE students		
AE 510	Intelligent Buildings	3.0
AE 544	Building Envelope Systems	3.0
AE 550	Indoor Air Quality	3.0
AE 551	Building Energy Systems I *	3.0
or AE 552	Building Energy Systems II	
MEM 591	Applied Engr Analy Methods I	3.0
MEM 592	Applied Engr Analy Methods II	3.0
Graduate Technical Electives		
Must complete at least 9.0 credits the list below:		9.0
AE 552	Building Energy Systems II *	
AE 555	Data Acquisition and Analytics in Built Environment	
AE 561	Airflow Simulation in Built Environment	
CHE 513	Chemical Engineering Thermodynamics I	
CHE 525	Transport Phenomena I	
ENVE 560	Fundamentals of Air Pollution Control	
ENVE 571	Environmental Life Cycle Assessment	
ENVE 660	Chemical Kinetics in Environmental Engineering	
ENVE 727	Risk Assessment	
ENVE 750	Data-based Engineering Modeling	
ENVS 501	Chemistry of the Environment	
MEM 611	Conduction Heat Transfer	
MEM 612	Convection Heat Transfer	
MEM 621	Foundations of Fluid Mechanics	
Additional Electives **		18.0
Total Credits		**45.0**

*****

If AE 552 is taken as a core required course, it cannot be taken as a technical elective. Conversely, if AE 552 is taken as a technical elective, it cannot be counted as a core required course.

******

The balance of the required 45.0 credits, a maximum of 18.0 credits, will be electives approved by the student's advisor and the departmental graduate advisor in any of the following subjects: AE, CHE, CHEC, CHEM, CIVE, ENVE, ENSS, ENVP, ENVS, MATH, MEM (500-699).

Sample Plan of Study

Sample Plan of Study

First Year

Fall	Credits	Winter	Credits	Spring	Credits
AE 544	3.0	AE 510	3.0	Graduate Technical Elective	3.0
AE 550	3.0	AE 551 or 552	3.0	Additional Electives	6.0
MEM 591	3.0	MEM 592	3.0		
	9		**9**		**9**

Second Year			
Fall	**Credits**	**Winter**	**Credits**
Graduate Technical Elective	3.0	Graduate Technical Elective	3.0
Additional Electives	6.0	Additional Electives	6.0
	9		**9**

Total Credits 45

Undergraduate Course Prerequisites for students without an Engineering Degree:

The following courses, or their approved equivalents from other departments, will meet these requirements:

- CIVE 320 - Fundamental Fluids
- CHEM 102 - Basic Chemistry
- ENGR 210 - Thermodynamics

Civil, Architectural and Environmental Engineering Faculty

Abieyuwa Aghayere, PhD *(University of Alberta)*. Professor. Structural design - concrete, steel and wood; structural failure analysis; retrofitting of existing structures; new structural systems and materials; engineering education.

A. Emin Aktan, PhD *(University of Illinois at Urbana-Champaign) John Roebling Professor of Infrastructure Studies*. Professor. Structural engineering; health monitoring of large infrastructure systems; infrastructure evaluation; intelligent systems.

Ivan Bartoli, PhD *(University of California, San Diego)*. Associate Professor. Non-destructive evaluation and structural health monitoring; dynamic identification, stress wave propagation modeling.

Robert Brehm, PhD *(Drexel University)*. Associate Teaching Professor. International infrastructure delivery; response to natural catastrophes; risk assessment and mitigation strategies; project management techniques.

S.C. Jonathan Cheng, PhD *(West Virginia University)*. Associate Professor. Soil mechanics; geosynthetics; probabilistic design; landfill containments; engineering education.

Peter DeCarlo, PhD *(University of Colorado)*. Assistant Professor. Outdoor air quality, particulate matter size and composition instrumentation and measurements, source apportionment of ambient particulate matter, climate impacts of particulate matter.

Eugenia Ellis, RA, PhD *(Virginia Polytechnic State University)*. Associate Professor. Extended-care facilities design, research on spatial visualization, perception and imagination.

Patricia Gallagher, PhD *(Virginia Polytechnic Institute)*. Associate Professor. Soil mechanics; geoenvironmental; ground improvement; sustainability.

Patrick Gurian, PhD *(Carnegie-Mellon University)*. Associate Professor. Risk analysis of environmental and infrastructure systems; novel adsorbent materials; environmental standard setting; Bayesian statistical modeling; community outreach and environmental health.

Charles N. Haas, PhD *(University of Illinois-Urbana) L. D. Betz Professor and Department Head, Civil, Architectural and Environmental Engineering*. Professor. Control of human exposures to and risk assessment of pathogenic organisms; water and waste treatment; homeland security.

Ahmad Hamid, PhD *(McMaster University)*. Professor. Engineered masonry; seismic behavior, design and retrofit of masonry structures; development of new materials and building systems.

Y. Grace Hsuan, PhD *(Imperial College)*. Professor. Durability of polymeric construction materials; advanced construction materials; and performance of geosynthetics.

Joseph B. Hughes, PhD *(University of Iowa) Dean of the College of Engineering and Distinguished Professor*. Biological processes and applications of nanotechnology in environmental systems.

L. James Lo, PhD *(University of Texas at Austin)*. Assistant Professor. Computational Fluid Dynamics (CFD) and airflow simulation; Indoor Environmental Quality; Building control integration with building information management systems.

Roger Marino, PhD *(Drexel University)*. Associate Teaching Professor. Fluid mechanics; water resources; engineering education; land development.

Joseph P. Martin, PhD *(Colorado State University)*. Professor. Geotechnical and geoenvironmental engineering; hydrology; transportation; waste management.

James E. Mitchell, MArch *(University of Pennsylvania) Associate Dean for Undergraduate Affairs*. Professor. Architectural engineering design; building systems; engineering education.

Franco Montalto, PhD *(Cornell University)*. Associate Professor. Effects of built infrastructure on societal water needs, ecohydrologic patterns and processes, ecological restoration, green design, water interventions.

Joseph V. Mullin, PhD *(Pennsylvania State University) Associate Department Head*. Teaching Professor. Structural engineering; failure analysis; experimental stress analysis; construction materials; marine structures.

Mira S. Olson, PhD *(University of Virginia) Graduate Studies Advisor*. Associate Professor. Environmental remediation; contaminant and bacterial transport in porous media and bacterial response to dynamic environments.

Michael Ryan, PhD *(Drexel University)*. Assistant Teaching Professor. Microbial Source Tracking (MST); Quantitative Microbial Risk Assessment (QMRA); Dynamic Engineering Systems Modeling; Molecular Microbial Biology; Environmental Statistics; Engineering Economics; Microbiology

Christopher Sales, PhD *(University of California, Berkeley)*. Assistant Professor. Environmental microbiology and biotechnology; biodegradation of environmental contaminants; microbial processes for energy and resource recovery from waste.

Yared Shifferaw, PhD *(Johns Hopkins University)*. Assistant Professor. Computational and experimental mechanics; structural stability; optimization; health monitoring and hazard mitigation; sustainable structures; emerging materials; thin-walled structures and metallic structures.

Kurt Sjoblom, PhD *(Massachusetts Institute of Technology)*. Assistant Professor. Laboratory testing of geomaterials, geotechnical engineering, foundation engineering.

Sabrina Spatari, PhD *(University of Toronto)*. Associate Professor. Research in industrial ecology; development and application of life cycle assessment (LCA) and material flow analysis (MFA) methods for guiding engineering and policy decisions; specific interest in biomass and bioenergy, biofuels, and urban infrastructure.

Robert Swan Associate Teaching Professor. Geotechnical and Geosynthetic Engineering; soil/geosynthetic interaction and performance; laboratory and field geotechnical/geosynthetic testing.

Michael Waring, PhD *(University of Texas-Austin) Associate Department Head for Undergraduate Programs; Director of Architectural Engineering Program*. Associate Professor. Indoor air quality and building sustainability; indoor particulate matter fate and transport; indoor chemistry and particle formation; secondary impacts of control technologies and strategies.

Jin Wen, PhD *(University of Iowa)*. Associate Professor. Architectural engineering; Building Energy Efficiency; Intelligent Building; Net-zero Building; and Indoor Air Quality.

Aspasia Zerva, PhD *(University of Illinois)*. Professor. Earthquake engineering; mechanics; seismology; structural reliability; system identification; advanced computational computational methods in structural analysis.

Emeritus Faculty

Harry G. Harris, PhD *(Cornell University)*. Professor Emeritus. Structural models; dynamics of structures, plates and shells; industrialized building construction.

Richard Weggel, PhD *(University of Illinois) Samuel S. Baxter Professor Emeritus; Civil and Environmental Engineering*. Professor Emeritus. Coastal engineering; hydraulics engineering; hydrology.

Richard Woodring, PhD *(University of Illinois) Dean of Engineering Emeritus*. Professor Emeritus. Structural engineering, reinforced concrete.

Architectural Engineering PhD

Major: Architectural Engineering
Degree Awarded: Doctor of Philosophy (PhD)
Calendar Type: Quarter
Minimum Required Credits: 90.0
Co-op Option: None
Classification of Instructional Programs (CIP) code: 14.0401
Standard Occupational Classification (SOC) code: 11-9041

About the Program

Architectural Engineering is inherently an interdisciplinary enterprise that is centered on the design, construction, and operation of the built environment. Architectural Engineering PhD students includes those with expertise, usually housed in civil/environmental engineering and elsewhere in traditional disciplinary constructs or newly developing fields of focus, in one or more of the following sub-disciplines:

- Building energy efficiency and alternative energy
- Indoor environmental quality

Our graduates are engineers and researchers trained in integrated building design and operation practices, who can work on interdisciplinary teams that are able to develop creative solutions combined with technological advances to produce functional, efficient, attractive and sustainable building infrastructure.

Additional Information

For more information, visit the Doctorate in Architectural Engineering (https://drexel.edu/engineering/academics/graduate-programs/doctoral/architectural-engineering/) and the Department of Civil, Architectural and Environmental Engineering (https://drexel.edu/engineering/academics/departments/civil-architectural-environmental-engineering/) webpage.

Admission Requirements

Applicants to the PhD in Architectural Engineering must meet the following requirements:

- A BS in Engineering OR
- For students without an Engineering degree, the following courses, or their approved equivalents from other departments, will meet these requirements:
  - *Introduction to Fluid Flow* – CIVE 320
  - *Introduction to Thermodynamics* – MEM 210
  - *Heat Transfer* – MEM 345 – for Building Energy students
  - *General Chemistry II* – CHEM 102 – for Indoor Environmental Quality students

The application package will include:

- undergraduate and graduate transcripts
- three letters of recommendation from faculty or professionals who can evaluate the applicant's promise as a graduate student
- GRE scores (optional)
- a written statement of career and educational goals.

Competitive applicants will possess an undergraduate GPA of 3.30 or higher and GRE scores above the 60th percentile.

For more information, visit College of Engineering Graduate Admissions (https://drexel.edu/engineering/admissions/graduate/).

Degree Requirements

The following general requirements must be satisfied to complete the PhD in Architectural Engineering:

- Establishment of plan of study with PhD advisor
- Completion of 90.0 quarter credits (or 45 credit hours post-MS), including taking certain qualifying courses
- Passing of PhD candidacy exam
- Approval of PhD dissertation proposal
- Defense of PhD dissertation

Students entering the PhD program with an approved Master of Science (MS) degree must take 45.0 credit hours of coursework and research to be approved by their PhD advisor. Students entering the PhD program without an approved MS degree can either complete the 45-credit hour Master of Science in Architectural Engineering (MSAE) degree followed by an additional 45 credit hours post MSAE, or they can choose not to obtain the MSAE and complete only the required "core" courses for the PhD degree within the completion of a total 90 required credit hours. Students with previous graduate coursework, may transfer no ore than

15 quarter credits (equivalent to 12 semester credits) from approved institutions if deemed equivalent to courses offered within the department.

All PhD students are required to meet all milestones of the program. The total credit amount, candidacy exam, and dissertation are University Requirements. Additional requirements are determined by the department offering the degree.

Qualifying Courses

To satisfy the qualifying requirements, students must earn a grade of B+ or better in the six required “core” courses taken at Drexel and must earn an overall GPA of 3.5 or better in these courses.

Undergraduate courses, independent studies, research credits, and courses from other departments cannot be counted toward the qualifying requirements. Student progress toward these requirements will be assessed by the PhD advisor following the student's first year in the PhD program. For more information visit the Architectural Engineering's PhD Program Requirements page (https://drexel.edu/engineering/academics/graduate-programs/doctoral/architectural-engineering/).

Candidacy Exam

After approximately one year of study beyond the MS degree or completion of the required “core” courses, if their GPA is # 3.5, PhD students can and must take a candidacy examination, consisting of written and oral parts. Successful completion of the candidacy exam enables a student to progress from the designation of PhD student to PhD candidate. The candidacy exam represents the first exam in a series of three that comprise the PhD curriculum.

The Architectural Engineering candidacy examination serves to define the student’s research domain and to evaluate the student’s knowledge and understanding of various fundamental and foundational results in that domain. The student is expected to be able to read, understand, analyze, and explain advanced technical results in a specialized area of Architectural Engineering at an adequate level of detail. The candidacy examination will evaluate those abilities by asking a student to summarize literature and/or undertake a small research project. The student will prepare a written summary of review and/or project results, present the outcome orally, and answer questions about the report or presentation. The candidacy examination committee will evaluate the written report, the oral presentation, and the student’s answers. The candidacy committee membership must follow the requirements of the Office of Graduate Studies and must be approved by the Office of Graduate Studies.

Students with a GPA < 3.5 do not meet eligibility requirements to sit for the candidacy exam. In this case, a student may petition the Graduate Advisor to take a Preliminary Written Exam (PWE). A committee will be formed consisting of three members selected from the pool of faculty in the field of research interest of the student and the pool of faculty who taught the courses taken by the student during the preceding terms. An exam will be developed consisting of a series of questions/problems prepared by the three written exam committee members. The written exam, while fixed in duration, may be composed of several different problem-solving assignments. Additionally, the exam may be closed book or open book or a combination thereof. The student will consult with the advisor to become acquainted with the specific rules of the exam. The exam will be graded by the PWE Committee to determine if the student may sit for the candidacy exam.

Dissertation Proposal

After successfully completing the candidacy examination, the PhD candidate must prepare a dissertation proposal that outlines, in detail, the specific problems that will be solved during the research that is conducted to complete the PhD dissertation. The quality of the dissertation proposal should be at the level of a peer-reviewed proposal to a federal funding agency, or a publishable scientific paper. The candidate is responsible for sending the dissertation proposal to the PhD committee no less than two weeks before the scheduled oral presentation. The PhD committee membership need not be the same as the candidacy exam committee, but follows the same requirements and must be approved by the Office of Graduate Studies. The oral presentation involves a presentation by the candidate followed by a period during which the committee will ask questions. The committee will then determine if the dissertation proposal has been accepted. The dissertation proposal can be repeated at most once if the proposal was not accepted.

A dissertation proposal must be approved within two years of becoming a PhD candidate. After approval of the dissertation proposal, the committee may meet to review the progress of the research.

Dissertation Defense

After successfully completing the dissertation proposal, the PhD candidate must conduct the necessary research and publish the results in a PhD dissertation. The dissertation must be submitted to the PhD committee no less than two weeks prior to the scheduled oral defense. The oral presentation by the candidate is open to the public, followed by an unspecified period during which the committee will ask questions. The question-and-answer period is not open to the public. The committee will then determine if the candidate has passed or failed the examination. If not passed, the candidate will be granted one more chance to pass the final defense.

The PhD degree is awarded for original research on a significant Architectural Engineering problem. Graduate students will work closely with individual faculty members to purse the PhD degree. PhD dissertation research is usually supported by a research grant from a government agency or an industrial contract. Many doctoral students take three to five years of full-time graduate study to complete their degrees.

Program Requirements

Post Bachelor of Science Degree		
Required Core Courses		**18.0**
AE 510	Intelligent Buildings	
AE 544	Building Envelope Systems	
AE 550	Indoor Air Quality	
AE 551	Building Energy Systems I	
or AE 552	Building Energy Systems II	
MEM 591	Applied Engr Analy Methods I	
MEM 592	Applied Engr Analy Methods II	
Technical Elective Requirements		**0.0-30.0**
To be determined by the PhD faculty advisor and approved by the graduate advisor		
500+ level courses in AE, CIVE, ENVE, or other courses approved by the graduate advisor		
Research Requirements		**71.0-140.0**
Please note that the number of research credits may be reduced based on the number of Technical Electives that are required.		
CIVE 997	Research	
Dissertation Requirements		**1.0-12.0**
CIVE 998	Ph.D. Dissertation	
Total Credits		**90.0-200.0**

Post Master of Science Degree		
Technical Elective Requirements		**0.0-30.0**
To be determined by the PhD faculty advisor and approved by the graduate advisor		
500+ level courses in AE, CIVE, ENVE, or other courses approved by the graduate advisor		
Research Requirements		**44.0-100.0**
Please note that the number of research credits may be reduced based on the number of Technical Electives that are required		
CIVE 997	Research	
Dissertation Requirements		**1.0-12.0**
CIVE 998	Ph.D. Dissertation	
Total Credits		**45.0-142.0**

Sample Plan of Study

Upon entering the PhD program, each student will be assigned an academic advisor, and with the help of the advisor will develop and file a plan of study (which can be brought up to date when necessary). The plan of study should be filed with the graduate advisor and uploaded to the E-Forms system no later than the end of the first term. The Eforms (https://gradcollege.irt.drexel.edu/) system will be used to track program progression and milestones. Sample Plans of Study are presented below:

Post Bachelor of Science Degree

First Year							
Fall	**Credits**	**Winter**	**Credits**	**Spring**	**Credits**	**Summer**	**Credits**

Christopher Sales, PhD *(University of California, Berkeley)*. Assistant Professor. Environmental microbiology and biotechnology; biodegradation of environmental contaminants; microbial processes for energy and resource recovery from waste.

Yared Shifferaw, PhD *(Johns Hopkins University)*. Assistant Professor. Computational and experimental mechanics; structural stability; optimization; health monitoring and hazard mitigation; sustainable structures; emerging materials; thin-walled structures and metallic structures.

Kurt Sjoblom, PhD *(Massachusetts Institute of Technology)*. Assistant Professor. Laboratory testing of geomaterials, geotechnical engineering, foundation engineering.

Sabrina Spatari, PhD *(University of Toronto)*. Associate Professor. Research in industrial ecology; development and application of life cycle assessment (LCA) and material flow analysis (MFA) methods for guiding engineering and policy decisions; specific interest in biomass and bioenergy, biofuels, and urban infrastructure.

Robert Swan Associate Teaching Professor. Geotechnical and Geosynthetic Engineering; soil/geosynthetic interaction and performance; laboratory and field geotechnical/geosynthetic testing.

Michael Waring, PhD *(University of Texas-Austin) Associate Department Head for Undergraduate Programs; Director of Architectural Engineering Program*. Associate Professor. Indoor air quality and building sustainability; indoor particulate matter fate and transport; indoor chemistry and particle formation; secondary impacts of control technologies and strategies.

Jin Wen, PhD *(University of Iowa)*. Associate Professor. Architectural engineering; Building Energy Efficiency; Intelligent Building; Net-zero Building; and Indoor Air Quality.

Aspasia Zerva, PhD *(University of Illinois)*. Professor. Earthquake engineering; mechanics; seismology; structural reliability; system identification; advanced computational computational methods in structural analysis.

Emeritus Faculty

Harry G. Harris, PhD *(Cornell University)*. Professor Emeritus. Structural models; dynamics of structures, plates and shells; industrialized building construction.

Richard Weggel, PhD *(University of Illinois) Samuel S. Baxter Professor Emeritus; Civil and Environmental Engineering*. Professor Emeritus. Coastal engineering; hydraulics engineering; hydrology.

Richard Woodring, PhD *(University of Illinois) Dean of Engineering Emeritus*. Professor Emeritus. Structural engineering, reinforced concrete.

Chemical Engineering MS

Major: Chemical Engineering
Degree Awarded: Master of Science (MS)
Calendar Type: Quarter
Minimum Required Credits: 45.0
Co-op Option: Available for full-time, on-campus, master's-level students
Classification of Instructional Programs (CIP) code: 14.0701
Standard Occupational Classification (SOC) code: 17-2041

About the Program

The graduate program in the Chemical and Biological Engineering department integrates current chemical engineering science with the growing fields of engineering applications and processes, emphasizing engineering design and scientific analysis. The department intends to develop broadly educated individuals who are knowledgeable in modern theories, cognizant of the behavior of engineering systems, and aware of current mathematical and engineering tools that are useful for the solution of problems in complex processes and systems, especially those in the fields of chemical, environmental, biochemical, and materials process engineering. Areas of particular strength include polymer science and engineering, energy and the environment, multiscale modeling and process systems engineering, and biological engineering.

Programs are arranged to meet the needs and interests of individual students. The plan of study is initially formulated in consultation with the departmental graduate advisor and subsequently guided by the thesis advisor. Students are eligible to participate in graduate co-op the Master of Science program. For more information, visit the Drexel Engineering graduate co-op (https://drexel.edu/engineering/academics/experiential-learning-co-op/graduate-co-ops/) and Steinbright Career Development Center's website (http://www.drexel.edu/scdc/co-op/graduate/).

Graduates have pursued a variety of careers ranging from faculty positions in academia to research and development in industry in the U.S. and overseas.

Additional Information

For more information about this program, visit the MS in Chemical Engineering (https://drexel.edu/engineering/academics/graduate-

programs/masters/chemical-engineering/) and Drexel University's Department of Chemical and Biological Engineering (https://drexel.edu/engineering/academics/departments/chemical-biological-engineering/) webpages.

Admission Requirements

Students should fulfill Drexel University's general requirements for admission to graduate studies. The subjects normally included in an undergraduate program in chemical engineering provide a satisfactory background. Decisions regarding prerequisite qualifications for students who may be deficient in some areas are made after consultation with the departmental graduate advisor.

The core courses are designed for students with undergraduate training in chemical engineering; however, students with a background in other disciplines can also enroll in the core courses after completing the necessary basic engineering courses and disciplinary chemical engineering courses. Programs for such students are determined on an individual basis after consultation with the departmental graduate advisor.

Graduate study in Chemical Engineering is offered on a regular full-time basis and on a part-time basis. Details not covered in the following information may be obtained by contacting the departmental graduate advisor. The General (Aptitude) Test of the Graduate Record Examination (GRE) is required for applicants pursuing full-time study.

Financial Assistance

MS positions are not fully funded. Partial support in the form of fellowship grants may be offered with admission. Partial support in the form of teaching assistantships may be available to current students.

Additional Information

For more information on how to apply, visit Drexel's Admissions page for Chemical Engineering (http://www.drexel.edu/grad/programs/coe/chemical-engineering/).

Degree Requirements

In general, each program leading to the Master of Science in Chemical Engineering must meet the following requirements: total, 45.0 credits; core chemical engineering, 15.0 credits; technical electives, at least 15.0 credits; free electives, at most 6.0 credits; thesis or additional technical electives, 9.0 credits. Core courses in the chemical engineering master's program are listed below. A master's thesis is optional.

Thesis option: The thesis may be based on either a theoretical or an experimental investigation or both of limited scope but involving a significant degree of originality. The nature of the research may involve multidisciplinary areas such as biological engineering, materials processing and engineering, energy and the environment, and other topics. The scope and content of the thesis is guided by the thesis advisor. All students pursuing a master's with thesis must complete 9.0 credits of thesis research (CHE 898). At the discretion of the research advisor, up to 12.0 credits of independent study (CHE I799) can be used to fulfill the free and technical elective requirements.

Coursework-only (non-thesis) option: Students not pursuing master's with thesis must complete 24.0 credits of technical electives, 6.0 credits of free electives, and 15.0 credits of core chemical engineering. Students may take up to 21.0 credits of independent study (CHE I799) to fulfill the free and technical elective requirements although independent study is **not** required for a non-thesis master's. Non-thesis students may also take additional concentration electives beyond the required 15.0 credit series. Non-thesis students may **not** register for thesis research.

Concentration: All master's students must complete a 15.0 credit series of technical electives. Technical electives may be chosen from course offerings in chemical engineering, mathematics, science, and other engineering disciplines, and are subject to approval by the departmental graduate advisor. Free (non-concentration) electives need only be graduate level.

Co-op: Students have the option to pursue a co-op as part of their master's program. In conjunction with the Steinbright Career Development Center (http://drexel.edu/scdc/co-op/graduate/), students will be provided an overview of professionalism, resume writing, and the job search process. Co-op will be for a six-month position running in the summer/fall terms. Students will not earn academic credit for the co-op but will earn 9.0 non-academic co-op units per term.

Full-time students usually take the core courses in the first year. Other courses may be substituted for the core courses if equivalent courses are available and if the substitution is approved by the graduate advisor. Full-time students normally require a minimum of one calendar year to complete their study and research.

Program Requirements

Required Core		
CHE 502	Mathematical Methods in Chemical Engineering	3.0
CHE 513	Chemical Engineering Thermodynamics I	3.0
CHE 525	Transport Phenomena I	3.0
CHE 543	Kinetics & Catalysis I	3.0
CHE 554	Process Systems Engineering	3.0
Technical Electives *		**15.0**
Thesis or No-Thesis Option		**9.0**
For Thesis Option:		
CHE 898	Master's Thesis	
For No-Thesis Option:		
Technical Electives		
Free Electives		**6.0**
Optional Co-op Experience **		0-1
COOP 500	Career Management and Professional Development for Master's Degree Students	
Total Credits		**45.0-46.0**

*****

Choose from:

- Any graduate course in the College of Engineering >=500 level
- Any graduate course in STEM disciplines >=500 level
- Graduate courses in these disciplines, subject to advisor approval: AE, BIO, BMES, CAE, CHE (including CHE I799) CHEM, CIVE, CMGT, CS, DSCI, ECE, ECEC, ECET, ECEE, ECES, EET, EGMT, ENTP, ENVP, ENVS, FDSC, GEO, MATE, MEM, PROJ, REAL, SYSE, PENG, MATH, PHYS, SE

******

Co-op is an option for this degree for full-time on-campus students. To prepare for the 6-month co-op experience, students will complete: COOP 500. The total credits required for this degree with the co-op experience is 46.0

Students not participating in the co-op experience will need 45.0 credits to graduate.

Facilities

Abrams Laboratory (Abrams)

Software:

- The Abrams group Github repository (https://github.com/cameronabrams (https://github.com/cameronabrams/))

Computational resources:

- Proteus, Drexel's high-performance cluster
- NSF XSEDE (www.xsede.org (http://www.xsede.org))
- DoD HPCMP (www.hpc.mil (https://www.hpc.mil))

Alvarez Research Group (Alvarez)

- Rheo Filament- VADER1000 - Filament Extensional Rheometer with forced convection oven
- TA DHR3 – Controlled Stress Rheometer with Electronic Heated Platesx
- TA ARES G2 – Controlled Strain Rheometer with Forced Convection Oven
- Controlled Film Coater
- Gel Spinning Apparatus for continuous filament and fiber formation
- Microtensiometer for measurement of dynamic transport of surfactant to fluid-fluid interfaces, including dilatational rheology of equilibrated surfaces.
- Supercritical Microtensiometer for measurement of surfactant transport to fluid-fluid interfaces at elevated pressures
- Nikon TE microscope with 3MP camera and various objectives.
- Fluigent - 4 port continuous pressure fluid pump

Nanomaterials for Energy Applications and Technology Laboratory (Baxter)

- Amplified Ti:Sapphire laser with time-resolved teraherterz spectroscopy and femtosecond UV/vis/NIR transient absorption spectroscopy (Bossone 106)
- Solar simulator with monochromator and photovoltaic/photoelectrochemical test station
- Electrochemical impedance spectroscopy
- Layer-by-layer deposition robot
- Dip coater
- Spin coater
- Electrodeposition station
- Continuous flow microreactors

Chemical Immunomodulation Laboratory (Deak)

- Thermo Attune 2 Laser/7 color flow cytometer with 96 well adapter
- Agilent 1260 HPLC with semi-prep and analytical columns and fractional collector
- BSL-II Hood, Incubator for cell culture
- Nanodrop Photo-spectrophotometer
- Lyopholizer
- -80 C Freezer
- Qubit Fluorometer
- PCR Thermocycler
- Rotoevaporator
- Autoclave
- Probe Sonicator
- LEICA DMiL Light Microscope
- QuantStudio 7 Flex qPCR
- Promega Glo Max Plate Reader
- Allegra 64R Centrifuge

Nanocrystal Solar Laboratory (Fafarman)

- Two chamber fabrication glove box with separate air-purification for wet-chemical synthesis and dry-process fabrication steps, featuring HEPA filtered laminar flow air handling for class-1 cleanroom conditions in an inert atmosphere. In the wet-chemical fabrication chamber there are a spincoater, centrifuge, hot-plates and solid and liquid reagents. On the dry chamber side, there is an integrated thermal evaporator for depositing metal, and a UV-ozone cleaner.
- Custom built Schlenk vacuum/gas manifold, all necessary glassware, J-Kem precision temperature controllers and heating mantles
- Perkin Elmer Lambda 35 UV-vis spectrometer
- ThermoFisher Nicolet iS50R Fourier-transform vis-NIR-MIR absorption spectrometer covering spectral ranges 13000 – 600 and 25000 – 8000 1/cm
- Keithley dual-channel precision source-meter
- Crystalaser Q-switch laser, 300 mW at 532 nm
- Home-built 4-point probe station for thin film electrical conductivity
- 80 MHz digital oscilloscope
- Stanford Research Systems lock-in amplifier

McDonald Research Laboratory (McDonald)

- Agilent HPLC 1260 series with Quadrupole Mass Spec
- Mettler Toledo EasyViewer 100 in situ process microscope
- Integrated reactor system (100 mL to 5 L)

Electrochemical Interfaces and Catalysis Laboratory (Snyder)

- Millipore DI water system
- 302N Autolab Potentiostats (x2)
- Mettler Toledo Micro-Balance
- Ultracentrifuge
- 4 port Schlenk line
- 4 kW Ambrell Radio Frequency Induction Furnace

Process Systems Engineering Laboratory (Soroush)

- Shimadzu GPC
- Mini-Reactors
- Agilent GC/MS
- Fluidized Sand Bath
- IKA-RCT Stirred Hotplate Reactors
- Olympus Microscope
- Shimadzu UV-Vis Spectrophotometer (UV-1700)

Tang Laboratory (Tang)

- Six-channel Bio-Logic SP-300 potentiostat with electrochemical impedance spectroscopy
- LC Technology dual-user glovebox with argon atmosphere. Includes oxygen and water analyzers, electronic feedthroughs, and integrated vacuum oven
- Coin cell crimper /decrimper for battery fabrication (TOB Battery)
- Automatic electrode film coater (TOB Battery)
- Tube furnace
- Vacuum oven
- Karl-Fischer titration apparatus (Mettler Toledo)
- Two rotating disk electrode test station (Pine Instruments) with rotating ring-disk accessories
- 32-channel battery cycler (Arbin)

Program Level Outcomes

- Demonstrate advanced level proficiency in fundamental chemical engineering principles of thermodynamics, transport phenomena, and reaction kinetics.
- Demonstrate advanced level proficiency in engineering mathematics.
- Demonstrate advanced level proficiency in one or more relevant areas of specialization for chemical engineers such as biological engineering, computational engineering, energy, environment and sustainability, polymers, and engineering management.
- Demonstrate the ability to solve unique scientific/engineering problems through independent research that applies experimentation, theory, modeling, and/or simulation (for MS thesis option).

Chemical Engineering Faculty

Cameron F. Abrams, PhD *(University of California, Berkeley)*. Professor. Molecular simulations in biophysics and materials; receptors for insulin and growth factors; and HIV-1 envelope structure and function.

Nicolas Alvarez, PhD *(Carnegie Mellon University)*. Assistant Professor. Phototonic crystal defect chromatography; extensional rheology of polymer/polymer composites; surfactant/polymer transport to fluid and solid interfaces; aqueous lubrication; interfacial instabilities.

Jason Baxter, PhD *(University of California, Santa Barbara)*. Associate Professor. Solar cells, semiconductor nanomaterials, ultrafast spectroscopy.

Richard A. Cairncross, PhD *(University of Minnesota)*. Associate Professor. Effects of microstructure on transport and properties of polymers; moisture transport and degradation on biodegradation on biodegradable polymers; production of biofuel.

Nily R. Dan, PhD *(University of Minnesota)*. Associate Professor. Design of synthetic gene and drug carriers; design of polymeric drug carriers; metal cluster formation in polymeric matrices; colloidal absorption in patterned surfaces.

Aaron Fafarman, PhD *(Stanford University)*. Assistant Professor. Photovoltaic energy conversion; solution-based synthesis of semiconductor thin films; colloidal nanocrystals; electromodulation and photomodulation spectroscopy.

Vibha Kalra, PhD *(Cornell University) Chemical and Biological Engineering*. Assistant Professor. Electrodes for energy storage and conversion; supercapacitors; Li-S batteries; fuel cells; flow batteries; electrospinning for nanofibers; molecular dynamics simulations; Nanotechnology, polymer nanocomposites.

Kenneth K.S. Lau, PhD *(Massachusetts Institute of Technology) Chemical and Biological Engineering*. Associate Professor. Surface science; nanotechnology; polymer thin films and coatings; chemical vapor deposition.

Raj Mutharasan, PhD *(Drexel University) Frank A, Fletcher Professor*. Biochemical engineering; cellular metabolism in bioreactors; biosensors.

Giuseppe R. Palmese, PhD *(University of Delaware) Department Head, Chemical and Biological Engineering*. Professor. Reacting polymer systems; nanostructured polymers; radiation processing of materials; composites and interfaces.

Joshua Snyder, PhD *(Johns Hopkins University)*. Assistant Professor. Electrocatalysis (energy conversion/storage); hetergeneous catalysis corrosion (dealloying nanoporous metals); interfacial electrochemical phenomena in nanostructured materials; colloidal synthesis.

Masoud Soroush, PhD *(University of Michigan)*. Professor. Process systems engineering; polymer engineering.

John H. Speidel, BSHE, MCHE *(University of Delaware; Illinois Institute of Technology)*. Teaching Professor. Chemical process safety; process design engineering.

Maureen Tang, PhD *(University of California, Berkeley)*. Assistant Professor. Batteries and fuel cells; nonaqueous electrochemistry; charge transport at interfaces.

Michael Walters, PhD *(Drexel University)*. Assistant Teaching Professor. Undergraduate laboratory.

Stephen P. Wrenn, PhD *(University of Delaware) Assistant Dean of Graduate Affairs, College of Engineering*. Associate Professor. Biomedical engineering; biological colloids; membrane phase behavior and cholesterol transport.

Emeritus Faculty

Charles B. Weinberger, PhD *(University of Michigan)*. Professor Emeritus. Suspension rheology; fluid mechanics of multi-phase systems.

Chemical Engineering PhD

Major: Chemical Engineering
Degree Awarded: Doctor of Philosophy (PhD)
Calendar Type: Quarter
Minimum Required Credits: 90.0
Co-op Option: None
Classification of Instructional Programs (CIP) code: 14.0701
Standard Occupational Classification (SOC) code: 17-2041

About the Program

The graduate program in the Chemical and Biological Engineering department integrates current chemical engineering science with the growing fields of engineering applications and processes, emphasizing engineering design and scientific analysis. The department intends to develop broadly educated individuals who are knowledgeable in modern theories, cognizant of the behavior of engineering systems, and aware of current mathematical and engineering tools that are useful for the solution of problems in complex processes and systems, especially those in the fields of chemical, environmental, biochemical, and materials process engineering. Areas of particular strength include polymer science and engineering, energy and the environment, multiscale modeling and process systems engineering, and biological engineering.

Programs are arranged to meet the needs and interests of individual students. The plan of study is initially formulated in consultation with the departmental graduate advisor and subsequently guided by the thesis advisor.

Graduates have pursued a variety of careers ranging from faculty positions in academia to research and development in industry in the U.S. and overseas.

Additional Information

For more information about this program, visit Drexel University's Department of Chemical and Biological Engineering (https://drexel.edu/engineering/academics/departments/chemical-biological-engineering/) webpage.

Admission Requirements

Students should fulfill Drexel University's general requirements for admission to graduate studies. The subjects normally included in an undergraduate program in chemical engineering provide a satisfactory background. Decisions regarding prerequisite qualifications for students who may be deficient in some areas are made after consultation with the departmental graduate advisor.

The core courses are designed for students with undergraduate training in chemical engineering; however, students with a background in other disciplines can also enroll in the core courses after completing the necessary basic engineering courses and disciplinary chemical engineering courses. Programs for such students are determined on an individual basis after consultation with the departmental graduate advisor.

Graduate study in Chemical Engineering is offered on a regular full-time basis and on a part-time basis. Details not covered in the following information may be obtained by contacting the departmental graduate advisor. The General (Aptitude) Test of the Graduate Record Examination (GRE) is required for applicants pursuing full-time study.

Financial Assistance

Financial aid in the form of teaching assistantships, research assistantships, and fellowship grants is available to qualified full-time PhD students. Awards are made annually on a competitive basis.

Additional Information

For more information on how to apply, visit Drexel's Admissions page for Chemical Engineering (http://www.drexel.edu/grad/programs/coe/chemical-engineering/).

Degree Requirements

Superior students with MS or BS degrees will be considered for the doctoral program in Chemical Engineering. Students joining with a master's degree may satisfy up to 45.0 credit hours of the PhD course/research credit requirements depending on the courses taken and/or research carried out in their master's programs, subject to approval by the graduate program advisor.

The following general requirements must be satisfied in order to complete the PhD in Chemical Engineering:

- 90.0 credit hours total
- 15.0 core credits
- 12.0 credit hours of specialized plan of study
- 63.0 credit hours of research (including a 3.0 credit research practice course)
- Qualifying exam (2nd term)
- Establishing a plan of study (2nd term)
- Candidacy exam (5th term)
- Dissertation/thesis
- Defense of dissertation/thesis
- GPA requirements: 3.0 overall; 3.0 graduate chemical engineering (CHE) courses; 3.0 core graduate chemical engineering (CHE) courses

Qualifying Exam

The qualifying exam is administered once a year in January at the start of the second term. The objective of the exam is to evaluate proficiency in core undergraduate chemical engineering material. The format is made up of four problems, each covering a core chemical engineering subject at the undergraduate level, including thermodynamics, fluid mechanics, heat/mass transfer, and kinetics and reactor design. Students must demonstrate mastery in all four subjects to pass the qualifying exam. A student can appeal to take a second-chance exam at the end of the second term if the qualifying exam was not satisfactory in the first instance; however, the appeal is not guaranteed and will depend on student's overall performance in coursework, research, and teaching assistant duties.

Program Requirements

Core Requirements		
CHE 502	Mathematical Methods in Chemical Engineering	3.0
CHE 513	Chemical Engineering Thermodynamics I	3.0
CHE 525	Transport Phenomena I	3.0
CHE 543	Kinetics & Catalysis I	3.0
CHE 590	Research Methods and Practices	3.0
Specialized Plan of Study Courses		**12.0**
12.0 credit hours of courses approved by research advisor. All students are expected to develop competence in their area(s) of specialization.		
Research		**63.0**
63.0 credit hours of research, which may include up to 6.0 credit hours of electives.		
CHE 897	Research	
CHE 998	Ph.D. Dissertation	
Total Credits		**90.0**

Candidacy Exam

The components of the candidacy exam are as follows:

- Proposal Document (written): The student is required to write a research proposal of about 15 pages including background, preliminary results, and a research plan (with their advisor's input). The proposal must be submitted to each member of the student's thesis committee and to the graduate program advisor on the first day of the student's fifth term.
- Proposal Defense (oral): The student provides a formal defense of their proposal to their thesis committee before the end of the student's fifth term.

Preliminary Exam

A preliminary exam is targeted at least six months prior to the thesis defense with this scheduling subject to the research advisor's discretion. This preliminary exam is to ensure that the student has made adequate progress in their project. The components of the preliminary exam include:

- Exam Documents (written): The student is required to write an abstract of the preliminary defense talk, a one-page document describing the plan for completing the thesis, a tentative list of the thesis chapter titles, and a current list of publications/presentations. These must be submitted to each member of the student's thesis committee and to the graduate program advisor in advance of the oral exam date.
- Preliminary Defense (oral): The student provides a formal defense of the work to date and the anticipated work to be completed for the thesis to their thesis committee.
- Publications: At a minimum, at least one manuscript (original article) must have been submitted to a refereed journal prior to the oral exam date.

Thesis/Dissertation and Defense

As the culmination of intensive study and independent research, the doctoral dissertation represents a major scholarly endeavor; accordingly, it is recognized as the most important requirement of the degree. All doctoral candidates must present an acceptable dissertation based on significant work. The dissertation must represent a unique contribution to chemical engineering or biochemical engineering knowledge. A final oral examination is conducted, in part, as a defense of the dissertation. The requirements of the thesis/dissertation and defense are:

- Thesis (written): The student is required to write a thesis detailing the entire PhD project, including background, methods, results, discussion, conclusions, and bibliography.
- Defense (oral): The student provides a formal defense of their PhD thesis in an oral examination to their thesis committee.
- Publications: At a minimum, at least one original article must be published in a refereed journal (department's minimum requirement). At the discretion of the research advisor, further publication requirements may be imposed above this minimum.

Nicolas Alvarez, PhD *(Carnegie Mellon University)*. Assistant Professor. Phototonic crystal defect chromatography; extensional rheology of polymer/polymer composites; surfactant/polymer transport to fluid and solid interfaces; aqueous lubrication; interfacial instabilities.

Jason Baxter, PhD *(University of California, Santa Barbara)*. Associate Professor. Solar cells, semiconductor nanomaterials, ultrafast spectroscopy.

Richard A. Cairncross, PhD *(University of Minnesota)*. Associate Professor. Effects of microstructure on transport and properties of polymers; moisture transport and degradation on biodegradation on biodegradable polymers; production of biofuel.

Nily R. Dan, PhD *(University of Minnesota)*. Associate Professor. Design of synthetic gene and drug carriers; design of polymeric drug carriers; metal cluster formation in polymeric matrices; colloidal absorption in patterned surfaces.

Aaron Fafarman, PhD *(Stanford University)*. Assistant Professor. Photovoltaic energy conversion; solution-based synthesis of semiconductor thin films; colloidal nanocrystals; electromodulation and photomodulation spectroscopy.

Vibha Kalra, PhD *(Cornell University) Chemical and Biological Engineering*. Assistant Professor. Electrodes for energy storage and conversion; supercapacitors; Li-S batteries; fuel cells; flow batteries; electrospinning for nanofibers; molecular dynamics simulations; Nanotechnology, polymer nanocomposites.

Kenneth K.S. Lau, PhD *(Massachusetts Institute of Technology) Chemical and Biological Engineering*. Associate Professor. Surface science; nanotechnology; polymer thin films and coatings; chemical vapor deposition.

Raj Mutharasan, PhD *(Drexel University) Frank A, Fletcher Professor*. Biochemical engineering; cellular metabolism in bioreactors; biosensors.

Giuseppe R. Palmese, PhD *(University of Delaware) Department Head, Chemical and Biological Engineering*. Professor. Reacting polymer systems; nanostructured polymers; radiation processing of materials; composites and interfaces.

Joshua Snyder, PhD *(Johns Hopkins University)*. Assistant Professor. Electrocatalysis (energy conversion/storage); hetergeneous catalysis corrosion (dealloying nanoporous metals); interfacial electrochemical phenomena in nanostructured materials; colloidal synthesis.

Masoud Soroush, PhD *(University of Michigan)*. Professor. Process systems engineering; polymer engineering.

John H. Speidel, BSHE, MCHE *(University of Delaware; Illinois Institute of Technology)*. Teaching Professor. Chemical process safety; process design engineering.

Maureen Tang, PhD *(University of California, Berkeley)*. Assistant Professor. Batteries and fuel cells; nonaqueous electrochemistry; charge transport at interfaces.

Michael Walters, PhD *(Drexel University)*. Assistant Teaching Professor. Undergraduate laboratory.

Stephen P. Wrenn, PhD *(University of Delaware) Assistant Dean of Graduate Affairs, College of Engineering*. Associate Professor. Biomedical engineering; biological colloids; membrane phase behavior and cholesterol transport.

Emeritus Faculty

Charles B. Weinberger, PhD *(University of Michigan)*. Professor Emeritus. Suspension rheology; fluid mechanics of multi-phase systems.

Civil Engineering MSCE

Major: Civil Engineering
Degree Awarded: Master of Science in Civil Engineering (MSCE)
Calendar Type: Quarter
Total Credit Hours: 45.0
Co-op Option: MSCE: Available for full-time, on-campus master's-level students
Classification of Instructional Programs (CIP) code: 14.0801
Standard Occupational Classification (SOC) code: 17-2015

About the Program

Objectives

The graduate program in civil engineering offers students the opportunity to develop a more fundamental and complete understanding of the principles that govern their field as well as current design methodology. Students are encouraged to be innovative and imaginative in their quest for recognizing, stating, analyzing and solving engineering problems.

The goal of the Master’s program is to develop technical depth of expertise for a professional career in the planning, design, construction and operation of large-scale infrastructure systems, built facilities, and water resources management.

General Information

The civil engineering programs comprise the following areas of specialization: geotechnical engineering, structural engineering and water resource engineering.

Students in this program are eligible to participate in Graduate Co-op to enhance experience in the field. For more information, visit the Drexel Engineering Graduate Co-op webpage (https://drexel.edu/engineering/academics/experiential-learning-co-op/graduate-co-ops/).

Additional Information

For more information, visit the MS in Civil Engineering program (https://drexel.edu/engineering/academics/graduate-programs/masters/civil-engineering/) and Department of Civil, Architectural and Environmental Engineering (https://drexel.edu/engineering/academics/departments/civil-architectural-environmental-engineering/) webpages.

Admission Requirements

MS admission is based on an academic record demonstrating adequate preparation and potential for successful graduate study. This typically includes a BS from an engineering curriculum accredited by the Accrediting Board for Engineering and Technology (ABET) or the equivalent from a non-U.S. institution. Submission of results from the Graduate Record Exam (GRE) is optional. A grade point average (GPA) of 3.0 is usually required. Graduates who do not have a bachelor's degree in either Civil, Architectural or Environmental Engineering may be required to take preparatory undergraduate courses.

For additional information on how to apply, visit Drexel's Admissions page for Civil Engineering (http://www.drexel.edu/grad/programs/coe/civil-engineering/).

Master of Science in Civil Engineering

The programs of study at the master's level continue the specialization developed at the senior level of the undergraduate program or newly developed interests. The Master of Science in Civil Engineering program may be elected by graduates of ABET-accredited undergraduate programs in civil engineering and related fields. Admission and prerequisites are determined on the basis of a student's undergraduate transcript.

Most MSCE graduates work as professional engineers in consulting firms, industry, or governmental agencies. A number of our graduates have started consulting and construction firms in the Philadelphia area and have been very successful. Other former students hold prominent positions in public utilities, local government agencies, and industry.

Both full- and part-time students are welcome in the MSCE program. The full-time graduate academic program is closely associated with the research efforts of the faculty. Full-time master's degree candidates are encouraged to base their master's thesis on some aspect of faculty research. The one-to-one relationship between student and faculty member provides an invaluable learning experience. The General (Aptitude) Test of the Graduate Record Examination (GRE) is required for applicants pursuing full-time study.

The master's degree requires a total of 45.0 credits, of which 15.0 credits are Required Theme Courses within the major field of interest, 15.0 credits are Core Technical Electives within the major field of interest, and the remaining 15.0 credits are taken as Additional Technical Electives in the related areas or in combination with research and thesis credits or from approved certificate programs (up to a maximum of 15.0 credits). The choice of Core Technical Electives and Additional Technical Elective courses is made in consultation with the student's graduate advisor.

Areas of concentration include:

- Geotechnical Engineering
- Structural Engineering
- Water Resources Engineering

Co-op

Students have the option to pursue a co-op as part of their master's program. In conjunction with the Steinbright Career Development Center, students will be provided an overview of professionalism, resume writing, and the job search process. Co-op will be for a six-month position running in the summer/fall terms. Students will not earn academic credit for the co-op but will earn 9.0 non-academic co-op units per term.

Geotechnical Engineering Requirements

Required Theme Courses *		**15.0**
CIVE 531	Advanced Foundation Engineering	
CIVE 632	Advanced Soil Mechanics	
CIVE 633	Lateral Earth Pressures and Retaining Structures	
CIVE 635	Slope Stability and Landslides	
CIVE 637	Seepage and Consolidation	
Core Technical Electives		**15.0-30.0**
Select from any of the following:		
CIVE 516	Geotechnical Site Investigation	
CIVE 518	Natural Hazards and Infrastructure	
CIVE 605	Advanced Mechanics of Materials	
CIVE 636	Engineering Ground Improvement	
CIVE 639	Applied Finite Element Analysis in Geotechnical Engineering	
CIVE 650	Geosynthetics in Civil Infrastructure	
or CIVE 651	Geosynthetics in Waste Containment	
CIVE 730	Experimental Soil Mechanics I	
or CIVE 731	Experimental Soil Mechanics II	
CIVE 737	Seismic Geotechnics	
CIVE 839	Constitutive Models in Geomechanics	
MATH 520	Numerical Analysis I	
or MATH 52	Numerical Analysis II	
MEM 591	Applied Engr Analy Methods I	
or MEM 592	Applied Engr Analy Methods II	
MEM 681	Finite Element Methods I	
or MEM 682	Finite Element Methods II	
MEM 777	Fracture Mechanics I	
Additional Technical Elective Courses **		**0.0-15.0**
These courses must be approved by the student's advisor and the graduate advisor.		
Select from any of the following or courses from the Core Technical Electives which have not aready been taken for credit.		
CIVE 562	Introduction to Groundwater Hydrology	
CIVE 640	Environmental Geotechnics	
ENVE 555	Geographic Information Systems	
ENVE 727	Risk Assessment	
ENVE 750	Data-based Engineering Modeling	
MEM 660	Theory of Elasticity I	
MEM 663	Continuum Mechanics	
MEM 664	Introduction to Plasticity	
Thesis, Research Project, or additional Graduate Technical Electives ***		**0.0-9.0**
Optional Coop Experience †		**0 - 1**
COOP 500	Career Management and Professional Development for Master's Degree Students	
Total Credits		**45.0-61.0**

*

Must achieve grade of B or better.

**

It should be noted that up to 15 credits from an approved certificate program can be applied to meet the requirements for the “Additional Technical Electives”.

***

For students writing a master’s thesis, nine credits should consist of a minimum of 8 research credits (CIVE 997) and a minimum of 1 thesis credit (CIVE 898). Full time master’s students are encouraged to do a thesis. Students opting not to do a thesis could do a research project which would consist of a minimum of 5 research credits (CIVE 997) and a minimum of 1 thesis credit (CIVE 898) or would require the completion of an additional 9.0 graduate technical elective credits from the list above, therefore, the total graduate technical elective credits required will be 15.0.

†

Co-op is an option for this degree for full-time on-campus students.
To prepare for the 6-month co-op experience, students will complete: COOP 500. The total credits required for this degree with the co-op experience is 46.
Students not participating in the co-op experience will need 45.0 credits to graduate

Structural Engineering Requirements

Required Theme Courses *		**15.0**
CIVE 605	Advanced Mechanics of Materials *	
CIVE 701	Advanced Structural Analysis I	
CIVE 702	Advanced Structural Analysis II	
CIVE 703	Advanced Structural Analysis III	
CIVE 708	Fundamentals of Structural Dynamics	
Core Technical Elective Courses		**15.0-30.0**
Select from any of the following:		
CIVE 510	Prestressed Concrete	
CIVE 511	Advanced Steel Design	
CIVE 512	Wood and Timber Design	
CIVE 513	Introduction to Artificial Intelligence for Smart Structures and Systems	
CIVE 531	Advanced Foundation Engineering	
CIVE 540	Forensic Structural Engineering	
CIVE 615	Infrastructure Condition Evaluation	
CIVE 633	Lateral Earth Pressures and Retaining Structures	
CIVE 639	Applied Finite Element Analysis in Geotechnical Engineering	
CIVE 704	Behavior and Stability of Structural Members I	
CIVE 711	Engineered Masonry I	
CIVE 714	Behavior of Concrete Structures I	
CIVE 839	Constitutive Models in Geomechanics	
MATH 520	Numerical Analysis I	
or MATH 52	Numerical Analysis II	
MEM 591	Applied Engr Analy Methods I	
or MEM 592	Applied Engr Analy Methods II	
MEM 660	Theory of Elasticity I	
MEM 663	Continuum Mechanics	
MEM 664	Introduction to Plasticity	
MEM 681	Finite Element Methods I	
or MEM 682	Finite Element Methods II	
MEM 777	Fracture Mechanics I	
Additional Technical Elective Courses **		**0.0-15.0**
These courses must be approved by the student's advisor and the gradute advisor.		
Select from any of the following or courses from the Core Technical Electives which have not aready been taken for credit.		
AE 510	Intelligent Buildings	
AE 561	Airflow Simulation in Built Environment	
CIVE 520	Advanced Concrete Technology	
ENVE 555	Geographic Information Systems	
ENVE 571	Environmental Life Cycle Assessment	
ENVE 727	Risk Assessment	
ENVE 750	Data-based Engineering Modeling	
Thesis, Research Project, or additional Graduate Technical Electives ***		**0.0-9.0**
Optional Coop Experience †		**0 - 1**
COOP 500	Career Management and Professional Development for Master's Degree Students	
Total Credits		**45.0-61.0**

*

Must achieve grade of B or better.

**

It should be noted that up to 15 credits from an approved certificate program can be applied to meet the requirements for the “Additional Technical Electives”.

***

For students writing an master’s thesis, nine credits should consist of a minimum of 8 research credits (CIVE 997) and a minimum of 1 thesis credit (CIVE 898). Full time master’s students are encouraged to do a thesis. Students opting not to do a thesis could do a research project which would consist of a minimum of 5 research credits (CIVE 997) and a minimum of 1 thesis credit (CIVE 898) or would require the completion of an additional 9.0 graduate technical elective credits from the list above, therefore, the total graduate technical elective credits required will be 21.0.

†

Co-op is an option for this degree for full-time on-campus students.
To prepare for the 6-month co-op experience, students will complete: COOP 500. The total credits required for this degree with the co-op experience is 46.
Students not participating in the co-op experience will need 45.0 credits to graduate

Water Resources Engineering Requirements

Required Theme Courses *		**15.0**
CIVE 564	Sustainable Water Resource Engineering	
CIVE 565	Urban Ecohydraulics	
CIVE 664	Open Channel Hydraulics	
ENVE 681	Analytical and Numerical Techniques in Hydrology	
or CIVE 567	Watershed Analysis	
ENVS 501	Chemistry of the Environment	
Core Technical Courses		**15.0-30.0**
Select from any of the following:		
CIVE 562	Introduction to Groundwater Hydrology	
CIVE 567	Watershed Analysis	
ENVE 660	Chemical Kinetics in Environmental Engineering	
ENVE 661	Env Engr Op-Chem & Phys	
ENVE 665	Hazardous Waste & Groundwater Treatment	
ENVE 727	Risk Assessment	
ENVE 750	Data-based Engineering Modeling	
Additional Technical Elective Courses **		**0.0-15.0**
These courses must be approved by the student's advisor and the graduate advisor.		
Select from any of the following or courses from the Core Technical Electives which have not aready been taken for credit.

Facilities

The Civil, Architectural, and Environmental Engineering Department laboratories provide students with fully equipped space for education and research opportunities.

Structural and Geotechnical Research Laboratory Facilities and Equipment

The geotechnical and structural engineering research labs at Drexel University provide a forum to perform large-scale experimentation across a broad range of areas including infrastructure preservation and renewal, structural health monitoring, geosynthetics, nondestructive evaluation, earthquake engineering, and novel ground modification approaches among others.

The laboratory is equipped with different data acquisition systems (MTS, Campbell Scientific, and National Instruments) capable of recording strain, displacement, tilt, load and acceleration time histories. An array of sensors including LVDTs, wire potentiometers, linear and rotational accelerometers, and load cells are also available. Structural testing capabilities include two 220kips capacity loading frames (MTS 311 and Tinius Olsen), in addition to several medium capacity testing frames (Instron 1331 and 567 and MTS 370 testing frames), two 5-kips MTS actuators for dynamic testing and one degree of freedom 22kips ANCO shake table. The laboratory also features a phenomenological physical model which resembles the dynamic features of common highway bridges and is used for field testing preparation and for testing different measurement devices.

The **Woodring Laboratory** hosts a wide variety of geotechnical, geosynthetics, and materials engineering testing equipment. The geotechnical engineering testing equipment includes Geotac unconfined compression and a triaxial compression testing device, ring shear apparatus, constant rate of strain consolidometer, an automated incremental consolidometer, an automated Geotac direct shear device and a large-scale consolidometer (12" by 12" sample size). Other equipment includes a Fisher pH and conductivity meter as well as a Brookfield rotating viscometer. Electronic and digital equipment include FLIR SC 325 infrared camera for thermal measurements, NI Function generators, acoustic emission sensors and ultrasonic transducers, signal conditioners, and impulse hammers for nondestructive testing.

The geosynthetics testing equipment in the Woodring lab includes pressure cells for incubation and a new differential scanning calorimetry device including the standard-OIT. Materials testing equipment that is available through the materials and chemical engineering departments includes a scanning electron microscope, liquid chromatography, and Fourier transform infrared spectroscopy.

The Building Science and Engineering Group (BSEG) research space is also located in the Woodring Laboratory. This is a collaborative research unit working at Drexel University with the objective of achieving more comprehensive and innovative approaches to sustainable building design and operation through the promotion of greater collaboration between diverse sets of research expertise. Much of the BSEG work is simulation or model based. Researchers in this lab also share some instrumentation with the DARRL lab (see below).

Environmental Engineering Laboratory Facilities and Equipment

The environmental engineering laboratories at Drexel University allow faculty and student researchers access to state-of-the-art equipment needed to execute a variety of experiments. These facilities are located in the Alumni Engineering Laboratory Building and includes approximately 2000 SF shared laboratory space, and a 400 SF clean room for cell culture and PCR.

The major equipment used in this laboratory space consists of: Roche Applied Science LightCyclerÔ 480 Real-time PCR System, Leica fluorescence microscope with phase contrast and video camera, Spectrophotometer, Zeiss stereo microscope with heavy duty boom stand, fluorescence capability, and a SPOT cooled color camera, BIORAD iCycler thermocycler for PCR, gel readers, transilluminator and electrophoresis setups, temperature controlled circulator with immersion stirrers suitable for inactivation studies at volumes up to 2 L per reactor, BSL level 2 fume hood, laminar hood, soil sampling equipment, Percival Scientific environmental chamber (model 1-35LLVL), custom-built rainfall simulator.

The **Drexel Air Resources Research Laboratory (DARRL)** is located in the Alumni Engineering Laboratory Building and contains state-of-the-art aerosol measurement instrumentation including a Soot Particle Aerosol Mass Spectrometer (Aerodyne Research Inc.), mini-Aerosol Mass Spectrometer, (Aerodyne Research Inc.), Scanning Electrical Mobility Sizer (Brechtel Manufacturing), Scanning Mobility Particle Sizer (TSI Inc.), Fast Mobility Particle Sizer (TSI Inc.), Centrifugal Particle Mass Analyzer (Cambustion Ltd.), GC-FID, ozone monitors, and other instrumentation. These instruments are used for the detailed characterization of the properties of particles less than 1 micrometer in diameter including: chemical composition, size, density, and shape or morphology.

In addition to the analytical instrumentation in DARRL, the laboratory houses several reaction chambers. These chambers are used for controlled experiments meant to simulate chemical reactions that occur in the indoor and outdoor environments. The reaction chambers vary in size from 15 L to 1 m3, and allow for a range of experimental conditions to be conducted in the laboratory.

Computer Equipment and Software

The Civil, Architectural, and Environmental Engineering (CAEE) Department at Drexel University has hardware and software capabilities for students to conduct research. The CAEE department operates a computer lab that is divided into two sections; one open access room, and a section dedicated to teaching. The current computer lab has 25 desktop computers that are recently updated to handle resource intensive GIS (Geographic Information Systems) and image processing software. There are a sufficient number of B&W and color laser printers that can be utilized for basic printing purposes.

Drexel University has site-licenses for a number of software, such as ESRITM ArcGIS 10, Visual Studio, SAP 2000, STAAD, Abaqus and MathworksTM Matlab. The Information Resources & Technology (IRT) department at Drexel University provides support (e.g., installation, maintenance and troubleshooting) to the above-mentioned software. It is currently supporting the lab by hosting a software image configuration that provides a series of commonly used software packages, such as MS Office and ADOBE Acrobat among others. As a part of ESRI campus license (the primary maker of GIS applications, i.e. ArcGIS) the department has access to a suite of seated licenses for GIS software with necessary extensions (e.g., LIDAR Analyst) required for conducting research.

Civil, Architectural and Environmental Engineering Faculty

Abieyuwa Aghayere, PhD *(University of Alberta)*. Professor. Structural design - concrete, steel and wood; structural failure analysis; retrofitting of existing structures; new structural systems and materials; engineering education.

A. Emin Aktan, PhD *(University of Illinois at Urbana-Champaign) John Roebling Professor of Infrastructure Studies*. Professor. Structural engineering; health monitoring of large infrastructure systems; infrastructure evaluation; intelligent systems.

Ivan Bartoli, PhD *(University of California, San Diego)*. Associate Professor. Non-destructive evaluation and structural health monitoring; dynamic identification, stress wave propagation modeling.

Robert Brehm, PhD *(Drexel University)*. Associate Teaching Professor. International infrastructure delivery; response to natural catastrophes; risk assessment and mitigation strategies; project management techniques.

S.C. Jonathan Cheng, PhD *(West Virginia University)*. Associate Professor. Soil mechanics; geosynthetics; probabilistic design; landfill containments; engineering education.

Peter DeCarlo, PhD *(University of Colorado)*. Assistant Professor. Outdoor air quality, particulate matter size and composition instrumentation and measurements, source apportionment of ambient particulate matter, climate impacts of particulate matter.

Eugenia Ellis, RA, PhD *(Virginia Polytechnic State University)*. Associate Professor. Extended-care facilities design, research on spatial visualization, perception and imagination.

Patricia Gallagher, PhD *(Virginia Polytechnic Institute)*. Associate Professor. Soil mechanics; geoenvironmental; ground improvement; sustainability.

Patrick Gurian, PhD *(Carnegie-Mellon University)*. Associate Professor. Risk analysis of environmental and infrastructure systems; novel adsorbent materials; environmental standard setting; Bayesian statistical modeling; community outreach and environmental health.

Charles N. Haas, PhD *(University of Illinois-Urbana) L. D. Betz Professor and Department Head, Civil, Architectural and Environmental Engineering*. Professor. Control of human exposures to and risk assessment of pathogenic organisms; water and waste treatment; homeland security.

Ahmad Hamid, PhD *(McMaster University)*. Professor. Engineered masonry; seismic behavior, design and retrofit of masonry structures; development of new materials and building systems.

Y. Grace Hsuan, PhD *(Imperial College)*. Professor. Durability of polymeric construction materials; advanced construction materials; and performance of geosynthetics.

Joseph B. Hughes, PhD *(University of Iowa) Dean of the College of Engineering and Distinguished Professor*. Biological processes and applications of nanotechnology in environmental systems.

L. James Lo, PhD *(University of Texas at Austin)*. Assistant Professor. Computational Fluid Dynamics (CFD) and airflow simulation; Indoor Environmental Quality; Building control integration with building information management systems.

Roger Marino, PhD *(Drexel University)*. Associate Teaching Professor. Fluid mechanics; water resources; engineering education; land development.

Joseph P. Martin, PhD *(Colorado State University)*. Professor. Geotechnical and geoenvironmental engineering; hydrology; transportation; waste management.

James E. Mitchell, MArch *(University of Pennsylvania) Associate Dean for Undergraduate Affairs*. Professor. Architectural engineering design; building systems; engineering education.

Franco Montalto, PhD *(Cornell University)*. Associate Professor. Effects of built infrastructure on societal water needs, ecohydrologic patterns and processes, ecological restoration, green design, water interventions.

Joseph V. Mullin, PhD *(Pennsylvania State University) Associate Department Head*. Teaching Professor. Structural engineering; failure analysis; experimental stress analysis; construction materials; marine structures.

Mira S. Olson, PhD *(University of Virginia) Graduate Studies Advisor*. Associate Professor. Environmental remediation; contaminant and bacterial transport in porous media and bacterial response to dynamic environments.

Michael Ryan, PhD *(Drexel University)*. Assistant Teaching Professor. Microbial Source Tracking (MST); Quantitative Microbial Risk Assessment (QMRA); Dynamic Engineering Systems Modeling; Molecular Microbial Biology; Environmental Statistics; Engineering Economics; Microbiology

Christopher Sales, PhD *(University of California, Berkeley)*. Assistant Professor. Environmental microbiology and biotechnology; biodegradation of environmental contaminants; microbial processes for energy and resource recovery from waste.

Yared Shifferaw, PhD *(Johns Hopkins University)*. Assistant Professor. Computational and experimental mechanics; structural stability; optimization; health monitoring and hazard mitigation; sustainable structures; emerging materials; thin-walled structures and metallic structures.

Kurt Sjoblom, PhD *(Massachusetts Institute of Technology)*. Assistant Professor. Laboratory testing of geomaterials, geotechnical engineering, foundation engineering.

Sabrina Spatari, PhD *(University of Toronto)*. Associate Professor. Research in industrial ecology; development and application of life cycle assessment (LCA) and material flow analysis (MFA) methods for guiding engineering and policy decisions; specific interest in biomass and bioenergy, biofuels, and urban infrastructure.

Robert Swan Associate Teaching Professor. Geotechnical and Geosynthetic Engineering; soil/geosynthetic interaction and performance; laboratory and field geotechnical/geosynthetic testing.

Michael Waring, PhD *(University of Texas-Austin) Associate Department Head for Undergraduate Programs; Director of Architectural Engineering Program*. Associate Professor. Indoor air quality and building sustainability; indoor particulate matter fate and transport; indoor chemistry and particle formation; secondary impacts of control technologies and strategies.

Jin Wen, PhD *(University of Iowa)*. Associate Professor. Architectural engineering; Building Energy Efficiency; Intelligent Building; Net-zero Building; and Indoor Air Quality.

Aspasia Zerva, PhD *(University of Illinois)*. Professor. Earthquake engineering; mechanics; seismology; structural reliability; system identification; advanced computational computational methods in structural analysis.

Emeritus Faculty

Harry G. Harris, PhD *(Cornell University)*. Professor Emeritus. Structural models; dynamics of structures, plates and shells; industrialized building construction.

Richard Weggel, PhD *(University of Illinois) Samuel S. Baxter Professor Emeritus; Civil and Environmental Engineering*. Professor Emeritus. Coastal engineering; hydraulics engineering; hydrology.

Richard Woodring, PhD *(University of Illinois) Dean of Engineering Emeritus*. Professor Emeritus. Structural engineering, reinforced concrete.

Civil Engineering PhD

Major: Civil Engineering
Degree Awarded: Doctor of Philosophy (PhD)
Calendar Type: Quarter
Minimum Required Credits: 90.0
Co-op Option: None
Classification of Instructional Programs (CIP) code: 14.0801

Standard Occupational Classification (SOC) code: 17-2015

About the Program

Objectives

The graduate program in civil engineering offers students the opportunity to develop a more fundamental and complete understanding of the principles that govern their field as well as current design methodology. Students are encouraged to be innovative and imaginative in their quest for recognizing, stating, analyzing and solving engineering problems.

Civil Engineering is inherently an interdisciplinary enterprise that is centered on the design, construction, and operation of the build environment. Civil Engineering PhD graduates may include students with expertise in one or more of the following sub-disciplines (usually housed in civil/environmental engineering and elsewhere in traditional disciplinary constructs or newly developing fields or focus of expertise):

- Structural engineering
- Geotechnical/geosynthetics engineering
- Transportation engineering
- Water resources engineering
- Sustainable engineering

Graduates are engineers and researchers trained in integrated building design and operation practices who can work on interdisciplinary teams that are able to develop creative solutions combined with technological advances to produce functional, efficient, attractive and sustainable building infrastructure.

Additional Information

For more information, visit the Doctorate in Civil Engineering program (https://drexel.edu/engineering/academics/graduate-programs/doctoral/civil-engineering/) and Department of Civil, Architectural and Environmental Engineering (https://drexel.edu/engineering/academics/departments/civil-architectural-environmental-engineering/) webpages.

Admission Requirements

Applicants to the PhD in Civil Engineering must have a minimum of a Bachelor of Science degree. The application package will include:

- undergraduate and graduate transcripts
- three letters of recommendation from faculty or professionals who can evaluate the applicant's promise as a graduate student
- GRE scores (optional)
- a written statement of career and educational goals.

Competitive applicants will possess an undergraduate GPA of 3.30 or higher and GRE scores above the 60th percentile.

For additional information on how to apply, visit Drexel's Admissions page for Civil Engineering (http://www.drexel.edu/grad/programs/coe/civil-engineering/).

Degree Requirements

Requirements

The following general requirements must be satisfied to complete the PhD in Civil Engineering:

- Establishment of plan of study with PhD advisor
- Completion of 90.0 quarter credit hours (or 45 credit hours post-Masters), including taking certain qualifying courses
- Passing of PhD candidacy exam
- Approval of PhD dissertation proposal
- Defense of PhD dissertation

Students entering the PhD program with an approved Master of Science (MS) degree must take 45 credit hours of coursework and research to be approved by their PhD advisor. Students entering the PhD program without an approved MS degree can either complete the 45-credit hour Master of Science in Civil Engineering (MSCE) degree followed by an additional 45 credit hours post MSCI, or they can choose to not obtain the MSCE and complete only the required "core" courses for the PhD degree with the completion of a total of 90 required credit hours. Students with previous graduate coursework may transfer no more than 15 quarter credits (equivalent to 12 semester credit) from approved institutions if deemed equivalent to courses offered within the department.

All PhD students are required to meet all milestones of the program. The total credit amount, candidacy exam, and dissertation are university requirements. Additional requirements are determined by the department offering the degree.

Qualifying Courses

To satisfy the qualifying requirements, students must earn a grade of B + or better in the five required "core" courses (depending on the program of study) taken at Drexel and must earn an overall GPA of 3.5 or better in these courses.

Undergraduate courses, independent studies, research credits, and courses from other departments cannot be counted toward the qualifying requirements. Students progress toward these requirements will be assessed by the PhD advisor following the student's first year in the PhD program. For more information, visit the Civil Engineering's PhD Program Requirements page.

Candidacy Exam

After approximately one year of study beyond the MS degree or completion of the required "core" courses, if their GPA is greater than or equal to 3.5, PhD students can and must take a candidacy examination consisting of written and oral parts. Successful completion of the candidacy exam enables a student to progress from the designation of PhD student to PhD candidate. The candidacy exam represents the first exam in a series of three that comprise the PhD curriculum.

The Civil Engineering candidacy examination serves to define the student's research domain and to evaluate the student's knowledge and understanding of various fundamental and foundational results in that domain. The student is expected to be able to read, understand, analyze, and explain advanced technical results in a specialized area of Civil Engineering at an adequate level of detail. The candidacy examination will evaluate those abilities by asking a student to summarize literature and/or undertake a small research project. The student will prepare a written summary of review and/or project results, present the outcome orally, and answer questions about the report or presentation. The candidacy examination committee will evaluate the written report, the oral presentation, and the student's answers. The candidacy committee membership must follow the requirements of the Office of Graduate Studies and must be approved by the Office of Graduate Studies.

Students with a GPA < 3.5 do not meet eligibility requirements to sit for the candidacy exam. In this case, a student may petition a Graduate Advisor to take a Preliminary Written Exam (PWE). A committee will be formed consisting of three members selected from the pool of faculty in the field of research interest of the student and the pool of faculty who taught the courses taken by the student during the preceding terms. An exam will be developed consisting of a series of questions/problems prepared by the three written exam committee members. The written exam, while fixed in duration, may be composed of several different problem-solving assignments. Additionally, the exam may be closed book or open book or a combination thereof. The student will consult with the advisor to become acquainted with the specific rules of the exam. The exam will be graded by the PWE Committee to determine if the student may sit for the candidacy exam.

Dissertation Proposal

After successfully completing the candidacy examination, the PhD candidate must prepare a dissertation proposal that outlines, in detail, the specific problems that will be solved during the research that is conducted to complete the PhD dissertation. The quality of the dissertation proposal should be at the level of a peer-reviewed proposal to a federal funding agency, or a publishable scientific paper. The candidate is responsible for sending the dissertation proposal to the PhD committee no less than two weeks before the scheduled oral presentation. The PhD committee membership need not be the same as the candidacy exam committee, but it follows the same requirements and must be approved by the Office of Graduate Studies. The oral presentation involves a presentation by the candidate followed by a period during which the committee will ask questions. The committee will then determine if the dissertation proposal has been accepted. The dissertation proposal can be repeated at most once if the proposal was not accepted.

A dissertation proposal must be approved within two years of becoming a PhD candidate. After approval of the dissertation proposal, the committee may meet to review the progress of the research.

Dissertation Defense

After successfully completing the dissertation proposal, the PhD candidate must conduct the necessary research and publish the results in a PhD dissertation. The dissertation must be submitted to the PhD committee no less than two weeks prior to the scheduled oral defense. The oral presentation by the candidate is open to the public, followed by an unspecified period during which the committee will ask questions. The question-and-answer period is not open to the public. The committee will then determine if the candidate has passed or failed the examination. If not passed, the candidate will be granted one more chance to pass the final defense.

The PhD degree is awarded for original research on a significant Civil Engineering problem. Graduate students will work closely with individual faculty members to pursue the PhD degree. PhD dissertation research is usually supported by a research grant from a government agency or an industrial contract. Many doctoral students take three to five years of full-time graduate study to complete their degrees.

Program Requirements

Post Bachelor of Science Degree - Geotechnical Engineering

Required Core Courses		
CIVE 531	Advanced Foundation Engineering	3.0
CIVE 632	Advanced Soil Mechanics	3.0
CIVE 633	Lateral Earth Pressures and Retaining Structures	3.0
CIVE 635	Slope Stability and Landslides	3.0
CIVE 637	Seepage and Consolidation	3.0
Technical Elective Requirements		**0.0-33.0**
To be determined by the PhD faculty advisor and approved by the graduate advisor		
500+ level courses in AE, CIVE, ENVE, or other courses approved by the graduate advisor		
Research Requirements *		
CIVE 997	Research	71.0-140.0
Dissertation Requirements		
CIVE 998	Ph.D. Dissertation	1.0-12.0
Total Credits		**90.0-170.0**

*

Please note that the number of research credits may be reduced based on the number of Technical Electives that are required.

Post Bachelor of Science Degree - Structural Engineering

Required Core Courses		
CIVE 605	Advanced Mechanics of Materials	3.0
CIVE 701	Advanced Structural Analysis I	3.0
CIVE 702	Advanced Structural Analysis II	3.0
CIVE 703	Advanced Structural Analysis III	3.0
CIVE 708	Fundamentals of Structural Dynamics	3.0
Technical Elective Requirements		**0.0-33.0**
To be determined by the PhD faculty advisor and approved by the graduate advisor		
500+ level courses in AE, CIVE, ENVE, or other courses approved by the graduate advisor		
Research Requirements *		
CIVE 997	Research	71.0-140.0
Dissertation Requirements		
CIVE 998	Ph.D. Dissertation	1.0-12.0
Total Credits		**90.0-170.0**

*

Please note that the number of research credits may be reduced based on the number of Technical Electives that are required.

Post Bachelor of Science Degree - Water Resources Engineering

Required Core Courses		
CIVE 564	Sustainable Water Resource Engineering	3.0
CIVE 565	Urban Ecohydraulics	3.0
CIVE 664	Open Channel Hydraulics	3.0
ENVE 681	Analytical and Numerical Techniques in Hydrology	3.0
or CIVE 567	Watershed Analysis	
ENVS 501	Chemistry of the Environment	3.0
Technical Elective Requirements		**0.0-30.0**
To be determined by the PhD faculty advisor and approved by the graduate advisor		
500+ level courses in AE, CIVE, ENVE, or other courses approved by the graduate advisor		
Research Requirements *		
CIVE 997	Research	71.0-140.0
Dissertation Credit Requirements		
CIVE 998	Ph.D. Dissertation	1.0-12.0
Total Credits		**90.0-170.0**

*

Please note that the number of research credits may be reduced based on the number of Technical Electives that are required.

Post Master of Science Degree

Technical Elective Requirements		**0.0-30.0**
To be determined by the PhD faculty advisor and approved by the graduate advisor		
500+ level courses in AE, CIVE, ENVE, or other courses approved by the graduate advisor		
Research Requirements *		
CIVE 997	Research	44.0-100.0
Dissertation Requirements		
CIVE 998	Ph.D. Dissertation	1.0-12.0
Total Credits		**45.0-142.0**

*

Please note that the number of research credits may be reduced based on the number of Technical Electives that are required.

Sample Plan of Study

Upon entering the PhD program, each student will be assigned an academic advisor, and with the help of the advisor will develop and file a plan of study (which can be brought up to date when necessary). The plan of study should be filed with the graduate advisor and uploaded to the E-Forms system no later than the end of the first term. The E-Forms system will be used to track program progression and milestones. Sample Plans of Study are presented below:

Post Bachelor of Science Degree - Geotechnical/Geosynthetics Engineering

Civil, Architectural and Environmental Engineering Faculty

Abieyuwa Aghayere, PhD *(University of Alberta)*. Professor. Structural design - concrete, steel and wood; structural failure analysis; retrofitting of existing structures; new structural systems and materials; engineering education.

A. Emin Aktan, PhD *(University of Illinois at Urbana-Champaign) John Roebling Professor of Infrastructure Studies*. Professor. Structural engineering; health monitoring of large infrastructure systems; infrastructure evaluation; intelligent systems.

Ivan Bartoli, PhD *(University of California, San Diego)*. Associate Professor. Non-destructive evaluation and structural health monitoring; dynamic identification, stress wave propagation modeling.

Robert Brehm, PhD *(Drexel University)*. Associate Teaching Professor. International infrastructure delivery; response to natural catastrophes; risk assessment and mitigation strategies; project management techniques.

S.C. Jonathan Cheng, PhD *(West Virginia University)*. Associate Professor. Soil mechanics; geosynthetics; probabilistic design; landfill containments; engineering education.

Peter DeCarlo, PhD *(University of Colorado)*. Assistant Professor. Outdoor air quality, particulate matter size and composition instrumentation and measurements, source apportionment of ambient particulate matter, climate impacts of particulate matter.

Eugenia Ellis, RA, PhD *(Virginia Polytechnic State University)*. Associate Professor. Extended-care facilities design, research on spatial visualization, perception and imagination.

Patricia Gallagher, PhD *(Virginia Polytechnic Institute)*. Associate Professor. Soil mechanics; geoenvironmental; ground improvement; sustainability.

Patrick Gurian, PhD *(Carnegie-Mellon University)*. Associate Professor. Risk analysis of environmental and infrastructure systems; novel adsorbent materials; environmental standard setting; Bayesian statistical modeling; community outreach and environmental health.

Charles N. Haas, PhD *(University of Illinois-Urbana) L. D. Betz Professor and Department Head, Civil, Architectural and Environmental Engineering*. Professor. Control of human exposures to and risk assessment of pathogenic organisms; water and waste treatment; homeland security.

Ahmad Hamid, PhD *(McMaster University)*. Professor. Engineered masonry; seismic behavior, design and retrofit of masonry structures; development of new materials and building systems.

Y. Grace Hsuan, PhD *(Imperial College)*. Professor. Durability of polymeric construction materials; advanced construction materials; and performance of geosynthetics.

Joseph B. Hughes, PhD *(University of Iowa) Dean of the College of Engineering and Distinguished Professor*. Biological processes and applications of nanotechnology in environmental systems.

L. James Lo, PhD *(University of Texas at Austin)*. Assistant Professor. Computational Fluid Dynamics (CFD) and airflow simulation; Indoor Environmental Quality; Building control integration with building information management systems.

Roger Marino, PhD *(Drexel University)*. Associate Teaching Professor. Fluid mechanics; water resources; engineering education; land development.

Joseph P. Martin, PhD *(Colorado State University)*. Professor. Geotechnical and geoenvironmental engineering; hydrology; transportation; waste management.

James E. Mitchell, MArch *(University of Pennsylvania) Associate Dean for Undergraduate Affairs*. Professor. Architectural engineering design; building systems; engineering education.

Franco Montalto, PhD *(Cornell University)*. Associate Professor. Effects of built infrastructure on societal water needs, ecohydrologic patterns and processes, ecological restoration, green design, water interventions.

Joseph V. Mullin, PhD *(Pennsylvania State University) Associate Department Head*. Teaching Professor. Structural engineering; failure analysis; experimental stress analysis; construction materials; marine structures.

Mira S. Olson, PhD *(University of Virginia) Graduate Studies Advisor*. Associate Professor. Environmental remediation; contaminant and bacterial transport in porous media and bacterial response to dynamic environments.

Michael Ryan, PhD *(Drexel University)*. Assistant Teaching Professor. Microbial Source Tracking (MST); Quantitative Microbial Risk Assessment (QMRA); Dynamic Engineering Systems Modeling; Molecular Microbial Biology; Environmental Statistics; Engineering Economics; Microbiology

Christopher Sales, PhD *(University of California, Berkeley)*. Assistant Professor. Environmental microbiology and biotechnology; biodegradation of environmental contaminants; microbial processes for energy and resource recovery from waste.

Yared Shifferaw, PhD *(Johns Hopkins University)*. Assistant Professor. Computational and experimental mechanics; structural stability; optimization; health monitoring and hazard mitigation; sustainable structures; emerging materials; thin-walled structures and metallic structures.

Kurt Sjoblom, PhD *(Massachusetts Institute of Technology)*. Assistant Professor. Laboratory testing of geomaterials, geotechnical engineering, foundation engineering.

Sabrina Spatari, PhD *(University of Toronto)*. Associate Professor. Research in industrial ecology; development and application of life cycle assessment (LCA) and material flow analysis (MFA) methods for guiding engineering and policy decisions; specific interest in biomass and bioenergy, biofuels, and urban infrastructure.

Robert Swan Associate Teaching Professor. Geotechnical and Geosynthetic Engineering; soil/geosynthetic interaction and performance; laboratory and field geotechnical/geosynthetic testing.

Michael Waring, PhD *(University of Texas-Austin) Associate Department Head for Undergraduate Programs; Director of Architectural Engineering Program*. Associate Professor. Indoor air quality and building sustainability; indoor particulate matter fate and transport; indoor chemistry and particle formation; secondary impacts of control technologies and strategies.

Jin Wen, PhD *(University of Iowa)*. Associate Professor. Architectural engineering; Building Energy Efficiency; Intelligent Building; Net-zero Building; and Indoor Air Quality.

Aspasia Zerva, PhD *(University of Illinois)*. Professor. Earthquake engineering; mechanics; seismology; structural reliability; system identification; advanced computational computational methods in structural analysis.

Emeritus Faculty

Harry G. Harris, PhD *(Cornell University)*. Professor Emeritus. Structural models; dynamics of structures, plates and shells; industrialized building construction.

Richard Weggel, PhD *(University of Illinois) Samuel S. Baxter Professor Emeritus; Civil and Environmental Engineering*. Professor Emeritus. Coastal engineering; hydraulics engineering; hydrology.

Richard Woodring, PhD *(University of Illinois) Dean of Engineering Emeritus*. Professor Emeritus. Structural engineering, reinforced concrete.

Computer Engineering MS

Major: Computer Engineering
Degree Awarded: Master of Science (MS)
Calendar Type: Quarter
Minimum Required Credits: 45.0
Co-op Option: Available for full-time, on-campus master's-level students
Classification of Instructional Programs (CIP) code: 14.0901
Standard Occupational Classification (SOC) code: 15-1132; 15-1133; 15-1143; 17-2031

About the Program

The Master of Science in Computer Engineering program at Drexel University is a comprehensive and flexible curriculum designed to meet the diverse needs of students and prepare them for the rapidly evolving field of computer engineering. The program aims to:

- Accommodate students from various academic backgrounds
- Provide flexibility for a broad understanding with opportunities for specialization in key areas
- Prepare students for a real-world technological environment
- Equip students with skills to adapt to new technologies and trends

The degree requires a minimum of 45.0 approved credits. The curriculum is customizable, with students developing their plan of study in consultation with their academic advisor.

The program aims to prepare professionals for advanced careers in research or industry, addressing complex challenges in computer engineering. Students work on various aspects of computer systems, including components, devices, programs, algorithms, and implementation techniques. The curriculum emphasizes the importance of comprehensive solutions in this interdisciplinary field.

Graduates of the program will gain:

- Advanced knowledge in computer engineering
- A global perspective on industry advancements
- Entrepreneurial and team-building skills
- Preparation for career advancement or doctoral studies

This holistic approach ensures that students are well-equipped to tackle the complex issues and demands of the computer engineering field in today's technological landscape.

Students also have the option to engage in research under the supervision of an ECE faculty member. A total of 9.0 credits of research-oriented coursework may be counted towards the minimum credit hour requirement of the degree program. These credits are considered general electives.

The MS program is designed so that a student may complete the degree requirements in less than 2 years of full-time study or 2-3 years of part-time study.

Full-time on-campus students who start in a fall term are eligible to take part in the Graduate Co-op Program, which combines classroom coursework with a 6-month, full-time work experience. For more information, visit the Steinbright Career Development Center's website or visit the Drexel Engineering Graduate Co-op webpage.

Additional Information

For more information, visit the MS in Computer Engineering program (https://drexel.edu/engineering/academics/graduate-programs/masters/computer-engineering/) and Department of Electrical and Computer Engineering (https://drexel.edu/engineering/academics/departments/electrical-computer-engineering/) website.

Admission Requirements

Applicants should have an undergraduate degree equivalent to a US bachelor's degree in computer engineering, computer science, or electrical engineering. Students holding degrees in other engineering and science disciplines with appropriate coursework or training will also be considered.

Appropriate coursework includes experience with the following topics: Software (advanced programming and operating systems); Computer Architecture (digital systems design, computer organization and architecture); Algorithms and Data Structures; Computer Networks. Students must have a minimum 3.0 GPA (on a 4.0 scale) for the last two years of undergraduate studies, as well as for any subsequent graduate-level work.

The GRE general test is optional for all applicants. TOEFL, IELTS, PTE, or Duolingo is required if the language of instruction of your previous degree was not English.

For additional information on how to apply and deadlines, visit the College of Engineering's Admission Guidelines (https://drexel.edu/engineering/admissions/graduate/admission-guidelines/) or Drexel's admissions page for Computer Engineering (https://drexel.edu/academics/grad-professional-programs/engineering/computer-engineering/).

Degree Requirements

The Master of Science in Computer Engineering curriculum encompasses 45.0 approved credit hours, chosen in accordance with the following

requirements and a plan of study arranged with the departmental graduate advisor in consultation with the student's research advisor, if applicable. Before the end of the first quarter in the Department of Electrical and Computer Engineering, for a full-time student, or by the end of the first year for a part-time student, said plan of study must be filed and approved with the departmental graduate advisor.

A total of at least 30.0 credit hours must be taken from among the graduate course offerings of the Department of Electrical and Computer Engineering. These credits must be taken at Drexel University. No transfer credit may be used to fulfill these requirements, regardless of content equivalency.

The remaining courses needed to reach the minimum credit hour requirement for the degree program are considered elective courses. Elective courses can be chosen from among the graduate course offerings of the Department of Electrical and Computer Engineering; other departments within the College of Engineering; the School of Biomedical Science, Engineering and Health Systems; the Department of Mathematics; the Department of Physics; the Department of Chemistry, the Department of Biology, and the Department of Computer Science. In order to have courses outside of these departments and schools count towards degree completion, they must be approved by the departmental graduate advisors prior to registration for said courses.

Please note that ECEC 500 *Fundamentals of Computer Hardware* and ECEC 600 *Fundamentals of Computer Networks* do **not** count toward the credit requirements to complete the MS in Electrical Engineering degree program.

Computer Engineering Core Courses		
Select 21.0 credits from the list below:		21.0
ECE 506	Hands on Computer Networks	
ECE 600	Applied Robotics Laboratory	
ECE 603	Computing and Control	
ECE 608	Decision-Making for Robotics	
ECE 609	Mobile Sensing and Motion Planning	
ECE 610	Machine Learning & Artificial Intelligence	
ECE 612	Applied Machine Learning Engineering	
ECE 613	Neuromorphic Computing	
ECE 617	Reinforcement Learning	
ECE 630	Software Defined Radio Laboratory	
ECE 686	Cell & Tissue Image Analysis	
ECE 687	Pattern Recognition	
ECES 643	Digital Control Systems Analysis & Design	
ECES 644	Computer Control Systems	
ECES 681	Fundamentals of Computer Vision	
ECES 682	Fundamentals of Image Processing	
Any ECEC (Elec & Comp Engr-Computers) 500-999 course		
General Electrical and Computer Engineering (ECE) Courses		
Select 9 credits of 500-999 level courses from the list below:		9.0
Any ECE (Electrical & Computer Eng) course		
Any ECEC (Elec & Comp Engr-Computers) course		
Any ECEE (Elec & Computer Engr-Electroph) course		
Any ECEP (Elec & Computer Engr-Power Eng) course		
Any ECES (Elec & Computer Engr-Systems) course		
Any ECET (Telecommunications) course		
Mathematical Foundations Requirement		
6.0 credits from one of the following courses must be included within (not in addition to) the 45.0 total required MS credits:		
CS 525	Theory of Computation	
CS 567	Applied Symbolic Computation	
CS 583	Introduction to Computer Vision	
CS 613	Machine Learning	
CS 621	Approximation Algorithms	
CS 623	Computational Geometry	
ECES 510	Analytical Methods in Systems	
ECES 511	Fundamentals of Systems I	
ECES 512	Fundamentals of Systems II	
ECES 513	Fundamentals of Systems III	
ECES 521	Probability & Random Variables	
ECES 522	Random Process & Spectral Analysis	
ECES 523	Detection & Estimation Theory	
ECES 631	Fundamentals of Deterministic Digital Signal Processing	
ECES 811	Optimization Methods for Engineering Design	
ECET 602	Information Theory and Coding	
OPR 624	Advanced Mathematical Program	
OPR 992	Applied Math Programming	
Any MATH (Mathematics) 500-999 course		
Elective Courses		
Select 15 credits of 500-999 level courses from the list below:		15.0
Any AE (Architectural Engineering) course		
Any BIO (Bioscience & Biotechnology) course		
Any BMES (Biomedical Engineering & Sci) course		
Any CHE (Chemical Engineering) course		
Any CHEM (Chemistry) course		
Any CIVE (Civil Engineering) course		
Any CMGT (Construction Management) course		
Any CS (Computer Science) course		
Any ECE (Electrical & Computer Eng) course		
Any ECEC (Elec & Comp Engr-Computers) course		
Any ECEE (Elec & Computer Engr-Electroph) course		
Any ECEP (Elec & Computer Engr-Power Eng) course		
Any ECES (Elec & Computer Engr-Systems) course		
Any ECET (Telecommunications) course		
Any EGMT (Engineering Management) course		
Any ENTP (Entrepreneurship & Innovation) course		
Any ENVE (Environmental Engineering) course		
Any ET (Engineering Technology) course		
Any MATE (Materials Engineering) course		
Any MATH (Mathematics) course		
Any MEM (Mechanical Engr & Mechanics) course		
Any MGMT (Management) course		
Any MIS (Management Information Systems) course		
Any OPR (Operations Research) course		
Any PHYS (Physics) course		
Any PROJ (Project Management) course		
Any SYSE (Systems Enineering) course		
Optional Co-op Experience *		**0-1**
COOP 500	Career Management and Professional Development for Master's Degree Students	
Total Credits		**45.0-46.0**

*****

Co-op is an option for this degree for full-time on-campus students.
To prepare for the 6-month co-op experience, students will complete: COOP 500. The total credits required for this degree with the co-op experience is 46.0
Students not participating in the co-op experience will need 45.0 credits to graduate.

Options for Degree Fulfillment

Although not required, students are encouraged to complete a Master's Thesis as part of the MS studies. Those students who choose the thesis

option may count up to 9.0 research/thesis credits as part of their required credit hour requirements.

Students may choose to participate in the Graduate Co-Op Program working on curriculum related projects. Graduate Co-op enables graduate students to alternate class terms with a six-month period of hands-on experience, gaining access to employers in their chosen industries. Whether co-op takes students throughout the United States or abroad, they are expanding their professional networks, enhancing their resumes, and bring that experience back to the classroom and their peers.

For more information on curricular requirements, visit the Department of Electrical and Computer Engineering's (https://drexel.edu/engineering/academics/departments/electrical-computer-engineering/?_gl=1*1rgm25a*_ga*OTEwNTAxODM1LjE2NjQ0NjE3MzI.*_ga_6KJ1PNLE19*MTY4NDc1MjkxNS42MzIuMS4xNjg1NTUzMTQ5LjQwLjAuMA..) website.

Facilities

Drexel University and the Electrical and Computer Engineering Department are nationally recognized for a strong history of developing innovative research. Research programs in the ECE Department prepare students for careers in research and development, and aim to endow graduates with the ability to identify, analyze, and address new technical and scientific challenges. The ECE Department is well equipped with state-of-the-art facilities in each of the following ECE Research laboratories:

Research Laboratories at the ECE Department

Adaptive Signal Processing and Information Theory Research Group

The Adaptive Signal Processing and Information Theory Research Group conducts research in the area of signal processing and information theory. Our main interests are belief/expectation propagation, turbo decoding and composite adaptive system theory. We are currently doing projects on the following topics:

- Delay mitigating codes for network coded systems
- Distributed estimation in sensor networks via expectation propagation
- Turbo speaker identification
- Performance and convergence of expectation propagation
- Investigating bounds for SINR performance of autocorrelation based channel shorteners

Applied Networking Research Lab

Applied Networking Research Lab (ANRL) projects focus on modeling and simulation as well as experimentation in wired, wireless and sensor networks. ANRL is the home of MuTANT, a Multi-Protocol Label Switched Traffic Engineering and Analysis Testbed composed of 10 high-end Cisco routers and several PC-routers, also used to study other protocols in data networks as well as automated network configuration and management. The lab also houses a sensor network testbed.

Bioimage Laboratory

Uses computer gaming hardware for enhanced and affordable 3-D visualization, along with techniques from information theory and machine learning to combine the exquisite capabilities of the human visual system with computational sensing techniques for analyzing vast quantities of image sequence data.

Data Fusion Laboratory

The Data Fusion Laboratory investigates problems in multisensory detection and estimation, with applications in robotics, digital communications, radar, and target tracking. Among the projects in progress: computationally efficient parallel distributed detection architectures, data fusion for robot navigation, modulation recognition and RF scene analysis in time-varying environments, pattern recognition in biological data sequences and large arrays, and hardware realizations of data fusion architectures for target detection and target tracking.

Drexel Network Modeling Laboratory

The Drexel Network Modeling Laboratory investigates problems in the mathematical modeling of communication networks, with specific focus on wireless ad hoc networks, wireless sensor networks, and supporting guaranteed delivery service models on best effort and multipath routed networks. Typical methodologies employed in our research include mathematical modeling, computer simulation, and performance optimization, often with the end goal of obtaining meaningful insights into network design principles and fundamental performance tradeoffs.

Drexel University Nuclear Engineering Education Laboratory

The field of nuclear engineering encompasses a wide spectrum of occupations, including nuclear reactor design, medical imaging, homeland security, and oil exploration.The Drexel University Nuclear Engineering Education Laboratory (DUNEEL) provides fundamental hands on understanding for power plant design and radiation detection and analysis.Software based study for power plant design, as well as physical laboratory equipment for radiation detection, strengthen the underlying concepts used in nuclear engineering such that the student will comprehend and appreciate the basic concepts and terminology used in various nuclear engineering professions. Additionally, students use the laboratory to develop methods for delivering remote, live time radiation detection and analysis. The goal of DUNEEL is to prepare students for potential employment in the nuclear engineering arena.

Drexel VLSI Laboratory

The Drexel VLSI Laboratory investigates problems in the design, analysis, optimization and manufacturing of high performance (low power, high throughput) integrated circuits in contemporary CMOS and emerging technologies. Suited with industrial design tools for integrated circuits, simulation tools and measurement beds, the VLSI group is involved with digital and mixed-signal circuit design to verify the functionality of the discovered novel circuit and physical design principles. The Drexel VLSI laboratory develops design methodologies and automation tools in these areas, particularly in novel clocking techniques, featuring resonant clocking, and interconnects, featuring wireless interconnects.

Drexel Wireless Systems Laboratory

The Drexel Wireless Systems Laboratory (DWSL) contains an extensive suite of equipment for constructing, debugging, and testing prototype wireless communications systems. Major equipment within DWSL includes:

- software defined radio network testbeds for rapidly prototyping new communications and network systems,
- electromagnetic anechoic chamber and reverberation chambers for testing new wireless technologies,
- experimental cell tower for field testing new wireless technologies.

The lab is also equipped with network analyzers, high speed signal generators, oscilloscopes, and spectrum analyzers as well as several Zigbee development platforms for rapidly prototyping sensor networks. The lab offers laboratory coursework in wireless network security, collaborative intelligent radio networks, and fundamental analog and digital communication systems.

Ecological and Evolutionary Signal-processing and Informatics Laboratory

The Ecological and Evolutionary Signal-processing and Informatics Laboratory (EESI) seeks to solve problems in high-throughput genomics and engineer better solutions for biochemical applications. The lab's primary thrust is to enhance the use of high-throughput DNA sequencing technologies with pattern recognition and signal processing techniques. Applications include assessing the organism content of an environmental sample, recognizing/classifying potential and functional genes, inferring environmental factors and inter-species relationships, and inferring microbial evolutionary relationships from short-read DNA/RNA fragments. The lab also investigates higher-level biological systems such as modeling and controlling chemotaxis, the movement of cells.

Electric Power Engineering Center

This newly established facility makes possible state-of-the-art research in a wide variety of areas, ranging from detailed theoretical model study to experimental investigation in its high voltage laboratories. The mission is to advance and apply scientific and engineering knowledge associated with the generation, transmission, distribution, use, and conservation of electric power. In pursuing these goals, this center works with electric utilities, state and federal agencies, private industries, nonprofit organizations and other universities on a wide spectrum of projects. Research efforts, both theoretical and experimental, focus on the solution of those problems currently faced by the electric power industry. Advanced concepts for electric power generation are also under investigation to ensure that electric power needs will be met at the present and in the future.

Electronic Design Automation Facility

Industrial-grade electronic design automation software suite and intergrated design environment for digital, analog and mixed-signal systems development. Field Programmable Gate Array (FPGA) development hardware. Most up-to-date FPGA/embedded system development hardware kits. Printed circuit board production facility. Also see Drexel VLSI Laboratory.

Microwave-Photonics Device Laboratories

The laboratory is equipped with test and measurement equipment for high-speed analog and digital electronics and fiber optic systems. The test equipment includes network analyzers from Agilent (100kHz- 1.3 GHz and 45 Mhz-40 GHz), and Anritsu (45 MHz-6 GHz); spectrum analyzers from Tektronix, HP, and Agilent with measurement capability of DC to 40 GHz and up to 90 GHz using external mixers; signal generators and communication channel modulators from HP, Rhode-Schwartz, Systron Donner, and Agilent; microwave power meter and sensor heads, assortment of passive and active microwave components up to 40 GHz ; data pattern generator and BER tester up to 3Gb/s; optical spectrum analyzer from Anritsu and power meters from HP; single and multimode fiber optic based optical transmitter and receiver boards covering ITU channels at data rates up to 10Gb/s; passive optical components such as isolator, filter, couplers, optical connectors and fusion splicer; LPKF milling machine for fabrication of printed circuit boards; wire-bonding and Cascade probe stations; Intercontinental test fixtures for testing of MMIC circuits and solid-state transistors; state-of-the-art microwave and electromagnetic CAD packages such as Agilent ADS, ANSYS HFSS, and COMSOL multi-physics module.

Multimedia & Information Security Lab [MISL]

The Multimedia and Information Security Lab (MISL) develops algorithms to detect fake images and videos, along with algorithms to determine the true source an image or video. This research is particularly important because widely available editing software enables multimedia forgers to create perceptually realistic forgeries. Our goal at MISL, is to conduct research that provides information verification and security in scenarios when an information source cannot be trusted.

The research conducted at MISL is part of a new area, known as multimedia forensics, which lies at the intersection of many areas in machine learning and artificial intelligence, signal processing, image and video processing, game theory, etc. Our algorithms work by identifying or learning visually imperceptible traces left in images and videos by processing operations. We use these traces to detect editing or forgery as well as to link an image or video back to the camera that captured it. We also perform research on anti-forensic operations designed to fool forensic techniques. By studying anti-forensics, researchers can

identify and address weaknesses in existing forensic techniques as well as develop techniques capable of identifying the use of anti-forensics.

Music and Entertainment Technology Laboratory

The Music and Entertainment Technology Laboratory (MET-lab) is devoted to research in digital media technologies that will shape the future of entertainment, especially in the areas of sound and music. We employ digital signal processing and machine learning to pursue novel applications in music information retrieval, music production and processing technology, and new music interfaces. The MET-lab is also heavily involved in outreach programs for K-12 students and hosts the Summer Music Technology program, a one-week learning experience for high school students. Lab facilities include a sound isolation booth for audio and music recording, a digital audio workstation running ProTools, two large multi-touch display interfaces of our own design, and a small computing cluster for distributed processing.

NanoPhotonics+ Lab

Our research is primarily in the area of nanophotonics with a focus on the nanoscale interaction of light with matter. Interests include: liquid crystal/polymer composites for gratings, lenses and HOEs; liquid crystal interactions with surfaces and in confined nanospaces; alternative energy generation through novel photon interactions; ink-jet printed conducting materials for RF and photonic applications; and the creation and development of smart textiles technologies including soft interconnects, sensors, and wireless implementations.

Opto-Electro-Mechanical Laboratory

This lab concentrates on the system integration on optics, electronics, and mechanical components and systems, for applications in imaging, communication, and biomedical research. Research areas include: Programmable Imaging with Optical Micro-electrical-mechanical systems (MEMS), in which microscopic mirrors are used to image light into a single photodetector; Pre-Cancerous Detection using White Light Spectroscopy, which performs a cellular size analysis of nuclei in tissue; Free-space Optical Communication using Space Time Coding, which consists of diffused light for computer-to-computer communications, and also tiny lasers and detectors for chip-to-chip communication; Magnetic Particle Locomotion, which showed that particles could swim in a uniform field; and Transparent Antennas using Polymer, which enables antennas to be printed through an ink-jet printer.

Plasma and Magnetics Laboratory

Research is focused on applications of electrical and magnetic technologies to biology and medicine. This includes the subjects of non-thermal atmospheric pressure plasma for medicine, magnetic manipulation of particles for drug delivery and bio-separation, development of miniature NMR sensors for cellular imaging and carbon nanotube cellular probes.

Power Electronics Research Laboratory

The Power Electronics Research Laboratory (PERL) is involved in circuit and design simulation, device modeling and simulation, and experimental testing and fabrication of power electronic circuits. The research and development activities include electrical terminations, power quality, solar photovoltaic systems, GTO modeling, protection and relay coordination, and solid-state circuit breakers. The analysis tools include EMPT, SPICE, and others, which have been modified to incorporate models of such controllable solid-state switches as SCRs, GTOs, and MOSFETs. These programs have a wide variety and range of modeling capabilities used to model electromagnetics and electromechanical transients ranging from microseconds to seconds in duration. The PERL is a fully equipped laboratory with 42 kVA AC and 70 kVA DC power sources and data acquisition systems, which have the ability to display and store data for detailed analysis. Some of the equipment available is a distribution and HV transformer and three phase rectifiers for power sources and digital oscilloscopes for data measuring and experimental analysis. Some of the recent studies performed by the PERL include static VAR compensators, power quality of motor controllers, solid-state circuit breakers, and power device modeling which have been supported by PECO, GE, Gould, and EPRI.

Program Level Outcomes

Upon completion of the program, graduates will be prepared to:

- Apply knowledge of mathematics, science, and engineering
- Design and conduct experiments, as well as to analyze and interpret data
- Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- Function on multidisciplinary teams
- Identify, formulate, and solve engineering problems
- Understand professional and ethical responsibility
- Communicate effectively
- Understand the impact of engineering solutions in a global, economic, environmental, and societal context
- Recognize the need for, and an ability to engage in life-long learning
- Attain knowledge of contemporary issues
- Use the techniques, skills, and modern engineering tools necessary for engineering practice

Computer Engineering Faculty

Suryadevara Basavaiah, PhD *(University of Pennsylvania)*. Teaching Professor. Computer engineering; computer engineering education; custom circuit design; VLSI technology; process and silicon fabrication

Tom Chmielewski, PhD *(Drexel University)*. Assistant Teaching Professor. Modeling and simulation of electro-mechanical systems; optimal, adaptive and non-linear control; DC motor control; system identification; kalman filters (smoothing algorithms, tracking); image processing; robot design; biometric technology and design of embedded systems for control applications utilizing MATLAB and SIMULINK

Fernand Cohen, PhD *(Brown University)*. Professor. Surface modeling; tissue characterization and modeling; face modeling; recognition and tracking.

Andrew Cohen, PhD *(Rensselaer Polytechnic Institute)*. Associate Professor. Image processing; multi-target tracking; statistical pattern recognition and machine learning; algorithmic information theory; 5-D visualization

Kapil Dandekar, PhD *(University of Texas-Austin) Director of the Drexel Wireless Systems Laboratory (DWSL); Associate Dean of Research, College of Engineering*. Professor. Cellular/mobile communications and wireless LAN; smart antenna/MIMO for wireless communications; applied computational electromagnetics; microwave antenna and

receiver development; free space optical communication; ultrasonic communication; sensor networks for homeland security; ultrawideband communication.

Afshin Daryoush, ScD *(Drexel University)*. Professor. Digital and microwave photonics; nonlinear microwave circuits; RFIC; medical imaging.

Bruce A. Eisenstein, PhD *(University of Pennsylvania) Vice Dean, College of Engineering; Arthur J. Rowland Professor*. Professor. Pattern recognition; estimation; decision theory.

Adam K. Fontecchio, PhD *(Brown University) Vice Dean, Graduate College*. Professor. Electro-optics; remote sensing; active optical elements; liquid crystal devices.

Gary Friedman, PhD *(University of Maryland-College Park)*. Professor. Biological and biomedical applications of nanoscale magnetic systems.

Eli Fromm, PhD *(Jefferson Medical College) LeRoy A. Brothers University Professor / Director for Center of Educational Research*. Professor. Engineering education; academic research policy; bioinstrumentation; physiologic systems.

Edwin L. Gerber, PhD *(University of Pennsylvania)*. Professor. Computerized instruments and measurements; undergraduate engineering education.

Allon Guez, PhD *(University of Florida)*. Professor. Intelligent control systems; robotics, biomedical, automation and manufacturing; business systems engineering.

Peter R. Herczfeld, PhD *(University of Minnesota) Lester A. Kraus Professor/Director, Center for Microwave/Lightwave Engineering*. Professor. Lightwave technology; microwaves; millimeter waves; fiberoptic and integrated optic devices.

Leonid Hrebien, PhD *(Drexel University)*. Professor. Tissue excitability; acceleration effects on physiology; bioinformatics.

Nagarajan Kandasamy, PhD *(University of Michigan) Associate Department Head for Graduate Affairs*. Associate Professor. Embedded systems, self-managing systems, reliable and fault-tolerant computing, distributed systems, computer architecture, and testing and verification of digital systems.

Bruce Katz, PhD *(University of Illinois)*. Adjunct Professor. Speech communication and computer science; artificial intelligence.

Youngmoo Kim, PhD *(MIT)*. Associate Professor. Audio and music signal processing, voice analysis and synthesis, music information retrieval, machine learning.

Timothy P. Kurzweg, PhD *(University of Pittsburgh)*. Associate Professor. Micro-optical systems; optical spectroscopy; programmable imaging with MEMS; bio-sensors; diffuse optical communication; MEMS fabrication; diffractive optics; optical automation; optical modeling and simulation; magnetic particle locomotion; meta-materials; reconfigurable antennas

Karen Miu, PhD *(Cornell University)*. Professor. Power systems; distribution networks; distribution automation; optimization; system analysis.

Bahram Nabet, PhD *(University of Washington) Associate Dean for Special Projects, College of Engineering; Electrical and Computer Engineering*. Professor. Optoelectronics; fabrication and modeling; fiber optic devices; nanoelectronics; nanowires.

Prawat Nagvajara, Ph.D. *(Boston University)*. Associate Professor. System on a chip; embedded systems; power grid computation; testing of computer hardware; fault-tolerant computing; VLSI systems; error control coding.

Dagmar Niebur, PhD *(Swiss Federal Institute of Technology)*. Associate Professor. Intelligent systems; dynamical systems; power system monitoring and control.

Chika Nwankpa, PhD *(Illinois Institute of Technology) ECE Department Head*. Professor. Power system dynamics; power electronic switching systems; optically controlled high power switches.

Christopher Peters, PhD *(University of Michigan)*. Teaching Professor. Nuclear reactor design; ionizing radiation detection; nuclear forensics; power plant reliability and risk analysis; naval/marine power and propulsion; directed energy/high power microwaves; nonstationary signal processing; radar; electronic survivability/susceptibility to harsh environments; electronic warfare

Karkal S. Prahbu, PhD *(Harvard University)*. Auxiliary Professor. Computer and software engineering; advanced microprocessors and distributed operating systems.

Gail L. Rosen, PhD *(Georgia Institute of Technology)*. Associate Professor. Signal processing, signal processing for biological analysis and modeling, bio-inspired designs, source localization and tracking.

Ionnis Savidis, PhD *(University of Rochester)*. Assistant Professor. Analysis, modeling, and design methodologies for high performance digital and mixed-signal integrated circuits; Emerging integrated circuit technologies; Electrical and thermal modeling and characterization, signal and power integrity, and power and clock delivery for 3-D IC technologies

Kevin J. Scoles, PhD *(Dartmouth College)*. Associate Professor. Microelectronics; electric vehicles; solar energy; biomedical electronics.

Harish Sethu, PhD *(Lehigh University)*. Associate Professor. Protocols, architectures and algorithms in computer networks; computer security; mobile ad hoc networks; large-scale complex adaptive networks and systems.

James Shackleford, PhD *(Drexel University)*. Assistant Professor. Medical image processing, high performance computing, embedded systems, computer vision, machine learning

P. Mohana Shankar, PhD *(Indian Institute of Technology) Allen Rothwarf Professor of Electrical and Computer Engineering*. Professor. Wireless communications; biomedical ultrasonics; fiberoptic bio-sensors.

Matthew Stamm, PhD *(University of Maryland, College Park)*. Assistant Professor. Information Security; multimedia forensics and anti-forensics; information verification; adversarial dynamics; signal processing

Jaudelice Cavalcante de Oliveira, PhD *(Georgia Institute of Technology)*. Associate Professor. Software-defined networking; social and economic networks; network security; design and analysis of protocols, algorithms and architectures in computer networks, particularly solutions for the Internet of Things

Computer Engineering PhD

Major: Computer Engineering
Degree Awarded: Doctor of Philosophy (PhD)
Calendar Type: Quarter
Minimum Required Credits: 90.0
Co-op Option: None
Classification of Instructional Programs (CIP) code: 14.0901
Standard Occupational Classification (SOC) code: 15-1132; 15-1133; 15-1143; 17-2031

About the Program

The computer engineering curriculum is designed to: (1) address the needs of students with a variety of different backgrounds; (2) ensure that graduates will have adequate knowledge and skills in at least one area of specialization; (3) meet the immediate needs of working students as well as to adequately prepare full-time students for a real-world technological environment; and (4) equip students with tools to grasp and develop new technologies and trends.

Additional Information

For more information, visit the Department of Electrical and Computer Engineering (https://drexel.edu/engineering/academics/departments/electrical-computer-engineering/) website.

Admission Requirements

Applicants should have an undergraduate degree equivalent to a US bachelor's degree in computer engineering, computer science, or electrical engineering. Students holding degrees in other engineering and science disciplines with appropriate coursework or training will also be considered.

Appropriate coursework includes experience with all of the following: Software (advanced programming and operating systems); Computer Architecture (digital systems design, computer organization and architecture); Algorithms and Data Structures; Computer Networks. Students must have a minimum 3.0 GPA (on a 4.0 scale) for the last two years of undergraduate studies, as well as for any subsequent graduate-level work.

The GRE General Test is required of applicants to the full-time PhD program. Students whose native language is not English and who do not hold a degree from a US institution must take the Test of English as a Foreign Language (TOEFL).

Additional Information

For more information on how to apply, visit Drexel's Admissions page for Computer Engineering (http://www.drexel.edu/grad/programs/coe/computer-engineering/).

Degree Requirements

General Requirements

The following general requirements must be satisfied in order to complete the PhD in Electrical Engineering:

- 90.0 credit hours total
- candidacy examination
- research proposal
- dissertation defense

Students entering with a master's degree in electrical or computer engineering or a related field will be considered a post-masters PhD student and will only be required to complete a total of 45.0 credit hours, in accordance with University policy.

Curriculum

Appropriate coursework is chosen in consultation with the student's research advisor. A plan of study must be developed by the student to encompass the total number of required credit hours. Both the departmental graduate advisor and the student's research advisor must approve this plan.

Candidacy Examination

The candidacy examination explores the depth of understanding of the student in his/her specialty area. The student is expected to be familiar with, and be able to use, the contemporary tools and techniques of the field and to demonstrate familiarity with the principal results and key findings.

The student, in consultation with his/her research advisor, will declare a principal technical area for the examination. The examination includes the following three parts:

- A self-study of three papers from the archival literature in the student's stated technical area, chosen by the committee in consultation with the student.
- A written report (15 pages or less) on the papers, describing their objectives, key questions and hypotheses, methodology, main results and conclusions. Moreover, the student must show in an appendix independent work he/she has done on at least one of the papers – such as providing a full derivation of a result or showing meaningful examples, simulations or applications.
- An oral examination which takes the following format:
  - A short description of the student's principal area of interest (5 minutes, by student).
  - A review of the self-study papers and report appendix (25-30 minutes, by students).
  - Questions and answers on the report, the appendix and directly related background (40-100 minutes, student and committee).

In most cases, the work produced during the candidacy examination will be a principal reference for the student's PhD dissertation; however, this is not a requirement.

Research Proposal

Each student, after having attained the status of PhD Candidate, must present a research proposal to a committee of faculty and industry members, chosen with his/her research advisor, who are knowledgeable in the specific area of research. This proposal should outline the specific intended subject of study; i.e., it should present a problem statement, pertinent background, methods of study to be employed, expected difficulties and uncertainties and the anticipated form, substance and significance of the results.

The purpose of this presentation is to verify suitability of the dissertation topic and the candidate's approach, and to obtain the advice and

guidance of oversight of mature, experienced investigators. It is not to be construed as an examination, though approval by the committee is required before extensive work is undertaken. The thesis proposal presentation must be open to all; announcements regarding the proposal presentation must be made in advance.

The thesis advisory committee will have the sole responsibility of making any recommendations regarding the research proposal. It is strongly recommended that the proposal presentation be given as soon as possible after the successful completion of the candidacy examination.

Dissertation Defense

Dissertation Defense procedures are described on the Office of Graduate Studies (http://drexel.edu/graduatecollege/academics/thesis-and-dissertation/) webpage. The student must be a PhD candidate for at least one year before he/she can defend his/her doctoral thesis.

Facilities

Drexel University and the Electrical and Computer Engineering Department are nationally recognized for a strong history of developing innovative research. Research programs in the ECE Department prepare students for careers in research and development, and aim to endow graduates with the ability to identify, analyze, and address new technical and scientific challenges. The ECE Department is well equipped with state-of-the-art facilities in each of the following ECE Research laboratories:

Research Laboratories at the ECE Department

Adaptive Signal Processing and Information Theory Research Group

The Adaptive Signal Processing and Information Theory Research Group conducts research in the area of signal processing and information theory. Our main interests are belief/expectation propagation, turbo decoding and composite adaptive system theory. We are currently doing projects on the following topics:

- Delay mitigating codes for network coded systems
- Distributed estimation in sensor networks via expectation propagation
- Turbo speaker identification
- Performance and convergence of expectation propagation
- Investigating bounds for SINR performance of autocorrelation based channel shorteners

Applied Networking Research Lab

Applied Networking Research Lab (ANRL) projects focus on modeling and simulation as well as experimentation in wired, wireless and sensor networks. ANRL is the home of MuTANT, a Multi-Protocol Label Switched Traffic Engineering and Analysis Testbed composed of 10 high-end Cisco routers and several PC-routers, also used to study other protocols in data networks as well as automated network configuration and management. The lab also houses a sensor network testbed.

Bioimage Laboratory

Uses computer gaming hardware for enhanced and affordable 3-D visualization, along with techniques from information theory and machine learning to combine the exquisite capabilities of the human visual system with computational sensing techniques for analyzing vast quantities of image sequence data.

Data Fusion Laboratory

The Data Fusion Laboratory investigates problems in multisensory detection and estimation, with applications in robotics, digital communications, radar, and target tracking. Among the projects in progress: computationally efficient parallel distributed detection architectures, data fusion for robot navigation, modulation recognition and RF scene analysis in time-varying environments, pattern recognition in biological data sequences and large arrays, and hardware realizations of data fusion architectures for target detection and target tracking.

Drexel Network Modeling Laboratory

The Drexel Network Modeling Laboratory investigates problems in the mathematical modeling of communication networks, with specific focus on wireless ad hoc networks, wireless sensor networks, and supporting guaranteed delivery service models on best effort and multipath routed networks. Typical methodologies employed in our research include mathematical modeling, computer simulation, and performance optimization, often with the end goal of obtaining meaningful insights into network design principles and fundamental performance tradeoffs.

Drexel University Nuclear Engineering Education Laboratory

The field of nuclear engineering encompasses a wide spectrum of occupations, including nuclear reactor design, medical imaging, homeland security, and oil exploration.The Drexel University Nuclear Engineering Education Laboratory (DUNEEL) provides fundamental hands on understanding for power plant design and radiation detection and analysis.Software based study for power plant design, as well as physical laboratory equipment for radiation detection, strengthen the underlying concepts used in nuclear engineering such that the student will comprehend and appreciate the basic concepts and terminology used in various nuclear engineering professions. Additionally, students use the laboratory to develop methods for delivering remote, live time radiation detection and analysis. The goal of DUNEEL is to prepare students for potential employment in the nuclear engineering arena.

Drexel VLSI Laboratory

The Drexel VLSI Laboratory investigates problems in the design, analysis, optimization and manufacturing of high performance (low power, high throughput) integrated circuits in contemporary CMOS and emerging technologies. Suited with industrial design tools for integrated circuits, simulation tools and measurement beds, the VLSI group is involved with digital and mixed-signal circuit design to verify the functionality of the discovered novel circuit and physical design principles. The Drexel VLSI laboratory develops design methodologies and automation tools in these areas, particularly in novel clocking techniques, featuring resonant clocking, and interconnects, featuring wireless interconnects.

Drexel Wireless Systems Laboratory

The Drexel Wireless Systems Laboratory (DWSL) contains an extensive suite of equipment for constructing, debugging, and testing prototype wireless communications systems. Major equipment within DWSL includes:

- software defined radio network testbeds for rapidly prototyping new communications and network systems,
- electromagnetic anechoic chamber and reverberation chambers for testing new wireless technologies,
- experimental cell tower for field testing new wireless technologies.

The lab is also equipped with network analyzers, high speed signal generators, oscilloscopes, and spectrum analyzers as well as several Zigbee development platforms for rapidly prototyping sensor networks. The lab offers laboratory coursework in wireless network security, collaborative intelligent radio networks, and fundamental analog and digital communication systems.

Ecological and Evolutionary Signal-processing and Informatics Laboratory

The Ecological and Evolutionary Signal-processing and Informatics Laboratory (EESI) seeks to solve problems in high-throughput genomics and engineer better solutions for biochemical applications. The lab's primary thrust is to enhance the use of high-throughput DNA sequencing technologies with pattern recognition and signal processing techniques. Applications include assessing the organism content of an environmental sample, recognizing/classifying potential and functional genes, inferring environmental factors and inter-species relationships, and inferring microbial evolutionary relationships from short-read DNA/RNA fragments. The lab also investigates higher-level biological systems such as modeling and controlling chemotaxis, the movement of cells.

Electric Power Engineering Center

This newly established facility makes possible state-of-the-art research in a wide variety of areas, ranging from detailed theoretical model study to experimental investigation in its high voltage laboratories. The mission is to advance and apply scientific and engineering knowledge associated with the generation, transmission, distribution, use, and conservation of electric power. In pursuing these goals, this center works with electric utilities, state and federal agencies, private industries, nonprofit organizations and other universities on a wide spectrum of projects. Research efforts, both theoretical and experimental, focus on the solution of those problems currently faced by the electric power industry. Advanced concepts for electric power generation are also under investigation to ensure that electric power needs will be met at the present and in the future.

Electronic Design Automation Facility

Industrial-grade electronic design automation software suite and intergrated design environment for digital, analog and mixed-signal systems development. Field Programmable Gate Array (FPGA) development hardware. Most up-to-date FPGA/embedded system development hardware kits. Printed circuit board production facility. Also see Drexel VLSI Laboratory.

Microwave-Photonics Device Laboratories

The laboratory is equipped with test and measurement equipment for high-speed analog and digital electronics and fiber optic systems. The test equipment includes network analyzers from Agilent (100kHz- 1.3 GHz and 45 Mhz-40 GHz), and Anritsu (45 MHz-6 GHz); spectrum analyzers from Tektronix, HP, and Agilent with measurement capability of DC to 40 GHz and up to 90 GHz using external mixers; signal generators and communication channel modulators from HP, Rhode-Schwartz, Systron Donner, and Agilent; microwave power meter and sensor heads, assortment of passive and active microwave components up to 40 GHz ; data pattern generator and BER tester up to 3Gb/s; optical spectrum analyzer from Anritsu and power meters from HP; single and multimode fiber optic based optical transmitter and receiver boards covering ITU channels at data rates up to 10Gb/s; passive optical components such as isolator, filter, couplers, optical connectors and fusion splicer; LPKF milling machine for fabrication of printed circuit boards; wire-bonding and Cascade probe stations; Intercontinental test fixtures for testing of MMIC circuits and solid-state transistors; state-of-the-art microwave and electromagnetic CAD packages such as Agilent ADS, ANSYS HFSS, and COMSOL multi-physics module.

Multimedia & Information Security Lab [MISL]

The Multimedia and Information Security Lab (MISL) develops algorithms to detect fake images and videos, along with algorithms to determine the true source an image or video. This research is particularly important because widely available editing software enables multimedia forgers to create perceptually realistic forgeries. Our goal at MISL, is to conduct research that provides information verification and security in scenarios when an information source cannot be trusted.

The research conducted at MISL is part of a new area, known as multimedia forensics, which lies at the intersection of many areas in machine learning and artificial intelligence, signal processing, image and video processing, game theory, etc. Our algorithms work by identifying or learning visually imperceptible traces left in images and videos by processing operations. We use these traces to detect editing or forgery as well as to link an image or video back to the camera that captured it. We also perform research on anti-forensic operations designed to fool forensic techniques. By studying anti-forensics, researchers can identify and address weaknesses in existing forensic techniques as well as develop techniques capable of identifying the use of anti-forensics.

Music and Entertainment Technology Laboratory

The Music and Entertainment Technology Laboratory (MET-lab) is devoted to research in digital media technologies that will shape the future of entertainment, especially in the areas of sound and music. We employ digital signal processing and machine learning to pursue novel applications in music information retrieval, music production and processing technology, and new music interfaces. The MET-lab is also heavily involved in outreach programs for K-12 students and hosts the Summer Music Technology program, a one-week learning experience for high school students. Lab facilities include a sound isolation booth for audio and music recording, a digital audio workstation running ProTools, two large multi-touch display interfaces of our own design, and a small computing cluster for distributed processing.

NanoPhotonics+ Lab

Our research is primarily in the area of nanophotonics with a focus on the nanoscale interaction of light with matter. Interests include: liquid crystal/polymer composites for gratings, lenses and HOEs; liquid crystal interactions with surfaces and in confined nanospaces; alternative energy generation through novel photon interactions; ink-jet printed conducting materials for RF and photonic applications; and the creation and development of smart textiles technologies including soft interconnects, sensors, and wireless implementations.

Opto-Electro-Mechanical Laboratory

This lab concentrates on the system integration on optics, electronics, and mechanical components and systems, for applications in imaging, communication, and biomedical research. Research areas include: Programmable Imaging with Optical Micro-electrical-mechanical systems (MEMS), in which microscopic mirrors are used to image light into a single photodetector; Pre-Cancerous Detection using White Light Spectroscopy, which performs a cellular size analysis of nuclei in tissue; Free-space Optical Communication using Space Time Coding, which consists of diffused light for computer-to-computer communications, and also tiny

lasers and detectors for chip-to-chip communication; Magnetic Particle Locomotion, which showed that particles could swim in a uniform field; and Transparent Antennas using Polymer, which enables antennas to be printed through an ink-jet printer.

Plasma and Magnetics Laboratory

Research is focused on applications of electrical and magnetic technologies to biology and medicine. This includes the subjects of non-thermal atmospheric pressure plasma for medicine, magnetic manipulation of particles for drug delivery and bio-separation, development of miniature NMR sensors for cellular imaging and carbon nanotube cellular probes.

Power Electronics Research Laboratory

The Power Electronics Research Laboratory (PERL) is involved in circuit and design simulation, device modeling and simulation, and experimental testing and fabrication of power electronic circuits. The research and development activities include electrical terminations, power quality, solar photovoltaic systems, GTO modeling, protection and relay coordination, and solid-state circuit breakers. The analysis tools include EMPT, SPICE, and others, which have been modified to incorporate models of such controllable solid-state switches as SCRs, GTOs, and MOSFETs. These programs have a wide variety and range of modeling capabilities used to model electromagnetics and electromechanical transients ranging from microseconds to seconds in duration. The PERL is a fully equipped laboratory with 42 kVA AC and 70 kVA DC power sources and data acquisition systems, which have the ability to display and store data for detailed analysis. Some of the equipment available is a distribution and HV transformer and three phase rectifiers for power sources and digital oscilloscopes for data measuring and experimental analysis. Some of the recent studies performed by the PERL include static VAR compensators, power quality of motor controllers, solid-state circuit breakers, and power device modeling which have been supported by PECO, GE, Gould, and EPRI.

Eli Fromm, PhD *(Jefferson Medical College) LeRoy A. Brothers University Professor / Director for Center of Educational Research*. Professor. Engineering education; academic research policy; bioinstrumentation; physiologic systems.

Edwin L. Gerber, PhD *(University of Pennsylvania)*. Professor. Computerized instruments and measurements; undergraduate engineering education.

Allon Guez, PhD *(University of Florida)*. Professor. Intelligent control systems; robotics, biomedical, automation and manufacturing; business systems engineering.

Peter R. Herczfeld, PhD *(University of Minnesota) Lester A. Kraus Professor/Director, Center for Microwave/Lightwave Engineering*. Professor. Lightwave technology; microwaves; millimeter waves; fiberoptic and integrated optic devices.

Leonid Hrebien, PhD *(Drexel University)*. Professor. Tissue excitability; acceleration effects on physiology; bioinformatics.

Nagarajan Kandasamy, PhD *(University of Michigan) Associate Department Head for Graduate Affairs*. Associate Professor. Embedded systems, self-managing systems, reliable and fault-tolerant computing, distributed systems, computer architecture, and testing and verification of digital systems.

Bruce Katz, PhD *(University of Illinois)*. Adjunct Professor. Speech communication and computer science; artificial intelligence.

Youngmoo Kim, PhD *(MIT)*. Associate Professor. Audio and music signal processing, voice analysis and synthesis, music information retrieval, machine learning.

Timothy P. Kurzweg, PhD *(University of Pittsburgh)*. Associate Professor. Micro-optical systems; optical spectroscopy; programmable imaging with MEMS; bio-sensors; diffuse optical communication; MEMS fabrication; diffractive optics; optical automation; optical modeling and simulation; magnetic particle locomotion; meta-materials; reconfigurable antennas

Karen Miu, PhD *(Cornell University)*. Professor. Power systems; distribution networks; distribution automation; optimization; system analysis.

Bahram Nabet, PhD *(University of Washington) Associate Dean for Special Projects, College of Engineering; Electrical and Computer*

Engineering. Professor. Optoelectronics; fabrication and modeling; fiber optic devices; nanoelectronics; nanowires.

Prawat Nagvajara, Ph.D. *(Boston University)*. Associate Professor. System on a chip; embedded systems; power grid computation; testing of computer hardware; fault-tolerant computing; VLSI systems; error control coding.

Dagmar Niebur, PhD *(Swiss Federal Institute of Technology)*. Associate Professor. Intelligent systems; dynamical systems; power system monitoring and control.

Chika Nwankpa, PhD *(Illinois Institute of Technology) ECE Department Head*. Professor. Power system dynamics; power electronic switching systems; optically controlled high power switches.

Christopher Peters, PhD *(University of Michigan)*. Teaching Professor. Nuclear reactor design; ionizing radiation detection; nuclear forensics; power plant reliability and risk analysis; naval/marine power and propulsion; directed energy/high power microwaves; nonstationary signal processing; radar; electronic survivability/susceptibility to harsh environments; electronic warfare

Karkal S. Prahbu, PhD *(Harvard University)*. Auxiliary Professor. Computer and software engineering; advanced microprocessors and distributed operating systems.

Gail L. Rosen, PhD *(Georgia Institute of Technology)*. Associate Professor. Signal processing, signal processing for biological analysis and modeling, bio-inspired designs, source localization and tracking.

Ionnis Savidis, PhD *(University of Rochester)*. Assistant Professor. Analysis, modeling, and design methodologies for high performance digital and mixed-signal integrated circuits; Emerging integrated circuit technologies; Electrical and thermal modeling and characterization, signal and power integrity, and power and clock delivery for 3-D IC technologies

Kevin J. Scoles, PhD *(Dartmouth College)*. Associate Professor. Microelectronics; electric vehicles; solar energy; biomedical electronics.

Harish Sethu, PhD *(Lehigh University)*. Associate Professor. Protocols, architectures and algorithms in computer networks; computer security; mobile ad hoc networks; large-scale complex adaptive networks and systems.

James Shackleford, PhD *(Drexel University)*. Assistant Professor. Medical image processing, high performance computing, embedded systems, computer vision, machine learning

P. Mohana Shankar, PhD *(Indian Institute of Technology) Allen Rothwarf Professor of Electrical and Computer Engineering*. Professor. Wireless communications; biomedical ultrasonics; fiberoptic bio-sensors.

Matthew Stamm, PhD *(University of Maryland, College Park)*. Assistant Professor. Information Security; multimedia forensics and anti-forensics; information verification; adversarial dynamics; signal processing

Jaudelice Cavalcante de Oliveira, PhD *(Georgia Institute of Technology)*. Associate Professor. Software-defined networking; social and economic networks; network security; design and analysis of protocols, algorithms and architectures in computer networks, particularly solutions for the Internet of Things

Construction Management MS

Major: Construction Management
Degree Awarded: Master of Science (MS)
Calendar Type: Quarter
Minimum Required Credits: 45.0
Co-op Option: None
Classification of Instructional Programs (CIP) code: 52.2001
Standard Occupational Classification (SOC) code: 11-9021

About the Program

The Master of Science in Construction Management program gives professionals the opportunity to develop the multidisciplinary skills required of effective construction managers. The program focuses on training professionals to meet the challenge of increasing owner demands, tighter project delivery times and increasing regulation. The program provides the leadership skills professionals need to navigate the many daily challenges construction organizations face in successfully managing construction operations. Students are admitted to start in the Fall and the Spring terms.

Program Goals

The program is designed to increase the students' breadth and depth of knowledge in the principles and practices of construction management. The program serves as an excellent platform to develop senior management for the nation's construction industry.

Focus Areas

Focused study through elective courses in the program allow for deeper knowledge in the following areas:

Construction Project Management
Successfully manage complex construction projects through skills and knowledge gained from courses covering the hard skills of project management, such as estimating and budgeting, time management and planning. Other topics include managerial and legal aspects of construction contract administration, international construction practices, strategic planning, quality management and productivity analysis.

Real Estate
Explore the creation, maintenance, and built environments for living, working and entertainment purposes. Relevant issues include project finance, real estate as investments, design and construction, operations, development law, environmental remediation, public policy, market analysis, and architecture.

Sustainability and Green Construction
Become an expert in sustainable development through integrating the decision-making process across the project team, with an eye to the greatest long-term benefits. Learn about the construction process within the Leadership in Energy and Environmental Design (LEED) green building rating system, which represents a significant portion of the effort required to achieve these high performance building programs.

Additional Information

For more information, view the College of Engineering's Construction Management (https://drexel.edu/engineering/academics/departments/construction-engineering-project-management-systems-engineering/academic-programs/undergraduate/construction-management/) webpage

or contact us here (https://drexel.edu/engineering/admissions/graduate/contact-us/).

Admissions Requirements

Admission to the program requires:

- A bachelor's degree in construction management or engineering, or a baccalaureate business or non-technical degree.
- A completed application
- Official transcripts from all universities or colleges and other post-secondary educational institutions (including trade schools) attended. Potential students must supply transcripts regardless of the number of credits earned or the type of school attended. If a potential student does not list all post-secondary institutions on his or her application, and these are listed on transcripts received from other institutions, processing of the application will be delayed until the remaining transcripts have been submitted.
- GPA of 3.0 or higher
- Two letters of recommendation (professional or academic)
- Up-to-date resume
- 500 word essay on why the applicant wishes to pursue graduate studies in this program
- International Students must submit a TOEFL score indicating a minimum of 600 (paper exam) or 250 (CBT exam). For more information regarding international applicant requirements, view the International Students Admissions Information (http://drexel.edu/grad/resources/international/) page.

Additional Information

Visit the Graduate Admissions (http://www.drexel.edu/grad/programs/coe/construction-management/) website for more information about requirements and deadlines, as well as instructions for applying online.

Degree Requirements

The Master of Science in Construction Management curriculum includes a core of six required courses (18.0 credits), a concentration (21.0 credits), and 6.0 credits of culminating experience. The culminating experience includes a capstone project in construction management.

Core Foundation Courses		
CMGT 501	Leadership in Construction	3.0
CMGT 505	Construction Accounting and Financial Management	3.0
CMGT 510	Construction Control Techniques	3.0
CMGT 512	Cost Estimating and Bidding Strategies	3.0
CMGT 515	Risk Management in Construction	3.0
CMGT 528	Construction Contract Administration	3.0
Electives		**21.0**
Students may select 7 elective courses from the following areas:		
CMGT 525	Applied Construction Project Management	
CMGT 530	Equipment Applications and Economy	
CMGT 532	International Construction Practices	
CMGT 535	Community Impact Analysis	
CMGT 538	Strategic Management in Construction	
CMGT 540	Schedule Impact Analysis	
CMGT 545	Sustainable Principles & Practices	
CMGT 546	Sustainable Technologies	
CMGT 547	LEED Concepts	
CMGT 548	Quality Management and Construction Performance	
CMGT 550	Productivity Analysis and Improvement	
CMGT 558	Community Sustainability	
REAL 568	Real Estate Development	
REAL 571	Advanced Real Estate Investment & Analysis	
REAL 572	Advanced Market Research & Analysis	
REAL 573	Sales & Marketing of Real Estate	
REAL 574	Real Estate Economics in Urban Markets	
REAL 575	Real Estate Finance	
REAL 576	Real Estate Valuation & Analysis	
REAL 577	Legal Issues in Real Estate Development	
Culminating Experience		**6.0**
CMGT 696	Capstone Project in Construction Management I	
CMGT 697	Capstone Project in Construction Management II	
Total Credits		**45.0**

Sample Plan of Study

First Year

Fall	Credits	Winter	Credits	Spring	Credits	Summer	Credits
CMGT 501	3.0	CMGT 528	3.0	CMGT 510	3.0	CMGT 515	3.0
CMGT 505	3.0	CMGT 538	3.0	CMGT 512	3.0	CMGT 540	3.0
	6		**6**		**6**		**6**

Second Year

Fall	Credits	Winter	Credits	Spring	Credits	Summer	Credits
CMGT 525	3.0	CMGT 548	3.0	CMGT 530	3.0	CMGT 697	3.0
CMGT 532	3.0	CMGT 550	3.0	CMGT 696	3.0		
	6		**6**		**6**		**3**

Total Credits 45

Note: Second Year Summer is less than the 4.5-credit minimum required (considered half-time status) of graduate programs to be considered financial aid eligible. As a result, aid will not be disbursed to students this term.

Program Level Outcomes

Graduates of the Master of Science in Construction Management program will:

- exhibit strong technical and managerial skills
- apply scientific methodologies to problem solving
- think critically
- exercise creativity and inject innovation into the process
- operate at the highest level of ethical practice
- employ principles of transformational leadership

Construction Management Faculty

Robert Beard, PhD *(Georgia Institute of Technology)*. Associate Clinical Professor. Project and Program Management; Entrepreneurship in design and construction; Integrated project delivery systems; History of engineering and construction; Sustainable design and construction.

Douglas Carney, MBA, AIA *(Eastern University)*. Clinical Professor. Architecture; Contract management; Master planning; Site analysis; Feasibility and zoning issues; Space needs and program development; Code analysis and compliance studies; project scheduling.

Charles Cook, PhD *(New York University)*. Assistant Clinical Professor. Construction management; project management; leadership and teambuilding; oral and written communication.

Christine M. Fiori, PhD *(Drexel University) Program Director*. Clinical Professor. Improving the delivery of safety education in construction

curriculum; Ancient construction techniques; Design and construction in developing countries; Leadership in construction; Workforce development

Kenneth S. Sands, PhD *(Virginia Tech)*. Associate Clinical Professor. Workforce development and lifelong learning; ethics and construction education; transformative safety leadership for construction education; sustainable facilities and infrastructure.

Richard Sievert, PhD *(Northwestern University)*. Associate Clinical Professor. Project management and construction management; value engineering; cost reduction and waste minimization; facilities planning and management; marketing and selling professional services; quality management, engineering and construction business administration.

Cybersecurity MS

Major: Cybersecurity
Degree Awarded: Master of Science (MS)
Calendar Type: Quarter
Minimum Required Credits: 45.0
Co-op Option: Available for full-time, on-campus master's-level students
Classification of Instructional Programs (CIP) code: 11.1003
Standard Occupational Classification (SOC) code: 15-1122

About the Program

Drexel University's MS in Cybersecurity program, developed in collaboration with the National Security Agency (NSA), addresses the growing cybersecurity concerns in our increasingly digital world. This interdisciplinary program, administered by the Electrical & Computer Engineering Department in the College of Engineering, includes courses from the College of Computing & Informatics to provide students with comprehensive academic and practical training.

The program is designed for students with backgrounds in computer engineering, computer science, electrical engineering, information technology/systems, and related technical fields. The degree requires a minimum of 45.0 approved credits. The curriculum is customizable, with students developing their plan of study in consultation with their academic advisor. Full-time on-campus students have the opportunity to participate in the Graduate Co-op Program, which combines classroom learning with a six-month, full-time work experience, providing valuable industry exposure.

The curriculum covers a wide range of topics, including computer networking, probability concepts, algorithm analysis techniques, dependable software design, reverse software engineering, intrusion detection, ethics, privacy, confidentiality, authenticity, and social networking. Students gain deep technical knowledge and specialized training, enabling them to understand, adapt, and develop new techniques to confront emerging threats in cybersecurity.

Graduates of this program are prepared to solve complex issues in the rapidly evolving digital security space. They gain a comprehensive understanding of the forces that threaten digital spaces, industry governance, and a global perspective. Drexel emphasizes entrepreneurial, teambuilding, and managerial abilities, which are crucial for advancing careers in industry and research or preparing for entry into a PhD program in computer engineering or related fields.

By earning a master's in cybersecurity, students become empowered to apply deepened technical skillsets required for careers in information technology security, cybersecurity, hardware security, and related areas. This program equips graduates to be competitive in today's rapidly changing technical landscape and to tackle the evolving challenges of the digital age.

Students also have the option to engage in research under the supervision of a faculty member. A total of 9.0 credits of research-oriented coursework may be counted towards the minimum credit hour requirement of the degree program. These credits are considered general electives.

The MS program is designed so that a student may complete the degree requirements in less than 2 years of full-time study or 2-3 years of part-time study.

Full-time on-campus students who start in a fall term are eligible to take part in the Graduate Co-op Program, which combines classroom coursework with a 6-month, full-time work experience. For more information, visit the Steinbright Career Development Center's website or visit the Drexel Engineering Graduate Co-op webpage (https://drexel.edu/engineering/academics/experiential-learning-co-op/graduate-co-ops/).

Additional Information

For more information about this program, please visit the ECE Department's Cybersecurity degree page (https://drexel.edu/engineering/academics/graduate-programs/masters/cybersecurity/).

Admission Requirements

Applicants must satisfy general requirements for graduate admission, including a minimum 3.00 GPA (on a 4.00 scale) for the last two years of undergraduate study, as well as for any subsequent graduate work. It is preferred that applicants hold a bachelor's degree in an engineering discipline, computer science, or information technology. Degrees must be earned from an accredited college or university. An undergraduate degree earned abroad must be deemed equivalent to a US bachelor's degree.

The GRE general test is optional for all applicants. TOEFL, IELTS, PTE, or Duolingo is required if the language of instruction of your previous degree was not English.

For additional information on how to apply and deadlines, visit the College of Engineering's Admission Guidelines (https://drexel.edu/engineering/admissions/graduate/admission-guidelines/) or Drexel's admissions page for Cybersecurity (https://drexel.edu/academics/grad-professional-programs/engineering/cybersecurity/).

Degree Requirements

The Master of Science in Cybersecurity program encompasses a minimum of 45.0 approved credit hours, chosen in accordance with the requirements listed below. A plan of study should be arranged with the departmental graduate advisors, and in consultation with the student's research advisor, if applicable.

The required core courses provide students with a theoretical foundation in the field of cybersecurity and a framework to guide the application of knowledge gained in technical electives to the practice of cybersecurity.

Core Courses		
INFO 517	Principles of Cybersecurity	3.0
INFO 725	Information Policy and Ethics	3.0
SE 578	Security Engineering *	3.0
or INFO 712	Information Assurance	
Cybersecurity Track-Specific Technical Electives		**27.0**

Choose from lists below depending on track		
Cybersecurity Non-Track Technical Electives **		**9.0**
Optional Co-op Experience ***		**0-1**
COOP 500	Career Management and Professional Development for Master's Degree Students	
Total Credits		**45.0-46.0**

*****

Students in the Information Systems Track must take INFO 712.
Students in the Computer Science Track and Electrical & Computer Engineering must take SE 578.

******

If enrolled in the Computer Science Track, choose 3 courses (9.0 credits) from either Electrical & Computer Engineering Track or Information Systems Track Technical Electives list.
If enrolled in the Information Systems Track, choose 3 courses (9.0 credits) from either the Computer Science or Electrical & Computer Engineering Tracks.
If enrolled in the Electrical & Computer Engineering Track, choose 3 courses (9.0 credits) from either the Computer Science or Information Systems Tracks,

****

Co-op is an option for this degree for full-time on-campus students.
To prepare for the 6-month co-op experience, students will complete: COOP 500. The total credits required for this degree with the co-op experience is 46.0
Students not participating in the co-op experience will need 45.0 credits to graduate.

Computer Science Track Electives

CS 500	Fundamentals of Databases	3.0
CS 501	Introduction to Programming	3.0
CS 502	Data Structures and Algorithms	3.0
CS 503	Systems Basics	3.0
CS 504	Introduction to Software Design	3.0

*****

INFO 712 may not be used toward both track specific technical elective and core requirement.

*****

Cybersecurity technical electives are used to build a deep understanding of one or more areas of technical expertise within the field of cybersecurity. All students are required to take a minimum of 18.0 credits of cybersecurity technical electives from the graduate course offerings of the Department of Computer Science, the Department of Computing and Security Technology, and the Department of Electrical and Computer Engineering [ECE]. A list of pre-approved technical electives can be found on the ECE Department website.

******

General electives are the remaining courses needed to reach the minimum credit hour requirement for the degree program. General electives can be chosen from among the graduate course offerings of the College of Computing & Informatics; the Department of Computer Science; the Department of Computing and Security Technology; the Department of Electrical and Computer Engineering, and the Department of Mathematics. In order to have courses outside of these departments and schools count towards degree completion, they must be approved by the departmental graduate advisors prior to registration for said courses.

Graduate Co-op/Career Opportunities

Graduate Co-Op

Full-time on-campus students who start in a fall term may choose to participate in the Graduate Co-op Program, working on curriculum related projects. Graduate Co-op enables graduate students to alternate class terms with a six-month period of hands-on experience, gaining access to employers in their chosen industries. Whether co-op takes students throughout the United States or abroad, they are expanding their professional networks, enhancing their resumes, and bringing that experience back to the classroom and their peers.

Further information on the Graduate Co-Op Program (https://drexel.edu/scdc/co-op/graduate/) is available at the Drexel Steinbright Career Development Center. (http://www.drexel.edu/scdc/)

Research

Students in the MS in Cybersecurity program have opportunities to perform research-oriented coursework for academic credit. Research-oriented coursework can be divided into three categories: research rotations, master's thesis, and independent research.

A total of 9.0 credits of research-oriented coursework may be counted towards the minimum credit hour requirement of the degree program. These credits are considered general electives.

Facilities

Drexel University and the Electrical and Computer Engineering Department are nationally recognized for a strong history of developing innovative research. Research programs in the ECE Department prepare students for careers in research and development, and aim to endow graduates with the ability to identify, analyze, and address new technical and scientific challenges. The ECE Department is well equipped with state-of-the-art facilities in each of the following ECE Research laboratories:

Research Laboratories at the ECE Department

Adaptive Signal Processing and Information Theory Research Group

The Adaptive Signal Processing and Information Theory Research Group (https://research.coe.drexel.edu/ece/aspitrg/home.html) conducts research in the area of signal processing and information theory. Our main interests are belief/expectation propagation, turbo decoding and composite adaptive system theory. We are currently doing projects on the following topics:
i) Delay mitigating codes for network coded systems,
ii) Distributed estimation in sensor networks via expectation propagation,
iii) Turbo speaker identification,
iv) Performance and convergence of expectation propagation,
v) Investigating bounds for SINR performance of autocorrelation based channel shorteners.

Applied Networking Research Lab

Applied Networking Research Lab (ANRL) projects focus on modeling and simulation as well as experimentation in wired, wireless and sensor networks. ANRL is the home of MuTANT, a Multi-Protocol Label Switched Traffic Engineering and Analysis Testbed composed of 10 high-end Cisco routers and several PC-routers, also used to study other protocols in data networks as well as automated network configuration and management. The lab also houses a sensor network testbed.

Bioimage Laboratory

Uses computer gaming hardware for enhanced and affordable 3-D visualization, along with techniques from information theory and machine learning to combine the exquisite capabilities of the human visual system with computational sensing techniques for analyzing vast quantities of image sequence data.

Data Fusion Laboratory

The Data Fusion Laboratory investigates problems in multisensory detection and estimation, with applications in robotics, digital communications, radar, and target tracking. Among the projects in progress: computationally efficient parallel distributed detection architectures, data fusion for robot navigation, modulation recognition and RF scene analysis in time-varying environments, pattern recognition in biological data sequences and large arrays, and hardware realizations of data fusion architectures for target detection and target tracking.

Drexel Network Modeling Laboratory

The Drexel Network Modeling Laboratory investigates problems in the mathematical modeling of communication networks, with specific focus on wireless ad hoc networks, wireless sensor networks, and supporting guaranteed delivery service models on best effort and multipath routed networks. Typical methodologies employed in our research include mathematical modeling, computer simulation, and performance optimization, often with the end goal of obtaining meaningful insights into network design principles and fundamental performance tradeoffs.

Drexel Power-Aware Computing Laboratory

The Power-Aware Computing Lab investigates methods to increase energy efficiency across the boundaries of circuits, architecture, and systems. Our recent accomplishments include the Sigil profiling tool, scalable modeling infrastructure for accelerator implementations, microarchitecture-aware VDD gating algorithms, an accelerator architecture for ultrasound imaging, evaluation of hardware reference counting, hardware and operating system support for power-agile computing, and memory systems for accelerator-based architectures.

Drexel University Nuclear Engineering Education Laboratory

The field of nuclear engineering encompasses a wide spectrum of occupations, including nuclear reactor design, medical imaging, homeland security, and oil exploration. The Drexel University Nuclear Engineering Education Laboratory (DUNEEL) provides fundamental hands on understanding for power plant design and radiation detection and analysis. Software based study for power plant design, as well as physical laboratory equipment for radiation detection, strengthen the underlying concepts used in nuclear engineering such that the student will comprehend and appreciate the basic concepts and terminology used in various nuclear engineering professions. Additionally, students use the laboratory to develop methods for delivering remote, live time radiation detection and analysis. The goal of DUNEEL is to prepare students for potential employment in the nuclear engineering arena.

Drexel VLSI Laboratory

The Drexel VLSI Laboratory investigates problems in the design, analysis, optimization and manufacturing of high performance (low power, high throughput) integrated circuits in contemporary CMOS and emerging technologies. Suited with industrial design tools for integrated circuits, simulation tools and measurement beds, the VLSI group is involved with digital and mixed-signal circuit design to verify the functionality of the discovered novel circuit and physical design principles. The Drexel VLSI laboratory develops design methodologies and automation tools in these areas, particularly in novel clocking techniques, featuring resonant clocking, and interconnects, featuring wireless interconnects.

Drexel Wireless Systems Laboratory

The Drexel Wireless Systems Laboratory (DWSL) contains an extensive suite of equipment for constructing, debugging, and testing prototype wireless communications systems. Major equipment within DWSL includes:

- software defined radio network testbeds for rapidly prototyping new communications and network systems,
- electromagnetic anechoic chamber and reverberation chambers for testing new wireless technologies,
- experimental cell tower for field testing new wireless technologies.

The lab is also equipped with network analyzers, high speed signal generators, oscilloscopes, and spectrum analyzers as well as several Zigbee development platforms for rapidly prototyping sensor networks. The lab offers laboratory coursework in wireless network security, collaborative intelligent radio networks, and fundamental analog and digital communication systems.

Ecological and Evolutionary Signal-processing and Informatics Laboratory

The Ecological and Evolutionary Signal-processing and Informatics Laboratory (EESI) seeks to solve problems in high-throughput genomics and engineer better solutions for biochemical applications. The lab's primary thrust is to enhance the use of high-throughput DNA sequencing technologies with pattern recognition and signal processing techniques. Applications include assessing the organism content of an environmental sample, recognizing/classifying potential and functional genes, inferring environmental factors and inter-species relationships, and inferring microbial evolutionary relationships from short-read DNA/RNA fragments. The lab also investigates higher-level biological systems such as modeling and controlling chemotaxis, the movement of cells.

Electric Power Engineering Center

This newly established facility makes possible state-of-the-art research in a wide variety of areas, ranging from detailed theoretical model study to experimental investigation in its high voltage laboratories. The mission is to advance and apply scientific and engineering knowledge associated with the generation, transmission, distribution, use, and conservation of electric power. In pursuing these goals, this center works with electric utilities, state and federal agencies, private industries, nonprofit organizations and other universities on a wide spectrum of projects. Research efforts, both theoretical and experimental, focus on the solution of those problems currently faced by the electric power industry. Advanced concepts for electric power generation are also under investigation to ensure that electric power needs will be met at the present and in the future.

Electronic Design Automation Facility

Industrial-grade electronic design automation software suite and intergrated design environment for digital, analog and mixed-signal systems development. Field Programmable Gate Array (FPGA) development hardware. Most up-to-date FPGA/embedded system development hardware kits. Printed circuit board production facility. Also see Drexel VLSI Laboratory.

Microwave-Photonics Device Laboratories

The laboratory is equipped with test and measurement equipment for high-speed analog and digital electronics and fiber optic systems. The test equipment includes network analyzers from Agilent (100kHz- 1.3 GHz and 45 Mhz-40 GHz), and Anritsu (45 MHz-6 GHz); spectrum analyzers

from Tektronix, HP, and Agilent with measurement capability of DC to 40 GHz and up to 90 GHz using external mixers; signal generators and communication channel modulators from HP, Rhode-Schwartz, Systron Donner, and Agilent; microwave power meter and sensor heads, assortment of passive and active microwave components up to 40 GHz ; data pattern generator and BER tester up to 3Gb/s; optical spectrum analyzer from Anritsu and power meters from HP; single and multimode fiber optic based optical transmitter and receiver boards covering ITU channels at data rates up to 10Gb/s; passive optical components such as isolator, filter, couplers, optical connectors and fusion splicer; LPKF milling machine for fabrication of printed circuit boards; wire-bonding and Cascade probe stations; Intercontinental test fixtures for testing of MMIC circuits and solid-state transistors; state-of-the-art microwave and electromagnetic CAD packages such as Agilent ADS, ANSYS HFSS, and COMSOL multi-physics module.

Multimedia & Information Security Laboratory

The Multimedia & Information Security Laboratory (MISL) conducts research that provides information verification and security in scenarios when an information source cannot be trusted.

The majority of MISL's research is in digital multimedia forensics. Digital multimedia forensics involves the developing mathematical techniques to identify multimedia forgeries such as falsified images and videos. This research is particularly important because widely available editing software enables multimedia forgers to create perceptually realistic forgeries. MISL performs research on anti-forensic operations designed to fool forensic techniques. By studying anti-forensics, researchers can identify and address weaknesses in existing forensic techniques as well as develop techniques capable of identifying the use of anti-forensics.

Music and Entertainment Technology Laboratory

The Music and Entertainment Technology Laboratory (MET-lab) is devoted to research in digital media technologies that will shape the future of entertainment, especially in the areas of sound and music. We employ digital signal processing and machine learning to pursue novel applications in music information retrieval, music production and processing technology, and new music interfaces. The MET-lab is also heavily involved in outreach programs for K-12 students and hosts the Summer Music Technology program, a one-week learning experience for high school students. Lab facilities include a sound isolation booth for audio and music recording, a digital audio workstation running ProTools, two large multi-touch display interfaces of our own design, and a small computing cluster for distributed processing.

NanoPhotonics+ Lab

Our research is primarily in the area of nanophotonics with a focus on the nanoscale interaction of light with matter. Interests include: liquid crystal/polymer composites for gratings, lenses and HOEs; liquid crystal interactions with surfaces and in confined nanospaces; alternative energy generation through novel photon interactions; ink-jet printed conducting materials for RF and photonic applications; and the creation and development of smart textiles technologies including soft interconnects, sensors, and wireless implementations.

Opto-Electro-Mechanical Laboratory

This lab concentrates on the system integration on optics, electronics, and mechanical components and systems, for applications in imaging, communication, and biomedical research. Research areas include: Programmable Imaging with Optical Micro-electrical-mechanical systems (MEMS), in which microscopic mirrors are used to image light into a single photodetector; Pre-Cancerous Detection using White Light Spectroscopy, which performs a cellular size analysis of nuclei in tissue; Free-space Optical Communication using Space Time Coding, which consists of diffused light for computer-to-computer communications, and also tiny lasers and detectors for chip-to-chip communication; Magnetic Particle Locomotion, which showed that particles could swim in a uniform field; and Transparent Antennas using Polymer, which enables antennas to be printed through an ink-jet printer.

Plasma and Magnetics Laboratory

Research is focused on applications of electrical and magnetic technologies to biology and medicine. This includes the subjects of non-thermal atmospheric pressure plasma for medicine, magnetic manipulation of particles for drug delivery and bio-separation, development of miniature NMR sensors for cellular imaging and carbon nanotube cellular probes.

Power Electronics Research Laboratory

The Power Electronics Research Laboratory (PERL) is involved in circuit and design simulation, device modeling and simulation, and experimental testing and fabrication of power electronic circuits. The research and development activities include electrical terminations, power quality, solar photovoltaic systems, GTO modeling, protection and relay coordination, and solid-state circuit breakers. The analysis tools include EMPT, SPICE, and others, which have been modified to incorporate models of such controllable solid-state switches as SCRs, GTOs, and MOSFETs. These programs have a wide variety and range of modeling capabilities used to model electromagnetics and electromechanical transients ranging from microseconds to seconds in duration. The PERL is a fully equipped laboratory with 42 kVA AC and 70 kVA DC power sources and data acquisition systems, which have the ability to display and store data for detailed analysis. Some of the equipment available is a distribution and HV transformer and three phase rectifiers for power sources and digital oscilloscopes for data measuring and experimental analysis. Some of the recent studies performed by the PERL include static VAR compensators, power quality of motor controllers, solid-state circuit breakers, and power device modeling which have been supported by PECO, GE, Gould, and EPRI.

Privacy, Security and Automation Lab

Drexel University's Privacy, Security, and Automation Laboratory (PSAL) researches on topics at the intersection between artificial intelligence, privacy and security, and human-computer interaction.

RE Touch Lab

The RE Touch Lab is investigating the perceptual and mechanical basis of active touch perception, or haptics, and the development of new technologies for stimulating the sense of touch, allowing people to touch, feel, and interact with digital content as seamlessly as we do with objects in the real world. We study the scientific foundations of haptic perception and action, and the neuroscientific and biomechanical basis of touch, with a long-term goal of uncovering the fundamental perceptual and mechanical computations that enable haptic interaction. We also create new technologies for rendering artificial touch sensations that simulate those that are experienced when interacting with real objects, inspired by new findings on haptic perception.

Testbed for Power-Performance Management of Enterprise Computing Systems

This computing testbed is used to validate techniques and algorithms aimed at managing the performance and power consumption of enterprise computing systems. The testbed comprises a rack of Dell 2950 and Dell 1950 PowerEdge servers, as well as assorted desktop machines, networked via a gigabit switch. Virtualization of this cluster is enabled by VMWare's ESX Server running the Linux RedHat kernel. It also comprises of a rack of ten Apple Xserve machines networked via a gigabit switch. These servers run the OS X Leopard operating systems and have access to a RAID with TBs of total disk capacity.

Cybersecurity Faculty

Kapil Dandekar, PhD *(University of Texas-Austin) Director of the Drexel Wireless Systems Laboratory (DWSL); Associate Dean of Research, College of Engineering*. Professor. Cellular/mobile communications and wireless LAN; smart antenna/MIMO for wireless communications; applied computational electromagnetics; microwave antenna and receiver development; free space optical communication; ultrasonic communication; sensor networks for homeland security; ultrawideband communication.

Rachel Greenstadt, PhD *(Harvard University)*. Associate Professor. Artificial intelligence, privacy, security, multi-agent systems, economics of electronic privacy and information security.

Constantine Katsinis, PhD *(University of Rhode Island)*. Teaching Professor. High-performance computer networks, parallel computer architectures with sustained teraflops performance, computer security, image processing.

Steven Weber, PhD *(University of Texas-Austin) Assistant Department Head for Graduate Affairs, Electrical and Computer Engineering*. Associate Professor. Mathematical modeling of computer and communication networks, specifically streaming multimedia and ad hoc networks.

Christopher C. Yang, PhD *(University of Arizona, Tucson)*. Associate Professor. Web search and mining, security informatics, knowledge management, social media analytics, cross-lingual information retrieval, text summarization, multimedia retrieval, information visualization, information sharing and privacy, artificial intelligence, digital library, and electronic commerce.

Electrical Engineering MSEE

Major: Electrical Engineering
Degree Awarded: Master of Science in Electrical Engineering (MSEE)
Calendar Type: Quarter
Minimum Required Credits: 45.0
Co-op Option: Available for full-time, on-campus master's-level students
Classification of Instructional Programs (CIP) code: 14.1001
Standard Occupational Classification (SOC) code: 17-2071

About the Program

The graduate program in electrical engineering prepares students for careers in research and development, equipping them with advanced skills and knowledge to address new technical and scientific challenges in the rapidly evolving field. The program offers coursework in six key areas: computer engineering; control, robotics and intelligent systems; electrophysics; image and signal processing and interpretation; power engineering and energy; and telecommunications and networking.

The degree requires a minimum of 45 approved credits. The curriculum is customizable, with students developing their plan of study in consultation with their academic advisor.

Graduates emerge as professionals prepared to tackle the rapid changes in design, construction, and use of components, devices, and systems incorporating electronics and magnetism. The MS in Electrical Engineering allows students to contribute to this constantly advancing discipline, which has significant impacts on public welfare and safety, health and healthcare, the environment, quality of life, transportation, and computing.

Drexel's combination of theory, hands-on learning, and career development helps students gain industry insights, develop a global perspective, and build entrepreneurial, teambuilding, and managerial abilities crucial for career advancement in industry and research or preparation for doctoral studies in electrical engineering or related fields.

Students also have the option to engage in an MS thesis or independent research under the supervision of an ECE faculty member. The MS program is designed so that a student may complete the degree requirements in less than 2 years of full-time study or 2-3 years of part-time study.

Full-time on campus students who start in a fall term are eligible to take part in the Graduate Co-op Program, which combines classroom coursework with a 6-month, full-time work experience. For more information, visit the Steinbright Career Development Center's website (http://www.drexel.edu/scdc/co-op/graduate/) or visit the Drexel Engineering Graduate Co-op webpage (https://drexel.edu/engineering/academics/experiential-learning-co-op/graduate-co-ops/).

Additional Information

For more information, please visit the MS in Electrical Engineering program and Electrical and Computer Engineering Department website.

Admission Requirements

Applicants must satisfy general requirements for graduate admission, including a minimum 3.0 GPA (on a 4.0 scale) for the last two years of undergraduate studies, as well as for any subsequent graduate work, and hold a bachelor's degree in electrical engineering, computer engineering, or the equivalent from an accredited college or university. A degree in science (physics, mathematics, computer science, etc.) is also acceptable. An undergraduate degree earned abroad must be deemed equivalent to a US bachelor's degree.

The GRE general test is optional for all applicants. TOEFL, IELTS, PTE, or Duolingo is required if the language of instruction of your previous degree was not English.

For additional information on how to apply and deadlines, visit the College of Engineering's Admission Guidelines (https://drexel.edu/engineering/admissions/graduate/admission-guidelines/) or Drexel's admissions page for Electrical Engineering (http://www.drexel.edu/grad/programs/coe/electrical-engineering/).

Degree Requirements

The Master of Science in Electrical Engineering curriculum encompasses 45.0 or 46.0 (with the Graduate Co-op option) approved credit hours,

chosen in accordance with the following requirements and a plan of study arranged with the departmental graduate advisor in consultation with the student's research advisor, if applicable. Before the end of the first quarter in the Department of Electrical and Computer Engineering, for a full-time student, or by the end of the first year for a part-time student, said plan of study must be filed and approved with the departmental graduate advisor.

A total of at least 30.0 credit hours must be taken from among the graduate course offerings of the Department of Electrical and Computer Engineering. These credits must be taken at Drexel University. No transfer credit may be used to fulfill these requirements, regardless of content equivalency.

The remaining courses needed to reach the minimum credit hour requirement for the degree program are considered elective courses. Elective courses can be chosen from among the graduate course offerings of the Department of Electrical and Computer Engineering; other departments within the College of Engineering; the School of Biomedical Science, Engineering and Health Systems; the Department of Mathematics; the Department of Physics; the Department of Chemistry and the Department of Biology. In order to have courses outside of these departments and schools count towards degree completion, they must be approved by the departmental graduate advisors prior to registration for said courses.

Please note that ECEC 500 *Fundamentals of Computer Hardware* and ECEC 600 *Fundamentals of Computer Networks* do **not** count toward the credit requirements to complete the MS in Electrical Engineering degree program.

Required Courses		
Electrical Engineering Core Courses		
Select 21.0 credits of 500-999 level courses from the list below, unless otherwise specified:		21.0
Any ECEE (Elec & Computer Engr-Electroph)		
Any ECEP (Elec & Computer Engr-Power Eng)		
Any ECES (Elec & Computer Engr-Systems)		
Any ECET (Telecommunications)		
ECE 513	Introduction to Radar	
ECE 514	Basic Electronic Warfare Concepts	
ECE 531	Modern Transistors	
ECE 603	Computing and Control	
ECE 608	Decision-Making for Robotics	
ECE 609	Mobile Sensing and Motion Planning	
ECE 610	Machine Learning & Artificial Intelligence	
ECE 612	Applied Machine Learning Engineering	
ECE 613	Neuromorphic Computing	
ECE 617	Reinforcement Learning	
ECE 686	Cell & Tissue Image Analysis	
ECE 687	Pattern Recognition	
General Electrical and Computer Engineering		
Select 9.0 credits of 500-999 level courses from the list below:		9.0
Any ECE (Electrical Engineering)		
Any ECEC (Elec & Comp Engr-Computers)		
Any ECEE (Elec & Computer Engr-Electroph)		
Any ECEP (Elec & Computer Engr-Power Eng)		
Any ECES (Elec & Computer Engr-Systems)		
Any ECET (Telecommunications)		
Elective Courses		
Select 15.0 credits of 500-999 level courses from the list below:		15.0
Any AE (Architectural Engineering)		
Any BIO (Bioscience & Biotechnology)		
Any BMES (Biomedical Engineering & Sci)		
Any CHE (Chemical Engineering)		
Any CHEM (Chemistry)		
Any CIVE (Civil Engineering)		
Any CMGT (Construction Management)		
Any CS (Computer Science)		
Any ECE (Electrical Engineering)		
Any ECEC (Elec & Comp Engr-Computers)		
Any ECEE (Elec & Computer-Engr-Electroph)		
Any ECEP (Elec & Computer Engr-Power Eng)		
Any ECES (Elec & Computer Engr-Systems)		
Any ECET (Telecommunications)		
Any EGMT (Engineering Management)		
Any ENGR (Engineering, General)		
Any ENTP (Entrepreneurship)		
Any ENVE (Environmental Engineering)		
Any ET (Engineering Technology)		
Any MATE (Materials Engineering)		
Any (MATH) Mathematics		
Any MEM (Mechanical Engr & Mechanics)		
Any MGMT (Management)		
Any MIS (Management Information Systems)		
Any OPR (Operations Research)		
Any PHYS (Physics)		
Any PROJ (Project Management)		
Any SYSE (Systems Engineering)		
Optional Co-op Experience *		**0-1**
COOP 500	Career Management and Professional Development for Master's Degree Students	
Total Credits		**45.0-46.0**

*****

Co-op is an option for this degree for full-time on-campus students.
To prepare for the 6-month co-op experience, students will complete: COOP 500. The total credits required for this degree with the co-op experience is 46.0
Students not participating in the co-op experience will need 45.0 credits to graduate.

Options for Degree Fulfillment

Although not required, students are encouraged to complete a Master's Thesis as part of the MS studies. Those students who choose the thesis option may count up to 9.0 research/thesis credits as part of their required credit hour requirements.

Students may choose to participate in the Graduate Co-op Program, where 6.0 credit hours can be earned for a six month cooperative education experience in industry, working on curriculum related projects. The total number of required credit hours is increased to 48.0 for those students who choose to pursue the Graduate Co-op option. This change represents an increase in non-departmental required credit hours to a total of 18.0 credit hours, 6.0 of which are earned from the cooperative education experience.

Additional Information

For more information on curricular requirements, visit the Department of Electrical and Computer Engineering' (http://www.ece.drexel.edu/)s website.

Facilities

Drexel University and the Electrical and Computer Engineering Department are nationally recognized for a strong history of developing innovative research. Research programs in the ECE Department prepare students for careers in research and development, and aim to endow graduates with the ability to identify, analyze, and address new technical and scientific challenges. The ECE Department is well equipped with state-of-the-art facilities in each of the following ECE Research laboratories:

Research Laboratories at the ECE Department

Adaptive Signal Processing and Information Theory Research Group

The Adaptive Signal Processing and Information Theory Research Group conducts research in the area of signal processing and information theory. Our main interests are belief/expectation propagation, turbo decoding and composite adaptive system theory. We are currently doing projects on the following topics:

- Delay mitigating codes for network coded systems
- Distributed estimation in sensor networks via expectation propagation
- Turbo speaker identification
- Performance and convergence of expectation propagation
- Investigating bounds for SINR performance of autocorrelation based channel shorteners

Applied Networking Research Lab

Applied Networking Research Lab (ANRL) projects focus on modeling and simulation as well as experimentation in wired, wireless and sensor networks. ANRL is the home of MuTANT, a Multi-Protocol Label Switched Traffic Engineering and Analysis Testbed composed of 10 high-end Cisco routers and several PC-routers, also used to study other protocols in data networks as well as automated network configuration and management. The lab also houses a sensor network testbed.

Bioimage Laboratory

Uses computer gaming hardware for enhanced and affordable 3-D visualization, along with techniques from information theory and machine learning to combine the exquisite capabilities of the human visual system with computational sensing techniques for analyzing vast quantities of image sequence data.

Data Fusion Laboratory

The Data Fusion Laboratory investigates problems in multisensory detection and estimation, with applications in robotics, digital communications, radar, and target tracking. Among the projects in progress: computationally efficient parallel distributed detection architectures, data fusion for robot navigation, modulation recognition and RF scene analysis in time-varying environments, pattern recognition in biological data sequences and large arrays, and hardware realizations of data fusion architectures for target detection and target tracking.

Drexel Network Modeling Laboratory

The Drexel Network Modeling Laboratory investigates problems in the mathematical modeling of communication networks, with specific focus on wireless ad hoc networks, wireless sensor networks, and supporting guaranteed delivery service models on best effort and multipath routed networks. Typical methodologies employed in our research include mathematical modeling, computer simulation, and performance optimization, often with the end goal of obtaining meaningful insights into network design principles and fundamental performance tradeoffs.

Drexel Power-Aware Computing Laboratory

The Power-Aware Computing Lab investigates methods to increase energy efficiency across the boundaries of circuits, architecture, and systems. Our recent accomplishments include the Sigil profiling tool, scalable modeling infrastructure for accelerator implementations, microarchitecture-aware VDD gating algorithms, an accelerator architecture for ultrasound imaging, evaluation of hardware reference counting, hardware and operating system support for power-agile computing, and memory systems for accelerator-based architectures.

Drexel University Nuclear Engineering Education Laboratory

The field of nuclear engineering encompasses a wide spectrum of occupations, including nuclear reactor design, medical imaging, homeland security, and oil exploration. The Drexel University Nuclear

Engineering Education Laboratory (DUNEEL) provides fundamental hands on understanding for power plant design and radiation detection and analysis. Software based study for power plant design, as well as physical laboratory equipment for radiation detection, strengthen the underlying concepts used in nuclear engineering such that the student will comprehend and appreciate the basic concepts and terminology used in various nuclear engineering professions. Additionally, students use the laboratory to develop methods for delivering remote, live time radiation detection and analysis. The goal of DUNEEL is to prepare students for potential employment in the nuclear engineering arena.

Drexel VLSI Laboratory

The Drexel VLSI Laboratory investigates problems in the design, analysis, optimization and manufacturing of high performance (low power, high throughput) integrated circuits in contemporary CMOS and emerging technologies. Suited with industrial design tools for integrated circuits, simulation tools and measurement beds, the VLSI group is involved with digital and mixed-signal circuit design to verify the functionality of the discovered novel circuit and physical design principles. The Drexel VLSI laboratory develops design methodologies and automation tools in these areas, particularly in novel clocking techniques, featuring resonant clocking, and interconnects, featuring wireless interconnects.

Drexel Wireless Systems Laboratory

The Drexel Wireless Systems Laboratory (DWSL) contains an extensive suite of equipment for constructing, debugging, and testing prototype wireless communications systems. Major equipment within DWSL includes:

- software defined radio network testbeds for rapidly prototyping new communications and network systems,
- electromagnetic anechoic chamber and reverberation chambers for testing new wireless technologies,
- experimental cell tower for field testing new wireless technologies.

The lab is also equipped with network analyzers, high speed signal generators, oscilloscopes, and spectrum analyzers as well as several Zigbee development platforms for rapidly prototyping sensor networks. The lab offers laboratory coursework in wireless network security, collaborative intelligent radio networks, and fundamental analog and digital communication systems.

Ecological and Evolutionary Signal-processing and Informatics Laboratory

The Ecological and Evolutionary Signal-processing and Informatics Laboratory (EESI) seeks to solve problems in high-throughput genomics and engineer better solutions for biochemical applications. The lab's primary thrust is to enhance the use of high-throughput DNA sequencing technologies with pattern recognition and signal processing techniques. Applications include assessing the organism content of an environmental sample, recognizing/classifying potential and functional genes, inferring environmental factors and inter-species relationships, and inferring microbial evolutionary relationships from short-read DNA/RNA fragments. The lab also investigates higher-level biological systems such as modeling and controlling chemotaxis, the movement of cells.

Electric Power Engineering Center

This newly established facility makes possible state-of-the-art research in a wide variety of areas, ranging from detailed theoretical model study to experimental investigation in its high voltage laboratories. The mission is to advance and apply scientific and engineering knowledge associated with the generation, transmission, distribution, use, and conservation of electric power. In pursuing these goals, this center works with electric utilities, state and federal agencies, private industries, nonprofit organizations and other universities on a wide spectrum of projects. Research efforts, both theoretical and experimental, focus on the solution of those problems currently faced by the electric power industry. Advanced concepts for electric power generation are also under investigation to ensure that electric power needs will be met at the present and in the future.

Electronic Design Automation Facility

Industrial-grade electronic design automation software suite and intergrated design environment for digital, analog and mixed-signal systems development. Field Programmable Gate Array (FPGA) development hardware. Most up-to-date FPGA/embedded system development hardware kits. Printed circuit board production facility. Also see Drexel VLSI Laboratory.

Microwave-Photonics Device Laboratories

The laboratory is equipped with test and measurement equipment for high-speed analog and digital electronics and fiber optic systems. The test equipment includes network analyzers from Agilent (100kHz- 1.3 GHz and 45 Mhz-40 GHz), and Anritsu (45 MHz-6 GHz); spectrum analyzers from Tektronix, HP, and Agilent with measurement capability of DC to 40 GHz and up to 90 GHz using external mixers; signal generators and communication channel modulators from HP, Rhode-Schwartz, Systron Donner, and Agilent; microwave power meter and sensor heads, assortment of passive and active microwave components up to 40 GHz ; data pattern generator and BER tester up to 3Gb/s; optical spectrum analyzer from Anritsu and power meters from HP; single and multimode fiber optic based optical transmitter and receiver boards covering ITU channels at data rates up to 10Gb/s; passive optical components such as isolator, filter, couplers, optical connectors and fusion splicer; LPKF milling machine for fabrication of printed circuit boards; wire-bonding and Cascade probe stations; Intercontinental test fixtures for testing of MMIC circuits and solid-state transistors; state-of-the-art microwave and electromagnetic CAD packages such as Agilent ADS, ANSYS HFSS, and COMSOL multi-physics module.

Multimedia & Information Security Lab [MISL]

The Multimedia and Information Security Lab (MISL) develops algorithms to detect fake images and videos, along with algorithms to determine the true source an image or video. This research is particularly important because widely available editing software enables multimedia forgers to create perceptually realistic forgeries. Our goal at MISL, is to conduct research that provides information verification and security in scenarios when an information source cannot be trusted.

The research conducted at MISL is part of a new area, known as multimedia forensics, which lies at the intersection of many areas in machine learning and artificial intelligence, signal processing, image and video processing, game theory, etc. Our algorithms work by identifying or learning visually imperceptible traces left in images and videos by processing operations. We use these traces to detect editing or forgery as well as to link an image or video back to the camera that captured it. We also perform research on anti-forensic operations designed to fool forensic techniques. By studying anti-forensics, researchers can identify and address weaknesses in existing forensic techniques as well as develop techniques capable of identifying the use of anti-forensics.

Music and Entertainment Technology Laboratory

The Music and Entertainment Technology Laboratory (MET-lab) is devoted to research in digital media technologies that will shape the future of entertainment, especially in the areas of sound and music. We employ digital signal processing and machine learning to pursue novel applications in music information retrieval, music production and processing technology, and new music interfaces. The MET-lab is also heavily involved in outreach programs for K-12 students and hosts the Summer Music Technology program, a one-week learning experience for high school students. Lab facilities include a sound isolation booth for audio and music recording, a digital audio workstation running ProTools, two large multi-touch display interfaces of our own design, and a small computing cluster for distributed processing.

NanoPhotonics+ Lab

Our research is primarily in the area of nanophotonics with a focus on the nanoscale interaction of light with matter. Interests include: liquid crystal/polymer composites for gratings, lenses and HOEs; liquid crystal interactions with surfaces and in confined nanospaces; alternative energy generation through novel photon interactions; ink-jet printed conducting materials for RF and photonic applications; and the creation and development of smart textiles technologies including soft interconnects, sensors, and wireless implementations.

Opto-Electro-Mechanical Laboratory

This lab concentrates on the system integration on optics, electronics, and mechanical components and systems, for applications in imaging, communication, and biomedical research. Research areas include: Programmable Imaging with Optical Micro-electrical-mechanical systems (MEMS), in which microscopic mirrors are used to image light into a single photodetector; Pre-Cancerous Detection using White Light Spectroscopy, which performs a cellular size analysis of nuclei in tissue; Free-space Optical Communication using Space Time Coding, which consists of diffused light for computer-to-computer communications, and also tiny lasers and detectors for chip-to-chip communication; Magnetic Particle Locomotion, which showed that particles could swim in a uniform field; and Transparent Antennas using Polymer, which enables antennas to be printed through an ink-jet printer.

Plasma and Magnetics Laboratory

Research is focused on applications of electrical and magnetic technologies to biology and medicine. This includes the subjects of non-thermal atmospheric pressure plasma for medicine, magnetic manipulation of particles for drug delivery and bio-separation, development of miniature NMR sensors for cellular imaging and carbon nanotube cellular probes.

Power Electronics Research Laboratory

The Power Electronics Research Laboratory (PERL) is involved in circuit and design simulation, device modeling and simulation, and experimental testing and fabrication of power electronic circuits. The research and development activities include electrical terminations, power quality, solar photovoltaic systems, GTO modeling, protection and relay coordination, and solid-state circuit breakers. The analysis tools include EMPT, SPICE, and others, which have been modified to incorporate models of such controllable solid-state switches as SCRs, GTOs, and MOSFETs. These programs have a wide variety and range of modeling capabilities used to model electromagnetics and electromechanical transients ranging from microseconds to seconds in duration. The PERL is a fully equipped laboratory with 42 kVA AC and 70 kVA DC power sources and data acquisition systems, which have the ability to display and store data for detailed analysis. Some of the equipment available is a distribution and HV transformer and three phase rectifiers for power sources and digital oscilloscopes for data measuring and experimental analysis. Some of the recent studies performed by the PERL include static VAR compensators, power quality of motor controllers, solid-state circuit breakers, and power device modeling which have been supported by PECO, GE, Gould, and EPRI.

RE Touch Lab

The RE Touch Lab is investigating the perceptual and mechanical basis of active touch perception, or haptics, and the development of new technologies for stimulating the sense of touch, allowing people to touch, feel, and interact with digital content as seamlessly as we do with objects in the real world. We study the scientific foundations of haptic perception and action, and the neuroscientific and biomechanical basis of touch, with a long-term goal of uncovering the fundamental perceptual and mechanical computations that enable haptic interaction. We also create new technologies for rendering artificial touch sensations that simulate those that are experienced when interacting with real objects, inspired by new findings on haptic perception.

Testbed for Power-Performance Management of Enterprise Computing Systems

This computing testbed is used to validate techniques and algorithms aimed at managing the performance and power consumption of enterprise computing systems. The testbed comprises a rack of Dell 2950 and Dell 1950 PowerEdge servers, as well as assorted desktop machines, networked via a gigabit switch. Virtualization of this cluster is enabled by VMWare's ESX Server running the Linux RedHat kernel. It also comprises of a rack of ten Apple Xserve machines networked via a gigabit switch. These servers run the OS X Leopard operating systems and have access to a RAID with TBs of total disk capacity.

Program Level Outcomes

- Apply knowledge of mathematics, science, and engineering
- Design and conduct experiments, as well as to analyze and interpret data
- Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- Function on multidisciplinary teams
- Identify, formulate, and solve engineering problems
- Understand professional and ethical responsibility
- Communicate effectively
- Understand the impact of engineering solutions in a global, economic, environmental, and societal context
- Recognize the need for, and an ability to engage in life-long learning
- Attain knowledge of contemporary issues
- Use the techniques, skills, and modern engineering tools necessary for engineering practice

Electrical Engineering Faculty

Suryadevara Basavaiah, PhD *(University of Pennsylvania)*. Teaching Professor. Computer engineering; computer engineering education; custom circuit design; VLSI technology; process and silicon fabrication

Tom Chmielewski, PhD *(Drexel University)*. Assistant Teaching Professor. Modeling and simulation of electro-mechanical systems; optimal, adaptive and non-linear control; DC motor control; system identification; kalman filters (smoothing algorithms, tracking); image processing; robot design; biometric technology and design of embedded systems for control applications utilizing MATLAB and SIMULINK

Fernand Cohen, PhD *(Brown University)*. Professor. Surface modeling; tissue characterization and modeling; face modeling; recognition and tracking.

Andrew Cohen, PhD *(Rensselaer Polytechnic Institute)*. Associate Professor. Image processing; multi-target tracking; statistical pattern recognition and machine learning; algorithmic information theory; 5-D visualization

Kapil Dandekar, PhD *(University of Texas-Austin) Director of the Drexel Wireless Systems Laboratory (DWSL); Associate Dean of Research, College of Engineering*. Professor. Cellular/mobile communications and wireless LAN; smart antenna/MIMO for wireless communications; applied computational electromagnetics; microwave antenna and receiver development; free space optical communication; ultrasonic communication; sensor networks for homeland security; ultrawideband communication.

Afshin Daryoush, ScD *(Drexel University)*. Professor. Digital and microwave photonics; nonlinear microwave circuits; RFIC; medical imaging.

Bruce A. Eisenstein, PhD *(University of Pennsylvania) Vice Dean, College of Engineering; Arthur J. Rowland Professor*. Professor. Pattern recognition; estimation; decision theory.

Adam K. Fontecchio, PhD *(Brown University) Vice Dean, Graduate College*. Professor. Electro-optics; remote sensing; active optical elements; liquid crystal devices.

Gary Friedman, PhD *(University of Maryland-College Park)*. Professor. Biological and biomedical applications of nanoscale magnetic systems.

Eli Fromm, PhD *(Jefferson Medical College) LeRoy A. Brothers University Professor / Director for Center of Educational Research*. Professor. Engineering education; academic research policy; bioinstrumentation; physiologic systems.

Edwin L. Gerber, PhD *(University of Pennsylvania)*. Professor. Computerized instruments and measurements; undergraduate engineering education.

Allon Guez, PhD *(University of Florida)*. Professor. Intelligent control systems; robotics, biomedical, automation and manufacturing; business systems engineering.

Peter R. Herczfeld, PhD *(University of Minnesota) Lester A. Kraus Professor/Director, Center for Microwave/Lightwave Engineering*. Professor. Lightwave technology; microwaves; millimeter waves; fiberoptic and integrated optic devices.

Leonid Hrebien, PhD *(Drexel University)*. Professor. Tissue excitability; acceleration effects on physiology; bioinformatics.

Nagarajan Kandasamy, PhD *(University of Michigan) Associate Department Head for Graduate Affairs*. Associate Professor. Embedded systems, self-managing systems, reliable and fault-tolerant computing, distributed systems, computer architecture, and testing and verification of digital systems.

Bruce Katz, PhD *(University of Illinois)*. Adjunct Professor. Speech communication and computer science; artificial intelligence.

Youngmoo Kim, PhD *(MIT)*. Associate Professor. Audio and music signal processing, voice analysis and synthesis, music information retrieval, machine learning.

Timothy P. Kurzweg, PhD *(University of Pittsburgh)*. Associate Professor. Micro-optical systems; optical spectroscopy; programmable imaging with MEMS; bio-sensors; diffuse optical communication; MEMS fabrication; diffractive optics; optical automation; optical modeling and simulation; magnetic particle locomotion; meta-materials; reconfigurable antennas

John Lacontora, PhD *(New Jersey Institute of Technology)*. Associate Research Professor. Service engineering; industrial engineering.

Karen Miu, PhD *(Cornell University)*. Professor. Power systems; distribution networks; distribution automation; optimization; system analysis.

Bahram Nabet, PhD *(University of Washington) Associate Dean for Special Projects, College of Engineering; Electrical and Computer Engineering*. Professor. Optoelectronics; fabrication and modeling; fiber optic devices; nanoelectronics; nanowires.

Prawat Nagvajara, Ph.D. *(Boston University)*. Associate Professor. System on a chip; embedded systems; power grid computation; testing of computer hardware; fault-tolerant computing; VLSI systems; error control coding.

Dagmar Niebur, PhD *(Swiss Federal Institute of Technology)*. Associate Professor. Intelligent systems; dynamical systems; power system monitoring and control.

Chika Nwankpa, PhD *(Illinois Institute of Technology) ECE Department Head*. Professor. Power system dynamics; power electronic switching systems; optically controlled high power switches.

Christopher Peters, PhD *(University of Michigan)*. Teaching Professor. Nuclear reactor design; ionizing radiation detection; nuclear forensics; power plant reliability and risk analysis; naval/marine power and propulsion; directed energy/high power microwaves; nonstationary signal processing; radar; electronic survivability/susceptibility to harsh environments; electronic warfare

Karkal S. Prahbu, PhD *(Harvard University)*. Auxiliary Professor. Computer and software engineering; advanced microprocessors and distributed operating systems.

William C. Regli, PhD *(University of Maryland-College Park)*. Professor. Artificial intelligence; computer graphics; engineering design and Internet computing.

Gail L. Rosen, PhD *(Georgia Institute of Technology)*. Associate Professor. Signal processing, signal processing for biological analysis and modeling, bio-inspired designs, source localization and tracking.

Ionnis Savidis, PhD *(University of Rochester)*. Assistant Professor. Analysis, modeling, and design methodologies for high performance digital and mixed-signal integrated circuits; Emerging integrated circuit technologies; Electrical and thermal modeling and characterization, signal and power integrity, and power and clock delivery for 3-D IC technologies

Kevin J. Scoles, PhD *(Dartmouth College)*. Associate Professor. Microelectronics; electric vehicles; solar energy; biomedical electronics.

Harish Sethu, PhD *(Lehigh University)*. Associate Professor. Protocols, architectures and algorithms in computer networks; computer security; mobile ad hoc networks; large-scale complex adaptive networks and systems.

James Shackleford, PhD *(Drexel University)*. Assistant Professor. Medical image processing, high performance computing, embedded systems, computer vision, machine learning

P. Mohana Shankar, PhD *(Indian Institute of Technology) Allen Rothwarf Professor of Electrical and Computer Engineering*. Professor. Wireless communications; biomedical ultrasonics; fiberoptic bio-sensors.

Jonathan E. Spanier, PhD *(Columbia University) Associate Dean, Strategic Planning, College of Engineering*. Professor. Light-matter interactions in electronic materials, including ferroelectric semiconductors, complex oxide thin film science; laster spectroscopy, including Raman scattering.

Matthew Stamm, PhD *(University of Maryland, College Park)*. Assistant Professor. Information Security; multimedia forensics and anti-forensics; information verification; adversarial dynamics; signal processing

Jaudelice Cavalcante de Oliveira, PhD *(Georgia Institute of Technology)*. Associate Professor. Software-defined networking; social and economic networks; network security; design and analysis of protocols, algorithms and architectures in computer networks, particularly solutions for the Internet of Things

Electrical Engineering PhD

Major: Electrical Engineering
Degree Awarded: Doctor of Philosophy (PhD)
Calendar Type: Quarter
Minimum Required Credits: 90.0
Co-op Option: None
Classification of Instructional Programs (CIP) code: 14.1001
Standard Occupational Classification (SOC) code: 17-2071

About the Program

The program in electrical engineering prepares students for careers in research and development, and aims to endow graduates with the ability to identify, analyze and address new technical and scientific challenges. At present, the department offers graduate coursework in six general areas: (1) computer engineering; (2) control, robotics and intelligent systems; (3) electrophysics; (4) image and signal processing and interpretation; (5) power engineering and energy; and (6) telecommunications and networking.

A student's plan of study must contain a selection of courses from the department's offerings and may include appropriate graduate elective courses from other engineering departments or from physics or mathematics. Further information can be obtained from the department website or from the graduate advisor.

Students are also encouraged to engage in thesis research. The combined thesis and research cannot exceed 9.0 credits.

Additional Information

For more information, please visit the Doctorate in Electrical Engineering program (https://drexel.edu/engineering/academics/graduate-programs/doctoral/electrical-engineering/) and Electrical and Computer Engineering Department (https://drexel.edu/engineering/academics/departments/electrical-computer-engineering/) website.

Admission Requirements

Applicants must satisfy general requirements for graduate admission, including a minimum 3.0 GPA (on a 4.0 scale) for the last two years of undergraduate studies, as well as for any subsequent graduate work, and hold a bachelor's degree in electrical engineering, computer engineering, or the equivalent from an accredited college or university. A degree in science (physics, mathematics, computer science, etc.) is also acceptable. Applicants with degrees in sciences may be required to take a number of undergraduate engineering courses. An undergraduate degree earned abroad must be deemed equivalent to a US bachelor's.

Applicants for full-time PhD programs must take the GRE general test. Students whose native language is not English and who do not hold a degree from a US institution must take the TOEFL within two years before application.
For additional information on how to apply, visit Drexel's Admissions page for Electrical Engineering (http://www.drexel.edu/grad/programs/coe/electrical-engineering/).

Degree Requirements

General Requirements

The following general requirements must be satisfied in order to complete the PhD in Electrical Engineering:

- 90.0 credit hours total
- candidacy examination
- research proposal
- dissertation defense

Students entering with a master’s degree in electrical or computer engineering or a related field will be considered a post-masters PhD student and will only be required to complete a total of 45.0 credit hours, in accordance with University policy.

Curriculum

Appropriate coursework is chosen in consultation with the student’s research advisor. A plan of study must be developed by the student to encompass the total number of required credit hours. Both the departmental graduate advisor and the student’s research advisor must approve this plan.

Candidacy Examination

The candidacy examination explores the depth of understanding of the student in his/her specialty area. The student is expected to be familiar with, and be able to use, the contemporary tools and techniques of the

field and to demonstrate familiarity with the principal results and key findings.

The student, in consultation with his/her research advisor, will declare a principal technical area for the examination. The examination includes the following three parts:

- A self-study of three papers from the archival literature in the student's stated technical area, chosen by the committee in consultation with the student.
- A written report (15 pages or less) on the papers, describing their objectives, key questions and hypotheses, methodology, main results and conclusions. Moreover, the student must show in an appendix independent work he/she has done on at least one of the papers – such as providing a full derivation of a result or showing meaningful examples, simulations or applications.
- An oral examination which takes the following format:
  - A short description of the student's principal area of interest (5 minutes, by student).
  - A review of the self-study papers and report appendix (25-30 minutes, by student).
  - Questions and answers on the report, the appendix and directly related background (40-100 minutes, student and committee).

In most cases, the work produced during the candidacy examination will be a principal reference for the student's PhD dissertation; however, this is not a requirement.

Research Proposal

After having attained the status of PhD Candidate, each student must present a research proposal to a committee of faculty and industry members, chosen with his/her research advisor, who are knowledgeable in the specific area of research. This proposal should outline the specific intended subject of study, i.e., it should present a problem statement, pertinent background, methods of study to be employed, expected difficulties and uncertainties and the anticipated form, substance and significance of the results.

The purpose of this presentation is to verify suitability of the dissertation topic and the candidate's approach, and to obtain the advice and guidance of oversight of mature, experienced investigators. It is not to be construed as an examination, though approval by the committee is required before extensive work is undertaken. The thesis proposal presentation must be open to all; announcements regarding the proposal presentation must be made in advance.

The thesis advisory committee will have the sole responsibility of making any recommendations regarding the research proposal. It is strongly recommended that the proposal presentation be given as soon as possible after the successful completion of the candidacy examination.

Dissertation Defense

Dissertation Defense procedures are described in the Office of Graduate Studies (http://www.drexel.edu/graduatecollege/) policies regarding Doctor of Philosophy Program Requirements. The student must be a PhD candidate for at least one year before he/she can defend his/her doctoral thesis.

Program Requirements

Post-Bachelor's PhD Student

ECE 997	Dissertation Research	9.0
or ECE 998	Ph.D. Dissertation	
Students must complete 81.0 graduate credits (500+ level) from approved College of Engineering departments *		81.0
Total Credits		**90.0**

*

Approved graduate coursework (500+ level) from Any College of Engineering, any College of Computing and Informatics, MATH, PHYS, COOP, ISTM, MTED, OPR, BMES, BIO, CHEM, ENVS, ENVP, LING, SCTS, DIGM, BST, EPI, or CIE course.
Additional courses may be considered upon approval from the Department of Electrical and Computer Engineering.

Post-Master's PhD Student

ECE 997	Dissertation Research	9.0
or ECE 998	Ph.D. Dissertation	
Students must complete 36.0 graduate credits (500+ level) from approved College of Engineering departments *		36.0
Total Credits		**45.0**

*

Approved graduate coursework (500+ level) from Any College of Engineering, any College of Computing and Informatics, MATH, PHYS, COOP, ISTM, MTED, OPR, BMES, BIO, CHEM, ENVS, ENVP, LING, SCTS, DIGM, BST, EPI, or CIE course.
Additional courses may be considered upon approval from the Department of Electrical and Computer Engineering.

Sample Plan of Study

Post-Bachelor's PhD Student

First Year

Fall	Credits	Winter	Credits	Spring	Credits	Summer	Credits
ECE 997 or 998	9.0	Graduate Coursework	9.0	Graduate Coursework	9.0	VACATION	
	9		**9**		**9**		**0**

Second Year

Fall	Credits	Winter	Credits	Spring	Credits	Summer	Credits
Graduate Coursework	9.0	Graduate Coursework	9.0	Graduate Coursework	9.0	VACATION	
	9		**9**		**9**		**0**

Facilities

Drexel University and the Electrical and Computer Engineering Department are nationally recognized for a strong history of developing innovative research. Research programs in the ECE Department prepare students for careers in research and development, and aim to endow graduates with the ability to identify, analyze, and address new technical and scientific challenges. The ECE Department is well equipped with state-of-the-art facilities in each of the following ECE Research laboratories:

Research Laboratories at the ECE Department

Adaptive Signal Processing and Information Theory Research Group

The Adaptive Signal Processing and Information Theory Research Group conducts research in the area of signal processing and information theory. Our main interests are belief/expectation propagation, turbo decoding and composite adaptive system theory. We are currently doing projects on the following topics:

- Delay mitigating codes for network coded systems
- Distributed estimation in sensor networks via expectation propagation
- Turbo speaker identification
- Performance and convergence of expectation propagation
- Investigating bounds for SINR performance of autocorrelation based channel shorteners

Applied Networking Research Lab

Applied Networking Research Lab (ANRL) projects focus on modeling and simulation as well as experimentation in wired, wireless and sensor networks. ANRL is the home of MuTANT, a Multi-Protocol Label Switched Traffic Engineering and Analysis Testbed composed of 10 high-end Cisco routers and several PC-routers, also used to study other protocols in data networks as well as automated network configuration and management. The lab also houses a sensor network testbed.

Bioimage Laboratory

Uses computer gaming hardware for enhanced and affordable 3-D visualization, along with techniques from information theory and machine learning to combine the exquisite capabilities of the human visual system with computational sensing techniques for analyzing vast quantities of image sequence data.

Data Fusion Laboratory

The Data Fusion Laboratory investigates problems in multisensory detection and estimation, with applications in robotics, digital communications, radar, and target tracking. Among the projects in progress: computationally efficient parallel distributed detection architectures, data fusion for robot navigation, modulation recognition and RF scene analysis in time-varying environments, pattern recognition in biological data sequences and large arrays, and hardware realizations of data fusion architectures for target detection and target tracking.

Drexel Network Modeling Laboratory

The Drexel Network Modeling Laboratory investigates problems in the mathematical modeling of communication networks, with specific focus on wireless ad hoc networks, wireless sensor networks, and supporting guaranteed delivery service models on best effort and multipath routed networks. Typical methodologies employed in our research include mathematical modeling, computer simulation, and performance optimization, often with the end goal of obtaining meaningful insights into network design principles and fundamental performance tradeoffs.

Drexel Power-Aware Computing Laboratory

The Power-Aware Computing Lab investigates methods to increase energy efficiency across the boundaries of circuits, architecture, and systems. Our recent accomplishments include the Sigil profiling tool, scalable modeling infrastructure for accelerator implementations, microarchitecture-aware VDD gating algorithms, an accelerator architecture for ultrasound imaging, evaluation of hardware reference counting, hardware and operating system support for power-agile computing, and memory systems for accelerator-based architectures.

Drexel University Nuclear Engineering Education Laboratory

The field of nuclear engineering encompasses a wide spectrum of occupations, including nuclear reactor design, medical imaging, homeland security, and oil exploration. The Drexel University Nuclear Engineering Education Laboratory (DUNEEL) provides fundamental hands on understanding for power plant design and radiation detection and analysis. Software based study for power plant design, as well as physical laboratory equipment for radiation detection, strengthen the underlying concepts used in nuclear engineering such that the student will comprehend and appreciate the basic concepts and terminology used in various nuclear engineering professions. Additionally, students use the laboratory to develop methods for delivering remote, live time radiation detection and analysis. The goal of DUNEEL is to prepare students for potential employment in the nuclear engineering arena.

Drexel VLSI Laboratory

The Drexel VLSI Laboratory investigates problems in the design, analysis, optimization and manufacturing of high performance (low power, high throughput) integrated circuits in contemporary CMOS and emerging technologies. Suited with industrial design tools for integrated circuits, simulation tools and measurement beds, the VLSI group is involved with digital and mixed-signal circuit design to verify the functionality of the discovered novel circuit and physical design principles. The Drexel VLSI laboratory develops design methodologies and automation tools in these areas, particularly in novel clocking techniques, featuring resonant clocking, and interconnects, featuring wireless interconnects.

Drexel Wireless Systems Laboratory

The Drexel Wireless Systems Laboratory (DWSL) contains an extensive suite of equipment for constructing, debugging, and testing prototype

wireless communications systems. Major equipment within DWSL includes:

- software defined radio network testbeds for rapidly prototyping new communications and network systems,
- electromagnetic anechoic chamber and reverberation chambers for testing new wireless technologies,
- experimental cell tower for field testing new wireless technologies.

The lab is also equipped with network analyzers, high speed signal generators, oscilloscopes, and spectrum analyzers as well as several Zigbee development platforms for rapidly prototyping sensor networks. The lab offers laboratory coursework in wireless network security, collaborative intelligent radio networks, and fundamental analog and digital communication systems.

Ecological and Evolutionary Signal-processing and Informatics Laboratory

The Ecological and Evolutionary Signal-processing and Informatics Laboratory (EESI) seeks to solve problems in high-throughput genomics and engineer better solutions for biochemical applications. The lab's primary thrust is to enhance the use of high-throughput DNA sequencing technologies with pattern recognition and signal processing techniques. Applications include assessing the organism content of an environmental sample, recognizing/classifying potential and functional genes, inferring environmental factors and inter-species relationships, and inferring microbial evolutionary relationships from short-read DNA/RNA fragments. The lab also investigates higher-level biological systems such as modeling and controlling chemotaxis, the movement of cells.

Electric Power Engineering Center

This newly established facility makes possible state-of-the-art research in a wide variety of areas, ranging from detailed theoretical model study to experimental investigation in its high voltage laboratories. The mission is to advance and apply scientific and engineering knowledge associated with the generation, transmission, distribution, use, and conservation of electric power. In pursuing these goals, this center works with electric utilities, state and federal agencies, private industries, nonprofit organizations and other universities on a wide spectrum of projects. Research efforts, both theoretical and experimental, focus on the solution of those problems currently faced by the electric power industry. Advanced concepts for electric power generation are also under investigation to ensure that electric power needs will be met at the present and in the future.

Electronic Design Automation Facility

Industrial-grade electronic design automation software suite and intergrated design environment for digital, analog and mixed-signal systems development. Field Programmable Gate Array (FPGA) development hardware. Most up-to-date FPGA/embedded system development hardware kits. Printed circuit board production facility. Also see Drexel VLSI Laboratory.

Microwave-Photonics Device Laboratories

The laboratory is equipped with test and measurement equipment for high-speed analog and digital electronics and fiber optic systems. The test equipment includes network analyzers from Agilent (100kHz- 1.3 GHz and 45 Mhz-40 GHz), and Anritsu (45 MHz-6 GHz); spectrum analyzers from Tektronix, HP, and Agilent with measurement capability of DC to 40 GHz and up to 90 GHz using external mixers; signal generators and communication channel modulators from HP, Rhode-Schwartz, Systron Donner, and Agilent; microwave power meter and sensor heads, assortment of passive and active microwave components up to 40 GHz ; data pattern generator and BER tester up to 3Gb/s; optical spectrum analyzer from Anritsu and power meters from HP; single and multimode fiber optic based optical transmitter and receiver boards covering ITU channels at data rates up to 10Gb/s; passive optical components such as isolator, filter, couplers, optical connectors and fusion splicer; LPKF milling machine for fabrication of printed circuit boards; wire-bonding and Cascade probe stations; Intercontinental test fixtures for testing of MMIC circuits and solid-state transistors; state-of-the-art microwave and electromagnetic CAD packages such as Agilent ADS, ANSYS HFSS, and COMSOL multi-physics module.

Multimedia & Information Security Lab [MISL]

The Multimedia and Information Security Lab (MISL) develops algorithms to detect fake images and videos, along with algorithms to determine the true source an image or video. This research is particularly important because widely available editing software enables multimedia forgers to create perceptually realistic forgeries. Our goal at MISL, is to conduct research that provides information verification and security in scenarios when an information source cannot be trusted.

The research conducted at MISL is part of a new area, known as multimedia forensics, which lies at the intersection of many areas in machine learning and artificial intelligence, signal processing, image and video processing, game theory, etc. Our algorithms work by identifying or learning visually imperceptible traces left in images and videos by processing operations. We use these traces to detect editing or forgery as well as to link an image or video back to the camera that captured it. We also perform research on anti-forensic operations designed to fool forensic techniques. By studying anti-forensics, researchers can identify and address weaknesses in existing forensic techniques as well as develop techniques capable of identifying the use of anti-forensics.

Music and Entertainment Technology Laboratory

The Music and Entertainment Technology Laboratory (MET-lab) is devoted to research in digital media technologies that will shape the future of entertainment, especially in the areas of sound and music. We employ digital signal processing and machine learning to pursue novel applications in music information retrieval, music production and processing technology, and new music interfaces. The MET-lab is also heavily involved in outreach programs for K-12 students and hosts the Summer Music Technology program, a one-week learning experience for high school students. Lab facilities include a sound isolation booth for audio and music recording, a digital audio workstation running ProTools, two large multi-touch display interfaces of our own design, and a small computing cluster for distributed processing.

NanoPhotonics+ Lab

Our research is primarily in the area of nanophotonics with a focus on the nanoscale interaction of light with matter. Interests include: liquid crystal/polymer composites for gratings, lenses and HOEs; liquid crystal interactions with surfaces and in confined nanospaces; alternative energy generation through novel photon interactions; ink-jet printed conducting materials for RF and photonic applications; and the creation and development of smart textiles technologies including soft interconnects, sensors, and wireless implementations.

Opto-Electro-Mechanical Laboratory

This lab concentrates on the system integration on optics, electronics, and mechanical components and systems, for applications in imaging, communication, and biomedical research. Research areas include: Programmable Imaging with Optical Micro-electrical-mechanical systems (MEMS), in which microscopic mirrors are used to image light into a single photodetector; Pre-Cancerous Detection using White Light Spectroscopy, which performs a cellular size analysis of nuclei in tissue; Free-space Optical Communication using Space Time Coding, which consists of diffused light for computer-to-computer communications, and also tiny lasers and detectors for chip-to-chip communication; Magnetic Particle Locomotion, which showed that particles could swim in a uniform field; and Transparent Antennas using Polymer, which enables antennas to be printed through an ink-jet printer.

Plasma and Magnetics Laboratory

Research is focused on applications of electrical and magnetic technologies to biology and medicine. This includes the subjects of non-thermal atmospheric pressure plasma for medicine, magnetic manipulation of particles for drug delivery and bio-separation, development of miniature NMR sensors for cellular imaging and carbon nanotube cellular probes.

Power Electronics Research Laboratory

The Power Electronics Research Laboratory (PERL) is involved in circuit and design simulation, device modeling and simulation, and experimental testing and fabrication of power electronic circuits. The research and development activities include electrical terminations, power quality, solar photovoltaic systems, GTO modeling, protection and relay coordination, and solid-state circuit breakers. The analysis tools include EMPT, SPICE, and others, which have been modified to incorporate models of such controllable solid-state switches as SCRs, GTOs, and MOSFETs. These programs have a wide variety and range of modeling capabilities used to model electromagnetics and electromechanical transients ranging from microseconds to seconds in duration. The PERL is a fully equipped laboratory with 42 kVA AC and 70 kVA DC power sources and data acquisition systems, which have the ability to display and store data for detailed analysis. Some of the equipment available is a distribution and HV transformer and three phase rectifiers for power sources and digital oscilloscopes for data measuring and experimental analysis. Some of the recent studies performed by the PERL include static VAR compensators, power quality of motor controllers, solid-state circuit breakers, and power device modeling which have been supported by PECO, GE, Gould, and EPRI.

RE Touch Lab

The RE Touch Lab is investigating the perceptual and mechanical basis of active touch perception, or haptics, and the development of new technologies for stimulating the sense of touch, allowing people to touch, feel, and interact with digital content as seamlessly as we do with objects in the real world. We study the scientific foundations of haptic perception and action, and the neuroscientific and biomechanical basis of touch, with a long-term goal of uncovering the fundamental perceptual and mechanical computations that enable haptic interaction. We also create new technologies for rendering artificial touch sensations that simulate those that are experienced when interacting with real objects, inspired by new findings on haptic perception.

Testbed for Power-Performance Management of Enterprise Computing Systems

This computing testbed is used to validate techniques and algorithms aimed at managing the performance and power consumption of enterprise computing systems. The testbed comprises a rack of Dell 2950 and Dell 1950 PowerEdge servers, as well as assorted desktop machines, networked via a gigabit switch. Virtualization of this cluster is enabled by VMWare's ESX Server running the Linux RedHat kernel. It also comprises of a rack of ten Apple Xserve machines networked via a gigabit switch. These servers run the OS X Leopard operating systems and have access to a RAID with TBs of total disk capacity.

Electrical Engineering Faculty

Suryadevara Basavaiah, PhD *(University of Pennsylvania)*. Teaching Professor. Computer engineering; computer engineering education; custom circuit design; VLSI technology; process and silicon fabrication

Tom Chmielewski, PhD *(Drexel University)*. Assistant Teaching Professor. Modeling and simulation of electro-mechanical systems; optimal, adaptive and non-linear control; DC motor control; system identification; kalman filters (smoothing algorithms, tracking); image processing; robot design; biometric technology and design of embedded systems for control applications utilizing MATLAB and SIMULINK

Fernand Cohen, PhD *(Brown University)*. Professor. Surface modeling; tissue characterization and modeling; face modeling; recognition and tracking.

Andrew Cohen, PhD *(Rensselaer Polytechnic Institute)*. Associate Professor. Image processing; multi-target tracking; statistical pattern recognition and machine learning; algorithmic information theory; 5-D visualization

Kapil Dandekar, PhD *(University of Texas-Austin) Director of the Drexel Wireless Systems Laboratory (DWSL); Associate Dean of Research, College of Engineering*. Professor. Cellular/mobile communications and wireless LAN; smart antenna/MIMO for wireless communications; applied computational electromagnetics; microwave antenna and receiver development; free space optical communication; ultrasonic communication; sensor networks for homeland security; ultrawideband communication.

Afshin Daryoush, ScD *(Drexel University)*. Professor. Digital and microwave photonics; nonlinear microwave circuits; RFIC; medical imaging.

Bruce A. Eisenstein, PhD *(University of Pennsylvania) Vice Dean, College of Engineering; Arthur J. Rowland Professor*. Professor. Pattern recognition; estimation; decision theory.

Adam K. Fontecchio, PhD *(Brown University) Vice Dean, Graduate College*. Professor. Electro-optics; remote sensing; active optical elements; liquid crystal devices.

Gary Friedman, PhD *(University of Maryland-College Park)*. Professor. Biological and biomedical applications of nanoscale magnetic systems.

Eli Fromm, PhD *(Jefferson Medical College) LeRoy A. Brothers University Professor / Director for Center of Educational Research*. Professor. Engineering education; academic research policy; bioinstrumentation; physiologic systems.

Edwin L. Gerber, PhD *(University of Pennsylvania)*. Professor. Computerized instruments and measurements; undergraduate engineering education.

Allon Guez, PhD *(University of Florida)*. Professor. Intelligent control systems; robotics, biomedical, automation and manufacturing; business systems engineering.

Peter R. Herczfeld, PhD *(University of Minnesota) Lester A. Kraus Professor/Director, Center for Microwave/Lightwave Engineering*. Professor. Lightwave technology; microwaves; millimeter waves; fiberoptic and integrated optic devices.

Leonid Hrebien, PhD *(Drexel University)*. Professor. Tissue excitability; acceleration effects on physiology; bioinformatics.

Nagarajan Kandasamy, PhD *(University of Michigan) Associate Department Head for Graduate Affairs*. Associate Professor. Embedded systems, self-managing systems, reliable and fault-tolerant computing, distributed systems, computer architecture, and testing and verification of digital systems.

Bruce Katz, PhD *(University of Illinois)*. Adjunct Professor. Speech communication and computer science; artificial intelligence.

Youngmoo Kim, PhD *(MIT)*. Associate Professor. Audio and music signal processing, voice analysis and synthesis, music information retrieval, machine learning.

Timothy P. Kurzweg, PhD *(University of Pittsburgh)*. Associate Professor. Micro-optical systems; optical spectroscopy; programmable imaging with MEMS; bio-sensors; diffuse optical communication; MEMS fabrication; diffractive optics; optical automation; optical modeling and simulation; magnetic particle locomotion; meta-materials; reconfigurable antennas

John Lacontora, PhD *(New Jersey Institute of Technology)*. Associate Research Professor. Service engineering; industrial engineering.

Karen Miu, PhD *(Cornell University)*. Professor. Power systems; distribution networks; distribution automation; optimization; system analysis.

Bahram Nabet, PhD *(University of Washington) Associate Dean for Special Projects, College of Engineering; Electrical and Computer Engineering*. Professor. Optoelectronics; fabrication and modeling; fiber optic devices; nanoelectronics; nanowires.

Prawat Nagvajara, Ph.D. *(Boston University)*. Associate Professor. System on a chip; embedded systems; power grid computation; testing of computer hardware; fault-tolerant computing; VLSI systems; error control coding.

Dagmar Niebur, PhD *(Swiss Federal Institute of Technology)*. Associate Professor. Intelligent systems; dynamical systems; power system monitoring and control.

Chika Nwankpa, PhD *(Illinois Institute of Technology) ECE Department Head*. Professor. Power system dynamics; power electronic switching systems; optically controlled high power switches.

Christopher Peters, PhD *(University of Michigan)*. Teaching Professor. Nuclear reactor design; ionizing radiation detection; nuclear forensics; power plant reliability and risk analysis; naval/marine power and propulsion; directed energy/high power microwaves; nonstationary signal processing; radar; electronic survivability/susceptibility to harsh environments; electronic warfare

Karkal S. Prahbu, PhD *(Harvard University)*. Auxiliary Professor. Computer and software engineering; advanced microprocessors and distributed operating systems.

William C. Regli, PhD *(University of Maryland-College Park)*. Professor. Artificial intelligence; computer graphics; engineering design and Internet computing.

Gail L. Rosen, PhD *(Georgia Institute of Technology)*. Associate Professor. Signal processing, signal processing for biological analysis and modeling, bio-inspired designs, source localization and tracking.

Ionnis Savidis, PhD *(University of Rochester)*. Assistant Professor. Analysis, modeling, and design methodologies for high performance digital and mixed-signal integrated circuits; Emerging integrated circuit technologies; Electrical and thermal modeling and characterization, signal and power integrity, and power and clock delivery for 3-D IC technologies

Kevin J. Scoles, PhD *(Dartmouth College)*. Associate Professor. Microelectronics; electric vehicles; solar energy; biomedical electronics.

Harish Sethu, PhD *(Lehigh University)*. Associate Professor. Protocols, architectures and algorithms in computer networks; computer security; mobile ad hoc networks; large-scale complex adaptive networks and systems.

James Shackleford, PhD *(Drexel University)*. Assistant Professor. Medical image processing, high performance computing, embedded systems, computer vision, machine learning

P. Mohana Shankar, PhD *(Indian Institute of Technology) Allen Rothwarf Professor of Electrical and Computer Engineering*. Professor. Wireless communications; biomedical ultrasonics; fiberoptic bio-sensors.

Jonathan E. Spanier, PhD *(Columbia University) Associate Dean, Strategic Planning, College of Engineering*. Professor. Light-matter interactions in electronic materials, including ferroelectric semiconductors, complex oxide thin film science; laster spectroscopy, including Raman scattering.

Matthew Stamm, PhD *(University of Maryland, College Park)*. Assistant Professor. Information Security; multimedia forensics and anti-forensics; information verification; adversarial dynamics; signal processing

Jaudelice Cavalcante de Oliveira, PhD *(Georgia Institute of Technology)*. Associate Professor. Software-defined networking; social and economic networks; network security; design and analysis of protocols, algorithms and architectures in computer networks, particularly solutions for the Internet of Things

Master of Engineering

Major: Engineering
Degree Awarded: Master of Engineering (ME)
Calendar Type: Quarter
Minimum Required Credits: 48.0
Co-op Option: None
Classification of Instructional Programs (CIP) code: 14.0101
Standard Occupational Classification (SOC) code: 17.2199

About the Program

Note: This program is not accepting external applicants at this time.

This ME program is a highly customizable program primarily used for international and visiting students studying engineering at Drexel whose plan of study must be customized. This program may be offered by any department and will be reviewed by the department Advisor to make certain the plan of study meets degree requirements.

The ME program offers wide flexibility for those students who wish to combine technical and nontechnical study with hands-on experience in industry and laboratory research. This degree program may not be the best choice for those who wish to earn a PhD in Engineering.

Admission Requirements

This program allows for maximum flexibility for international visiting students and students on study abroad. In addition to meeting requirements for graduate admission, which include at least a 3.0 GPA for the last two years of undergraduate study and for any graduate study, applicants must hold a bachelor's degree in engineering from an accredited institution or an equivalent. Students whose background is in science or mathematics may be accepted to the program, but they will be required to take undergraduate engineering courses.

Although the Graduate Record Examination (GRE) is not required for admission, it may be required of students interested in a teaching or research assistantship. Applicants whose native language is not English and who do not have previous degrees from a U.S. institution are required to submit scores of at least 550 on the Test of English as a Foreign Language (TOEFL).

Degree Requirements

Students take a series of core and elective courses. Students work closely with and advisor to develop an individualized plan of study. This is a highly customizable degree program and may include a mix of courses, Co-op, research and thesis. The average time required to complete the master’s degree is two years of full-time study or three years of part-time study. This is primarily used for visiting students.

The degree requires a total of 48.0 credits, including at least 18.0 credits from an engineering discipline core. This core may be from any engineering department: Civil and Architectural, Chemical, Electrical and Computer, Materials, or Mechanical Engineering and Mechanics. (Please refer to the appropriate departmental description in this catalog for more information about each department.) The department Advisor will work closely with the student to develop an plan of study that meets the program requirements.

Engineering Management MS

Major: Engineering Management
Degree Awarded: Master of Science (MS)
Calendar Type: Quarter
Minimum Required Credts: 45.0
Co-op Option: Available for full-time, on-campus master's-level students
Classification of Instructional Programs (CIP) code: 15.1501
Standard Occupational Classification (SOC) code: 11-9041

About the Program

In our increasingly complex, technologically oriented economy, demand has risen for professionals with the expertise to manage both human and technological resources; a combination of talents crucial to organizations competing in the global marketplace. Students graduating with the master's in engineering management are significantly better positioned to meet the challenge. Drexel's Engineering Management graduate degree provides students with leadership skills, preparing them for career progression across a wide domain of industries in technology-based units or organizations around the world, helping them to advance into roles as project/lead engineer, functional manager, director, program manager, plant manager and even up to CEO.

The nationally ranked Engineering Management Program (http://www.drexel.edu/egmt/) is designed to provide the background in management science necessary to advance from purely technical positions to supervisory responsibilities in such areas as research and development, production, engineering, design and technical marketing. Study can be on a part-time or full-time basis, and courses are available both online and face to face. The program is also certified by the American Society for Engineering management (ASEM). Students that complete the program will also earn either a Certified Associate in Engineering Management (CAEM) or a Certified Professional Engineering Management (CPEM) Certificate from the ASEM society. Drexel is one of a few universities nationwide to have this distinction with ASEM (https://asem.org/Graduate-Program-Cert/).

Engineering management is a multidisciplinary program offering a core curriculum and specialization in a selected area of technology or management. Majors in engineering management should hold a bachelor’s degree in engineering, basic science or a related field. The program is open to those professionals who aspire to be engineering or technically based managers.

Certificate in Engineering Management

In addition to the master's program, the college offers a five-course Graduate Certificate in Engineering Management (p. 96). Students can obtain this credential and apply the credits to subsequently continue study toward completion of a master's in engineering management.

Some graduate degree programs in other disciplines within the College of Engineering also allow for students to earn an engineering management certificate simultaneously (https://drexel.edu/engineering/academics/graduate-programs/engineer-leadership/). If interested, contact your program advisor for approval.

Additional Information

For more information about the program, visit the Engineering Management (https://drexel.edu/engineering/academics/graduate-programs/masters/engineering-management/) program page.

Admission Requirements

Admission to this program requires:

- A four-year bachelor of science degree in engineering from an ABET-accredited institution in the United States or an equivalent international institution. Bachelor's degrees in math or the physical sciences may also be considered for admission.
- Minimum cumulative undergraduate GPA of 3.0. If any other graduate work has been completed, the average GPA must be at least 3.0.

- Complete graduate school application.
- Official transcripts from all universities or colleges and other post-secondary educational institutions (including trade schools) attended.
- Two letters of recommendation, professional or academic (at least one professional).
- Resume
- A personal statement explaining why you wish to earn the degree and why you are prepared to succeed.
- International students must submit an Internet-based TOEFL (IBT = score of 94 or higher).

At least three years of relevant professional work experience are recommended but not required.

Interested students should complete the Drexel University Online admission application (http://online.drexel.edu/online-degrees/engineering-degrees/ms-egmt/#admissionscriteria) for admission into this online program.

Note, interested students can apply for admission to this program in any term (Fall, Winter, Spring and Summer) as there is rolling admission throughout the year. However, students attending full time cannot apply for admission in the summer term. Full time students can apply for all other terms (Fall, Winter and Spring). This summer term restriction does not apply to part time / online students. These students can apply for admission in any term (Fall, Winter, Spring and Summer)

Degree Requirements

Students may take their required elective credits from any graduate-level course(s) in engineering, business, or another college for which they have adequate preparation and can obtain approvals from the college and the engineering management program.

All candidates are encouraged to discuss areas of interest with the program advisor and to develop a proposed plan of study during the early stages of the program.

Note: Specific course requirements may be waived for students who have taken equivalent courses elsewhere.

Core Courses		
Engineering Management Leadership		
EGMT 501	Leading and Managing Technical Workers	3.0
EGMT 502	Analysis and Decision Methods for Technical Managers	3.0
EGMT 504	Design Thinking for Engineering Communications	3.0
EGMT 581	Meeting Engineering Leadership Challenges	3.0
Quantitative Analysis		
EGMT 571	Engineering Statistics	3.0
EGMT 572	Statistical Data Analysis *	3.0
EGMT 573	Operations Research	3.0
Economics and Financial Management		
EGMT 531	Engineering Economic Evaluation & Analysis	3.0
EGMT 535	Financial Management	3.0
Engineering Management Capstone		
EGMT 692	Engineering Management Capstone	3.0
Electives		
Select five of the following electives: **		15.0
Marketing & Business Development Electives		
EGMT 614	Marketing: Identifying Customer Needs	
EGMT 615	New Product Conceptualization, Justification, and Implementation	
EGMT 616	Value Creation through New Product Development	
EGMT 618	Intrapreneurship for Engineers	
EGMT 660	Sustainable Business Practices for Engineers	
Project Management Electives		
EGMT 620	Engineering Project Management	
EGMT 625	Project Planning, Scheduling and Control	
EGMT 630	Global Engineering Project Management	
Systems Engineering & Systems Thinking Electives		
EGMT 635	Visual System Mapping	
EGMT 650	Systems Thinking for Leaders	
SYSE 685	Systems Engineering Management	
SYSE 688	Systems Engineering Analysis	
SYSE 690	Modeling, Simulation and Other Tools	
Engineering Quality, Law & Ethics Electives		
EGMT 575	Quality Systems Engineering	
EGMT 610	Ethics & Business Practices for Engineers	
EGMT 652	Engineering Law	
Other Approved Electives		
EGMT 645	Managing Engineering Disasters	
SYSE 520	Global Sustainment and Integrated Logistics	
SYSE 521	Integrated Risk Management	
SYSE 522	Engineering Supply Chain Systems	
SYSE 523	Systems Reliability Engineering	
SYSE 524	Systems Reliability, Availability & Maintainability Analysis	
SYSE 525	Statistical Modeling & Experimental Design	
SYSE 530	Systems Engineering Design	
SYSE 531	Systems Architecture Development	
SYSE 532	Software Systems Engineering	
SYSE 533	Systems Integration and Test	
SYSE 650	Transition of the Integrated System from Design to Production	
Optional Co-op Experience ***		**0-1**
COOP 500	Career Management and Professional Development for Master's Degree Students	
Total Credits		**45.0-46.0**

*****

EGMT 572 requires EGMT 571 as a prerequisite or a waiver must be approved by the program administration to take then pass the STAT Placement Exam in place of EGMT 571. If approved for the waiver of EGMT 571, students will be eligible to complete an upper level course substitution to satisfy the degree requirements.

******

Students may select electives from other disciplines outside of Engineering Management with prior approval from their advisor.

****

Co-op is an option for this degree for full-time on-campus students.
To prepare for the 6-month co-op experience, students will complete: COOP 500. The total credits required for this degree with the co-op experience is 46.0
Students not participating in the co-op experience will need 45.0 credits to graduate.

Sample Plan of Study

Part Time, Two Courses Per Term

First Year (Part-Time)

Fall	Credits	Winter	Credits	Spring	Credits	Summer	Credits
EGMT 501	3.0	EGMT 502	3.0	EGMT 531	3.0	EGMT 504	3.0
EGMT 571	3.0	EGMT 572	3.0	EGMT 573	3.0	EGMT 535	3.0
	6		**6**		**6**		**6**

Second Year (Part-Time)

Fall	Credits	Winter	Credits	Spring	Credits	Summer	Credits
EGMT 581	3.0	Electives	6.0	EGMT 692	3.0	Elective*	3.0
Elective	3.0			Elective	3.0		
	6		**6**		**6**		**3**

Total Credits 45

*****

Note: Second Year Summer is less than the 4.5-credit minimum required (considered half-time status) of graduate programs to be considered financial aid eligible. As a result, aid will not be disbursed to students this term.

Part Time, One Course Per Term*

First Year (Part-Time)

Fall	Credits	Winter	Credits	Spring	Credits	Summer	Credits
EGMT 501	3.0	EGMT 502	3.0	EGMT 531	3.0	EGMT 535	3.0

Program Level Outcomes

- Lead complex engineering and capital intensive organizations with globally dispersed organizational structures.
- Solve industry-related problems by applying their knowledge of business, mathematics, science and engineering.
- Develop leadership skills that can be applied effectively in technology-based organizations.
- Interpret quantitative and subjective data to make sound engineering and managerial decisions.
- Apply data analytics and decision tools to solve complex technical and operational problems to meet both business and customer needs.
- Develop and lead effective teams and projects.
- Communicate effectively across the entire enterprise.
- Understand the ethical responsibilities of practicing engineering leaders and the impact of their decisions within a global and societal context.

Engineering Management Faculty

James Breen, MBA, PE *(Drexel University)*. Adjunct Instructor. Vice President of Manufacturing Network Strategy at Johnson & Johnson.

James C. Deiner, MBA *(Cornell University)*. Adjunct Instructor. IT projects in the pharmaceutical, logistics and financial services industries.

James Lill, MS, PE *(Drexel University)*. Adjunct Instructor. Director of Facilities, Planning and Management for the Downingtown Area School District.

Carole Mablekos, PhD *(Purdue University)*. Adjunct Instructor. Public speaking, technical writing, organizational behavior, and business writing courses.

Miray Pereira, MBA *(Rutgers University)*. Adjunct Instructor. Manages a team of consultants responsible for development, facilitation and implementation of fundamental demand management systems and capabilities for DuPont, most recently with the DuPont Safety & Protection Platform in strategic planning, mergers & acquisitions.

Fredric Plotnick, PhD, JD, PE *(Drexel University; Widener University)*. Adjunct Professor. CEO and principal consultant of Engineering & Property Management Consultants, Inc.

Stephen Smith, PhD *(Drexel University)*. Associate Teaching Professor. Development of online learning and distance teaching/learning techniques for engineering.

Walter Sobkiw, BS *(Drexel University)*. Adjunct Faculty. Author of "Systems Engineering Design Renaissance" and "Systems Practices as Common Sense."

Fernando Tovia, PhD *(University of Arkansas)*. Adjunct Instructor. Core quantitative analysis,strategic planning, supply chain management and manufacturing systems.

John Via, DEngr *(Southern Methodist University) Director of Engineering Management; Associate Dean for Online Programs*. Teaching Professor.

Engineering Technology MSET

Major: Engineering Technology
Degree Awarded: Master of Science in Engineering Technology (MSET)
Calendar Type: Quarter
Minimum Required Credits: 45.0
Co-op Option: None
Classification of Instructional Programs (CIP) code: 14.4101
Standard Occupational Classification (SOC) code: 17-3029

About the Program

Effective May 15, 2020, new students are no longer being accepted into this program, however similar options are available. Contact us **(**https://drexel.edu/engineering/admissions/graduate/contact-us/**) for more information.**

Engineering Technology provides a broad grasp of technologies, tools, and processes that are critical to a modern industrial workplace. The discipline emphasizes application over theory, and it is designed for individuals who want marketable and immediately applicable skills for technology-intensive organizations.

The discipline of Engineering Technology is closely aligned with Engineering Management, as both degrees develop advanced-level practitioners who are skilled in solving technical and organizational problems through the application of engineering principles and technology. The MSET curriculum provides technical expertise, and Engineering Management provides business and leadership skills that technical workers need to compete successfully in the global marketplace. Engineering Management prepares professionals for supervisory responsibilities in areas such as research and development, production, engineering design, and technical marketing. The MSET program allows students to gain a deep understanding of both the technical and business concerns of an organization, leading to advanced positions in leadership.

Program Goals

Graduates of the Master of Science in Engineering Technology will be expected to:

- Apply scientific and technological concepts to solving technological problems
- Apply concepts and skills developed in a variety of technical and professional disciplines, including computer applications and networking, materials properties and production processes, and quality control to improve production processes and techniques
- Plan, facilitate, and integrate technology and problem-solving techniques in the leadership functions of the industrial enterprise system
- Engage in applied technical research that will add to the knowledge of the discipline and solve problems in an industrial environment
- Develop the communication skills required for technical managers

Additional Information

For more information, view the College of Engineering's home for Engineering Technology in the Department of Engineering, Leadership and Society (https://drexel.edu/engineering/academics/departments/engineering-leadership-society/).

Admission Requirements

Applicants must have a 3.0 grade point average in their undergraduate or upper division (junior and senior year) coursework.

International students who have their undergraduate degree from a country whose language is not English can be admitted with a Test of English as a Foreign Language (TOEFL) test score of 550 or better. For more information regarding international applicant requirements, view the International Students Admissions Information (http://drexel.edu/grad/resources/international/) page.

Prerequisite courses

The following prerequisite courses must be completed at the undergraduate level with a minimum grade of C:

- Calculus I
- Calculus II
- Physics I (can be algebra based)
- Physics II (can be algebra based)
- AC/DC Circuit Analysis
- Digital Electronics
- Chemistry I or Materials
- Business Statistics

Additional Information

Visit the Graduate Admissions (https://drexel.edu/grad/programs/coe/) website for more information about requirements and deadlines, as well as instructions for applying online.

Degree Requirements

Candidates for the MS in Engineering Technology must complete a minimum of 45.0 quarter credits. A minimum grade of B is required in all core courses and no more than two C grades in electives.

Of the 45.0 quarter credits required for the degree, 30.0 must be earned at Drexel University, including 24.0 credits of Engineering Technology (ET) courses. A maximum of 15.0 transfer credits may be allowed for graduate courses taken at other institutions if they are appropriate to the student's plan of study.

Core Courses		
EGMT 571	Engineering Statistics	3.0
EGMT 610	Ethics & Business Practices for Engineers	3.0
ET 610	Networks for Industrial Environments	3.0
ET 615	Rapid Prototyping and Product Design	3.0
ET 619	Programmable Devices and Systems	3.0
ET 620	Microsystems and Microfabrication	3.0
ET 681	Nanomaterials and Nanoengineering	3.0
ET 725	Sensors and Measurement Systems	3.0
ET 732	Modern Energy Conversion Technologies	3.0
Electives		**9.0**
Select three of the following:		
EGMT 572	Statistical Data Analysis	
ET 605	Materials for Emerging Technologies	
ET 635	Engineering Quality Methods	
ET 675	Reliability Engineering	
ET 685	Precision Manufacturing	
ET 730	Lean Manufacturing Principles	
ET 733	Renewable Energy Technology	

ET 755	Sustainable and Green Manufacturing	
PROJ 501	Introduction to Project Management	
SYSE 685	Systems Engineering Management	
Capstone Course		**9.0**
ET 775	Master's Project and Thesis in Engineering Technology *	
Total Credits		**45.0**

*

This is a three (3) credit course that is repeated three (3) times.

Program Level Outcomes

Upon completion of the program, graduates will be prepared to:

- Use the knowledge, skills, and tools, including a knowledge of mathematics, science and engineering, to identify and solve a broad range of engineering technology problems
- Design and conduct experiments and measurements, to analyze and interpret data and to apply experimental results to improve systems, components, or processes
- Design systems, components, and processes to meet requirements within realistic constraints
- Function effectively as a member or leader on a technical team
- Communicate effectively with both technical and non-technical audiences
- Recognize the need for, and an ability to engage in life-long learning
- Have an understanding of professional and ethical responsibility and the impact of engineering technology solutions in a societal and global context
- Have a commitment to quality, timeliness, and continuous improvement

Engineering Technology Faculty

M. Eric Carr, MsCpE *(Drexel University)*. Instructor. Computer Engineering, Digital Design, Programmable Devices, Genetic Algorithms, Programming, Additive Manufacturing, Maker Movement.

Richard Chiou, PhD *(Georgia Institute of Technology)*. Associate Professor. Green manufacturing, mechatronics, Internet-based robotics and automation, and remote sensors and monitoring.

Yalcin Ertekin, PhD *(University of Missouri-Rolla)*. Associate Clinical Professor. High speed machining with micromachining applications, machining process optimization and condition monitoring using multiple sensors, FEA simulation with 3D solid modeling applications, rapid prototyping and reverse engineering, quality and reliability improvement through statistically designed experiments, neural networks and data mining and Taguchi methods, CNC machine tool calibration characterization of cold fastening, clinching and self-pierced riveting processes, non-invasive surgical tool design, student learning enhancement using online simulation tools.

Vladimir Genis, PhD *(Kiev State University, Ukraine) Department Head, Engineering Technology*. Professor. Ultrasound wave propagation and scattering, ultrasound imaging, electronic instrumentation, piezoelectric transducers, and engineering education. Designed and developed diagnostic and therapeutic equipment for medical applications and electronic systems and techniques for defense-related and industrial applications.

Irina Ciobanescu Husanu, PhD *(Drexel University)*. Assistant Clinical Professor. Microgravity combustion, thermal-fluid science with applications in micro-combustion, fuel cells and research of alternative and green fuels, energy conversion and renewable energy, industrial experience in aerospace engineering areas (theoretical analysis, numerical simulations and experimental investigations), design and testing of propulsion systems, mechanical instrumentation, and developing industrial applications of aircraft engines.

Lunal Khuon, PhD *(Massachusetts Institute of Technology)*. Clinical Associate Professor. Radio frequency, analog, and biomedical integrated circuits, biomedical instrumentation, neural interfaces, wireless systems, and engineering education. Research topics include area-efficient and power-efficient integrated circuits, plasmonics, adiabatic circuits, rotary clocks, and medical cyber-physical systems.

Michael Mauk, PhD, PE *(University of Delaware)*. Assistant Clinical Professor. Rapid prototyping, microfluidics, alternative energy including solar energy and photovoltaics, semiconductor materials science, nanotechnology.

Environmental Engineering MSENE

Major: Environmental Engineering
Degree Awarded: Master of Science in Environmental Engineering (MSENE)
Calendar Type: Quarter
Minimum Required Credits: 45.0
Co-op Option: None
Classification of Instructional Programs (CIP) code: 14.1401
Standard Occupational Classification (SOC) code: 17-2081

About the Program

Environmental Engineering is concerned with protecting human, animal and plant populations from the effects of adverse environmental factors, including toxic chemicals and wastes, pathogenic bacteria and global warming. Environmental Engineering MS graduates may include students with expertise in one or more of the following sub-disciplines:

- air pollution,
- hazardous and solid waste,
- subsurface contaminant hydrology,
- water resources,
- water and wastewater, and
- sustainability treatment

Environmental engineers also try to minimize the effect of human activities on the physical and living environment so society can live more healthy and sustainable lives. This field builds on other branches of engineering, especially civil, chemical and mechanical engineering. It also builds on information from many of the sciences, such as chemistry, physics, hydrology, geology, atmospheric science and several specializations of biology (ecology, microbiology) and public health. Students who elect to study environmental engineering will become familiar with many of these areas because maintaining and improving the environment requires that problems be evaluated and solutions found using a multidisciplinary approach.

Additional Information

For more information, visit the MS in Environmental Engineering (https://drexel.edu/engineering/academics/graduate-programs/masters/

environmental-engineering/) program or the Department of Civil, Architectural and Environmental Engineering (https://drexel.edu/engineering/academics/departments/civil-architectural-environmental-engineering/) webpage.

Admission Requirements

Applicants to the MS in Environmental Engineering must have a minimum of a Bachelor of Science degree. The application package will include:

- undergraduate and graduate transcripts
- three letters of recommendation from faculty or professionals who can evaluate the applicant's promise as a graduate student
- GRE scores (optional)
- a written statement of career and educational goals.

Competitive applicants will possess an undergraduate GPA of 3.30 or higher and GRE scores above the 60th percentile.

For additional information on how to apply, visit Drexel's Admissions page for Environmental Engineering (https://drexel.edu/academics/grad-professional-programs/engineering/environmental-engineering/). (https://drexel.edu/academics/grad-professional-programs/engineering/environmental-engineering/)

Degree Requirements

The MS in Environmental Engineering program requires 45.0 credits of coursework. Both a theses and a non-thesis option are available. It is possible to finish the MS degree on either a part-time or full-basis. The degree consists of a set of core courses, a sequence in one of several areas of emphasis (treatment process, human risks, water resources, environmental modeling, and air quality) and completion of cognate and elective sequences. After the first term of study, a detailed plan of study is developed with the student's graduate advisor.

Students entering the program without an ABET accredited BS degree in engineering will be required to take additional undergraduate coursework depending on their background and their career objectives.

Core Courses (15.0 credits)		
ENVE 660	Chemical Kinetics in Environmental Engineering	3.0
ENVS 501	Chemistry of the Environment	3.0
Approved Statistics course		**3.0-4.0**
BMES 510	Biomedical Statistics	
or ENVE 750	Data-based Engineering Modeling	
or ENVS 506	Biostatistics	
Approved Policy course		**3.0**
CIVE 564	Sustainable Water Resource Engineering	
or ECON 619	Public Finance and Cost Benefit Analysis	
or PLCY 503	Theory and Practice of Policy Analysis	
or PLCY 504	Methods of Policy Analysis	
Approved Life Sciences course		**3.0**
ENVE 516	Fundamentals of Environmental Biotechnology	
or ENVS 511	Evolutionary Ecology	
or ENVS 530	Aquatic Ecology	
Specialization Courses (select one area to complete) *		**9.0-12.0**
Environmental Treatment Processes		
ENVE 546 & ENVE 661 & ENVE 662 & ENVE 665	Solid Waste Systems and Env Engr Op-Chem & Phys and Enviro Engr Unit Oper-Bio and Hazardous Waste & Groundwater Treatment	
Human Risks		
AE 550	Indoor Air Quality **	
or EOH 612	Environmental Exposure Science	
EOH 510	Principles and Practice of Environmental and Occupational Health	
ENVE 727	Risk Assessment	
Water Resources		
CIVE 564 & CIVE 565 & ENVE 571	Sustainable Water Resource Engineering and Urban Ecohydraulics and Environmental Life Cycle Assessment	
CIVE 664	Open Channel Hydraulics **	
or ENVE 681	Analytical and Numerical Techniques in Hydrology	
Environmental Modeling		
ENVE 555	Geographic Information Systems **	
or ENVE 571	Environmental Life Cycle Assessment	
ENVE 681 & ENVE 750	Analytical and Numerical Techniques in Hydrology and Data-based Engineering Modeling	
Approved Advanced Math course:		
MEM 591	Applied Engr Analy Methods I	
or CHE 502	Mathematical Methods in Chemical Engineering	
or MATE 531	Numerical Engineering Methods	
Air Quality		
AE 550 & EOH 510 & ENVE 560	Indoor Air Quality and Principles and Practice of Environmental and Occupational Health and Fundamentals of Air Pollution Control	
Cognate Discipline Track ***		**12.0**
Electives or Thesis		**9.0-6.0**
Total Credits		**45.0-46.0**

*****

Students must take 4 courses in an approved specialization, such as environmental treatment processes, human risks, water resources, environmental modeling, or air quality.

******

One of these is required.

****

Students must complete a course sequence of 12.0 credits aside from their specialization. This might include a second specialization course sequence or a sequence of elective courses as approved by the student's advisor and the departmental graduate advisor in any of the following subjects: AE, CHE, CHEC, CHEM, CIVE, ENVE, ENSS, ENVP, ENVS, MATH, MEM (500-699).

Sample Plan of Study

First Year

Fall	Credits	Winter	Credits	Spring	Credits	Summer	Credits
ENVS 501	3.0	ENVE 660	3.0	Cognate Discipline course	3.0	VACATION	
Cognate Discipline course	3.0	Cognate Discipline course	3.0	Life Science course	3.0		
Statistics course	3.0	Environmental Policy course	3.0	Specialization Track course	3.0		
	9		**9**		**9**		**0**

Second Year

Fall	Credits	Winter	Credits
Cognate Discipline course	3.0	Elective or Thesis courses	6.0

Specialization Track courses	6.0	Specialization Track course	3.0
	9		**9**

Total Credits 45

Facilities

The Department of Civil, Architectural, and Environmental Engineering is well equipped with state-of-the-art facilities:

- Analytical instrumentation for measuring biological and chemical contaminants in air, water and land
- Field sampling equipment for water and air measurements
- Molecular biology capability
- Computational facilities including access to multi-processor clusters, and advanced simulation and data analysis software

Civil, Architectural and Environmental Engineering Faculty

Abieyuwa Aghayere, PhD *(University of Alberta)*. Professor. Structural design - concrete, steel and wood; structural failure analysis; retrofitting of existing structures; new structural systems and materials; engineering education.

A. Emin Aktan, PhD *(University of Illinois at Urbana-Champaign) John Roebling Professor of Infrastructure Studies*. Professor. Structural engineering; health monitoring of large infrastructure systems; infrastructure evaluation; intelligent systems.

Ivan Bartoli, PhD *(University of California, San Diego)*. Associate Professor. Non-destructive evaluation and structural health monitoring; dynamic identification, stress wave propagation modeling.

Robert Brehm, PhD *(Drexel University)*. Associate Teaching Professor. International infrastructure delivery; response to natural catastrophes; risk assessment and mitigation strategies; project management techniques.

S.C. Jonathan Cheng, PhD *(West Virginia University)*. Associate Professor. Soil mechanics; geosynthetics; probabilistic design; landfill containments; engineering education.

Peter DeCarlo, PhD *(University of Colorado)*. Assistant Professor. Outdoor air quality, particulate matter size and composition instrumentation and measurements, source apportionment of ambient particulate matter, climate impacts of particulate matter.

Eugenia Ellis, RA, PhD *(Virginia Polytechnic State University)*. Associate Professor. Extended-care facilities design, research on spatial visualization, perception and imagination.

Patricia Gallagher, PhD *(Virginia Polytechnic Institute)*. Associate Professor. Soil mechanics; geoenvironmental; ground improvement; sustainability.

Patrick Gurian, PhD *(Carnegie-Mellon University)*. Associate Professor. Risk analysis of environmental and infrastructure systems; novel adsorbent materials; environmental standard setting; Bayesian statistical modeling; community outreach and environmental health.

Charles N. Haas, PhD *(University of Illinois-Urbana) L. D. Betz Professor and Department Head, Civil, Architectural and Environmental Engineering*. Professor. Control of human exposures to and risk assessment of pathogenic organisms; water and waste treatment; homeland security.

Ahmad Hamid, PhD *(McMaster University)*. Professor. Engineered masonry; seismic behavior, design and retrofit of masonry structures; development of new materials and building systems.

Y. Grace Hsuan, PhD *(Imperial College)*. Professor. Durability of polymeric construction materials; advanced construction materials; and performance of geosynthetics.

Joseph B. Hughes, PhD *(University of Iowa) Dean of the College of Engineering and Distinguished Professor*. Biological processes and applications of nanotechnology in environmental systems.

L. James Lo, PhD *(University of Texas at Austin)*. Assistant Professor. Computational Fluid Dynamics (CFD) and airflow simulation; Indoor Environmental Quality; Building control integration with building information management systems.

Roger Marino, PhD *(Drexel University)*. Associate Teaching Professor. Fluid mechanics; water resources; engineering education; land development.

Joseph P. Martin, PhD *(Colorado State University)*. Professor. Geotechnical and geoenvironmental engineering; hydrology; transportation; waste management.

James E. Mitchell, MArch *(University of Pennsylvania) Associate Dean for Undergraduate Affairs*. Professor. Architectural engineering design; building systems; engineering education.

Franco Montalto, PhD *(Cornell University)*. Associate Professor. Effects of built infrastructure on societal water needs, ecohydrologic patterns and processes, ecological restoration, green design, water interventions.

Joseph V. Mullin, PhD *(Pennsylvania State University) Associate Department Head*. Teaching Professor. Structural engineering; failure analysis; experimental stress analysis; construction materials; marine structures.

Mira S. Olson, PhD *(University of Virginia) Graduate Studies Advisor*. Associate Professor. Environmental remediation; contaminant and bacterial transport in porous media and bacterial response to dynamic environments.

Michael Ryan, PhD *(Drexel University)*. Assistant Teaching Professor. Microbial Source Tracking (MST); Quantitative Microbial Risk Assessment (QMRA); Dynamic Engineering Systems Modeling; Molecular Microbial Biology; Environmental Statistics; Engineering Economics; Microbiology

Christopher Sales, PhD *(University of California, Berkeley)*. Assistant Professor. Environmental microbiology and biotechnology; biodegradation of environmental contaminants; microbial processes for energy and resource recovery from waste.

Yared Shifferaw, PhD *(Johns Hopkins University)*. Assistant Professor. Computational and experimental mechanics; structural stability; optimization; health monitoring and hazard mitigation; sustainable structures; emerging materials; thin-walled structures and metallic structures.

Kurt Sjoblom, PhD *(Massachusetts Institute of Technology)*. Assistant Professor. Laboratory testing of geomaterials, geotechnical engineering, foundation engineering.

Sabrina Spatari, PhD *(University of Toronto)*. Associate Professor. Research in industrial ecology; development and application of life cycle assessment (LCA) and material flow analysis (MFA) methods for guiding engineering and policy decisions; specific interest in biomass and bioenergy, biofuels, and urban infrastructure.

Robert Swan Associate Teaching Professor. Geotechnical and Geosynthetic Engineering; soil/geosynthetic interaction and performance; laboratory and field geotechnical/geosynthetic testing.

Michael Waring, PhD *(University of Texas-Austin) Associate Department Head for Undergraduate Programs; Director of Architectural Engineering Program*. Associate Professor. Indoor air quality and building sustainability; indoor particulate matter fate and transport; indoor chemistry and particle formation; secondary impacts of control technologies and strategies.

Jin Wen, PhD *(University of Iowa)*. Associate Professor. Architectural engineering; Building Energy Efficiency; Intelligent Building; Net-zero Building; and Indoor Air Quality.

Aspasia Zerva, PhD *(University of Illinois)*. Professor. Earthquake engineering; mechanics; seismology; structural reliability; system identification; advanced computational computational methods in structural analysis.

Emeritus Faculty

Harry G. Harris, PhD *(Cornell University)*. Professor Emeritus. Structural models; dynamics of structures, plates and shells; industrialized building construction.

Richard Weggel, PhD *(University of Illinois) Samuel S. Baxter Professor Emeritus; Civil and Environmental Engineering*. Professor Emeritus. Coastal engineering; hydraulics engineering; hydrology.

Richard Woodring, PhD *(University of Illinois) Dean of Engineering Emeritus*. Professor Emeritus. Structural engineering, reinforced concrete.

Environmental Engineering PhD

Major: Environmental Engineering
Degree Awarded: Doctor of Philosophy (PhD)
Calendar Type: Quarter
Minimum Required Credits: 90.0
Co-op Option: None
Classification of Instructional Programs (CIP) code: 14.1401
Standard Occupational Classification (SOC) code: 17-2081

About the Program

Environmental Engineering is concerned with protecting human, animal, and plant populations from the effects of adverse environmental factors, including toxic chemicals and wastes, pathogenic bacteria, and global warming. Environmental Engineering PhD graduates may include students with expertise in one or more of the following sub-disciplines:

- air pollution,
- hazardous and solid waste,
- subsurface contaminant hydrology,
- water resources,
- water and wastewater, and
- sustainability treatment

Environmental engineers also try to minimize the effect of human activities on the physical and living environment so that we can all live more healthy and sustainable lives. This field builds on other branches of engineering, especially civil, chemical, and mechanical engineering. It also builds on information from many of the sciences, such as chemistry, physics, hydrology, geology, atmospheric science, and several specializations of biology (ecology, microbiology) and public health. Students who elect to study environmental engineering will become familiar with many of these areas because maintaining and improving the environment requires that problems be evaluated and solutions found using a multidisciplinary approach.

Additional Information

For more information, visit the Department of Civil, Architectural and Environmental Engineering (https://drexel.edu/engineering/academics/departments/civil-architectural-environmental-engineering/) webpage.

Admission Requirements

Applicants to the PhD in Environmental Engineering must have a minimum of a Bachelor of Science degree. The application package will include:

- undergraduate and graduate transcripts
- three letters of recommendation from faculty or professionals who can evaluate the applicant's promise as a graduate student
- GRE scores (optional)
- a written statement of career and educational goals.

Competitive applicants will possess an undergraduate GPA of 3.30 or higher and GRE scores above the 60th percentile.

For additional information on how to apply, visit Drexel's Admissions page for Environmental Engineering (https://drexel.edu/academics/grad-professional-programs/engineering/environmental-engineering/). (https://drexel.edu/academics/grad-professional-programs/engineering/environmental-engineering/)

Degree Requirements

The following general requirements must be satisfied to complete the PhD in Environmental Engineering:

- Establishment of plan of study with PhD advisor
- Completion of 90.0 quarter credit hours (or 45 credit hours post-MS), including taking certain qualifying courses
- Passing of PhD candidacy exam
- Approval of PhD dissertation proposal
- Defense of PhD dissertation

Students entering the PhD program with an approved Master of Science (MS) degree must take 45 credit hours of coursework and research to be approved by their PhD advisor. Students entering the PhD program without an approved MS degree can either complete the 45-credit hour Master of Science in Environmental Engineering (MSENE) degree followed by an additional 45 credit hours post MSENE, or they can choose not to obtain the MSENE and complete only the required “core” courses for the PhD degree within the completion of a total of 90 required credit hours. Students with previous graduate coursework, may transfer no more than 15 quarter credits (equivalent to 12 semester credits) from approved institutions if deemed equivalent to courses offered within the department.

All PhD students are required to meet all milestones of the program. The total credit amount, candidacy exam, and dissertation are University Requirements. Additional requirements are determined by the department offering the degree.

Qualifying Courses

To satisfy the qualifying requirements, students must earn a grade of B+ or better in the five required “core” courses taken at Drexel and must earn an overall GPA of 3.5 or better in these courses.

Undergraduate courses, independent studies, research credits, and courses from other departments cannot be counted toward the qualifying requirements. Student progress toward these requirements will be assessed by the PhD advisor following the student's first year in the PhD program. For more information visit the Environmental Engineering's PhD Program Requirements page (https://drexel.edu/engineering/academics/graduate-programs/doctoral/environmental-engineering/).

Candidacy Exam

After approximately one year of study beyond the MS degree or completion of the required “core” courses, if their GPA is # 3.5, PhD students can and must take a candidacy examination, consisting of written and oral parts. Successful completion of the candidacy exam enables a student to progress from the designation of PhD student to PhD candidate. The candidacy exam represents the first exam in a series of three that comprise the PhD curriculum.

The Environmental Engineering candidacy examination serves to define the student’s research domain and to evaluate the student’s knowledge and understanding of various fundamental and foundational results in that domain. The student is expected to be able to read, understand, analyze, and explain advanced technical results in a specialized area of Environmental Engineering at an adequate level of detail. The candidacy examination will evaluate those abilities by asking a student to summarize literature and/or undertake a small research project. The student will prepare a written summary of review and/or project results, present the outcome orally, and answer questions about the report or presentation. The candidacy examination committee will evaluate the written report, the oral presentation, and the student’s answers. The candidacy committee membership must follow the requirements of the Office of Graduate Studies and must be approved by the Office of Graduate Studies.

Students with a GPA < 3.5 do not meet eligibility requirements to sit for the candidacy exam. In this case, a student may petition the Graduate Advisor to take a Preliminary Written Exam (PWE). A committee will be formed consisting of three members selected from the pool of faculty in the field of research interest of the student and the pool of faculty who taught the courses taken by the student during the preceding terms. An exam will be developed consisting of a series of questions/problems prepared by the three written exam committee members. The written exam, while fixed in duration, may be composed of several different problem-solving assignments. Additionally, the exam may be closed book or open book or a combination thereof. The student will consult with the advisor to become acquainted with the specific rules of the exam. The exam will be graded by the PWE Committee to determine if the student may sit for the candidacy exam.

Dissertation Proposal

After successfully completing the candidacy examination, the PhD candidate must prepare a dissertation proposal that outlines, in detail, the specific problems that will be solved during the research that is conducted to complete the PhD dissertation. The quality of the dissertation proposal should be at the level of a peer-reviewed proposal to a federal funding agency, or a publishable scientific paper. The candidate is responsible for sending the dissertation proposal to the PhD committee no less than two weeks before the scheduled oral presentation. The PhD committee membership need not be the same as the candidacy exam committee, but it follows the same requirements and must be approved by the Office of Graduate Studies. The oral presentation involves a presentation by the candidate followed by a period during which the committee will ask questions. The committee will then determine if the dissertation proposal has been accepted. The dissertation proposal can be repeated at most once if the proposal was not accepted.

A dissertation proposal must be approved within two years of becoming a PhD candidate. After approval of the dissertation proposal, the committee may meet to review the progress of the research.

Dissertation Defense

After successfully completing the dissertation proposal, the PhD candidate must conduct the necessary research and publish the results in a PhD dissertation. The dissertation must be submitted to the PhD committee no less than two weeks prior to the scheduled oral defense. The oral presentation by the candidate is open to the public, followed by an unspecified period during which the committee will ask questions. The question-and-answer period is not open to the public. The committee will then determine if the candidate has passed or failed the examination. If not passed, the candidate will be granted one more chance to pass the final defense.

The PhD degree is awarded for original research on a significant Environmental Engineering problem. Graduate students will work closely with individual faculty members to purse the PhD degree. PhD dissertation research is usually supported by a research grant from a government agency or an industrial contract. Many doctoral students take three to five years of full-time graduate study to complete their degrees.

Program Requirements

Post Bachelor of Science Degree		
Required Core Courses		
ENVE 660	Chemical Kinetics in Environmental Engineering	3.0
ENVS 501	Chemistry of the Environment	3.0
Required Statistics Course		**3.0-4.0**
BMES 510	Biomedical Statistics	
or ENVE 75	Data-based Engineering Modeling	
or ENVS 50	Biostatistics	
or other courses as approved by the graduate advisor		
Required Environmental Policy Course		**3.0**
CIVE 564	Sustainable Water Resource Engineering	
or ECON 618	Public Finance and Cost Benefit Analysis	
or PLCY 503	Theory and Practice of Policy Analysis	
or PLCY 504	Methods of Policy Analysis	
or other courses as approved by the graduate advisor		
Required Life Science Course		**3.0**
ENVE 516	Fundamentals of Environmental Biotechnology	
or ENVS 51	Evolutionary Ecology	
or ENVS 53	Aquatic Ecology	
or other courses as approved by the graduate advisor		
Technical Elective Requirements		**0.0-30.0**
To be determined by the PhD faculty advisor and approved by the graduate advisor		
500+ level courses in AE, CIVE, ENVE, ENVS, PLCY or other courses approved by the graduate advisor		
Research Requirements		**74.0-140.0**

Please note that the number of research credits may be reduced based on the number of Technical Electives that are required.		
CIVE 997	Research	
Dissertation Requirements		**1.0-12.0**
CIVE 998	Ph.D. Dissertation	
Total Credits		**90.0-198.0**

Post Master of Science Degree		
Technical Elective Requirements		**0.0-30.0**
To be determined by the PhD faculty advisor and approved by the graduate advisor		
500+ level courses in AE, CIVE, ENVE, ENVS, PLCY or other courses approved by the graduate advisor		
Research Requirements		**44.0-100.0**
Please note that the number of research credits may be reduced based on the number of Technical Electives that are required.		
CIVE 997	Research	
Dissertation Requirements		**1.0-12.0**
CIVE 998	Ph.D. Dissertation	
Total Credits		**45.0-142.0**

Sample Plan of Study

Upon entering the PhD program, each student will be assigned an academic advisor, and with the help of the advisor will develop and file a plan of study (which can be brought up to date when necessary). The plan of study should be filed with the graduate advisor and uploaded to the E-Forms system no later than the end of the first term (you must be connected to the Drexel VPN for access to Eforms). The Eforms system will be used to track program progression and milestones. Sample Plans of Study are presented below:

Post Bachelor of Science Degree

First Year

Fall	Credits	Winter	Credits	Spring	Credits	Summer	Credits
ENVE 516	3.0	ENVE 660	3.0	CIVE 564	3.0	Vacation	0.0
ENVE 750	3.0	Technical Electives	6.0	Technical Electives	6.0		
ENVS 501	3.0						
	9		**9**		**9**		**0**

Second Year

Fall	Credits	Winter	Credits	Spring	Credits	Summer	Credits
CIVE 997	6.0	CIVE 997	6.0	CIVE 997	9.0	Vacation	0.0
Technical Electives	3.0	Technical Electives	3.0				
	9		**9**		**9**		**0**

Third Year

	9		**9**

Total Credits 45

Facilities

The Department of Civil, Architectural, and Environmental Engineering is well equipped with state-of-the-art facilities:

- Analytical instrumentation for measuring biological and chemical contaminants in air, water and land
- Field sampling equipment for water and air measurements
- Molecular biology capability
- Computational facilities including access to multi-processor clusters, and advanced simulation and data analysis software

Civil, Architectural and Environmental Engineering Faculty

Abieyuwa Aghayere, PhD *(University of Alberta)*. Professor. Structural design - concrete, steel and wood; structural failure analysis; retrofitting of existing structures; new structural systems and materials; engineering education.

A. Emin Aktan, PhD *(University of Illinois at Urbana-Champaign) John Roebling Professor of Infrastructure Studies*. Professor. Structural engineering; health monitoring of large infrastructure systems; infrastructure evaluation; intelligent systems.

Ivan Bartoli, PhD *(University of California, San Diego)*. Associate Professor. Non-destructive evaluation and structural health monitoring; dynamic identification, stress wave propagation modeling.

Robert Brehm, PhD *(Drexel University)*. Associate Teaching Professor. International infrastructure delivery; response to natural catastrophes; risk assessment and mitigation strategies; project management techniques.

S.C. Jonathan Cheng, PhD *(West Virginia University)*. Associate Professor. Soil mechanics; geosynthetics; probabilistic design; landfill containments; engineering education.

Peter DeCarlo, PhD *(University of Colorado)*. Assistant Professor. Outdoor air quality, particulate matter size and composition instrumentation and measurements, source apportionment of ambient particulate matter, climate impacts of particulate matter.

Eugenia Ellis, RA, PhD *(Virginia Polytechnic State University)*. Associate Professor. Extended-care facilities design, research on spatial visualization, perception and imagination.

Patricia Gallagher, PhD *(Virginia Polytechnic Institute)*. Associate Professor. Soil mechanics; geoenvironmental; ground improvement; sustainability.

Patrick Gurian, PhD *(Carnegie-Mellon University)*. Associate Professor. Risk analysis of environmental and infrastructure systems; novel adsorbent materials; environmental standard setting; Bayesian statistical modeling; community outreach and environmental health.

Charles N. Haas, PhD *(University of Illinois-Urbana) L. D. Betz Professor and Department Head, Civil, Architectural and Environmental Engineering*. Professor. Control of human exposures to and risk assessment of pathogenic organisms; water and waste treatment; homeland security.

Ahmad Hamid, PhD *(McMaster University)*. Professor. Engineered masonry; seismic behavior, design and retrofit of masonry structures; development of new materials and building systems.

Y. Grace Hsuan, PhD *(Imperial College)*. Professor. Durability of polymeric construction materials; advanced construction materials; and performance of geosynthetics.

Joseph B. Hughes, PhD *(University of Iowa) Dean of the College of Engineering and Distinguished Professor*. Biological processes and applications of nanotechnology in environmental systems.

L. James Lo, PhD *(University of Texas at Austin)*. Assistant Professor. Computational Fluid Dynamics (CFD) and airflow simulation; Indoor Environmental Quality; Building control integration with building information management systems.

Roger Marino, PhD *(Drexel University)*. Associate Teaching Professor. Fluid mechanics; water resources; engineering education; land development.

Joseph P. Martin, PhD *(Colorado State University)*. Professor. Geotechnical and geoenvironmental engineering; hydrology; transportation; waste management.

James E. Mitchell, MArch *(University of Pennsylvania) Associate Dean for Undergraduate Affairs*. Professor. Architectural engineering design; building systems; engineering education.

Franco Montalto, PhD *(Cornell University)*. Associate Professor. Effects of built infrastructure on societal water needs, ecohydrologic patterns and processes, ecological restoration, green design, water interventions.

Joseph V. Mullin, PhD *(Pennsylvania State University) Associate Department Head*. Teaching Professor. Structural engineering; failure analysis; experimental stress analysis; construction materials; marine structures.

Mira S. Olson, PhD *(University of Virginia) Graduate Studies Advisor*. Associate Professor. Environmental remediation; contaminant and bacterial transport in porous media and bacterial response to dynamic environments.

Michael Ryan, PhD *(Drexel University)*. Assistant Teaching Professor. Microbial Source Tracking (MST); Quantitative Microbial Risk Assessment (QMRA); Dynamic Engineering Systems Modeling; Molecular Microbial Biology; Environmental Statistics; Engineering Economics; Microbiology

Christopher Sales, PhD *(University of California, Berkeley)*. Assistant Professor. Environmental microbiology and biotechnology; biodegradation of environmental contaminants; microbial processes for energy and resource recovery from waste.

Yared Shifferaw, PhD *(Johns Hopkins University)*. Assistant Professor. Computational and experimental mechanics; structural stability; optimization; health monitoring and hazard mitigation; sustainable structures; emerging materials; thin-walled structures and metallic structures.

Kurt Sjoblom, PhD *(Massachusetts Institute of Technology)*. Assistant Professor. Laboratory testing of geomaterials, geotechnical engineering, foundation engineering.

Sabrina Spatari, PhD *(University of Toronto)*. Associate Professor. Research in industrial ecology; development and application of life cycle assessment (LCA) and material flow analysis (MFA) methods for guiding engineering and policy decisions; specific interest in biomass and bioenergy, biofuels, and urban infrastructure.

Robert Swan Associate Teaching Professor. Geotechnical and Geosynthetic Engineering; soil/geosynthetic interaction and performance; laboratory and field geotechnical/geosynthetic testing.

Michael Waring, PhD *(University of Texas-Austin) Associate Department Head for Undergraduate Programs; Director of Architectural Engineering Program*. Associate Professor. Indoor air quality and building sustainability; indoor particulate matter fate and transport; indoor chemistry and particle formation; secondary impacts of control technologies and strategies.

Jin Wen, PhD *(University of Iowa)*. Associate Professor. Architectural engineering; Building Energy Efficiency; Intelligent Building; Net-zero Building; and Indoor Air Quality.

Aspasia Zerva, PhD *(University of Illinois)*. Professor. Earthquake engineering; mechanics; seismology; structural reliability; system identification; advanced computational computational methods in structural analysis.

Emeritus Faculty

Harry G. Harris, PhD *(Cornell University)*. Professor Emeritus. Structural models; dynamics of structures, plates and shells; industrialized building construction.

Richard Weggel, PhD *(University of Illinois) Samuel S. Baxter Professor Emeritus; Civil and Environmental Engineering*. Professor Emeritus. Coastal engineering; hydraulics engineering; hydrology.

Richard Woodring, PhD *(University of Illinois) Dean of Engineering Emeritus*. Professor Emeritus. Structural engineering, reinforced concrete.

Internet of Things MS

Major: Internet of Things
Degree Awarded: Master of Science (MS)
Calendar Type: Quarter
Minimum Required Credits: 45.0
Co-op Option: None
Classification of Instructional Programs (CIP) code: 14.1001
Standard Occupational Classification (SOC) code: 15-1143

About the Program

Drexel University's Master of Science in Internet of Things (IoT) program is a comprehensive graduate degree that prepares students for the future of interconnected devices and smart technologies. The degree requires a minimum of 45.0 approved credits. The curriculum is customizable, with

students developing their plan of study in consultation with their academic advisor.

The program envisions a world where high densities of sensors and actuators communicate to collect and process data for various applications across personal, building, and city scales. At the personal level, IoT technologies include wearables for medical applications such as respiration monitoring and telemedicine. Building-scale applications involve intelligent lighting, occupancy sensing, and smart ventilation for energy-efficient structures. City-scale technologies encompass environmental sensing for air, water, and soil quality, as well as structural health monitoring for urban infrastructure.

Students gain deep knowledge in analytics, sensors, wireless communications, and networks, enabling them to ideate, design, develop, test, and debug IoT applications. The curriculum combines core knowledge in wireless communications and networks with hands-on laboratory experience. Electives in computer engineering, embedded systems, radio frequency electronics, cybersecurity, machine learning, and data analytics further enhance students' expertise.

The program prepares engineers to address societal challenges by applying IoT technologies in various fields, including biomedical devices, intelligent buildings, smart power grids, personal health monitoring, intelligent transportation, smart mobility systems, and environmental sensing.

Drexel's MS in IoT provides students with the tools necessary to advance their careers, pursue entrepreneurial ambitions in industry, or lay the foundation for future PhD research in engineering or related fields. The program's flexibility allows students to customize their curriculum with a plan of study arranged in consultation with a departmental graduate advisor and research advisor (if applicable).

This cutting-edge program positions graduates at the forefront of the rapidly expanding IoT field, preparing them to explore and develop innovative applications that incorporate IoT technology into nearly every aspect of modern living.

Students also have the option to engage in research under the supervision of an ECE faculty member. A total of 9.0 credits of research-oriented coursework may be counted towards the minimum credit hour requirement of the degree program. These credits are considered general electives.

The MS program is designed so that a student may complete the degree requirements in less than 2 years of full-time study or 2-3 years of part-time study.

Students are eligible to take part in the Graduate Co-op Program, which combines classroom coursework with a 6-month, full-time work experience. For more information, visit the Steinbright Career Development Center's website or visit the Drexel Engineering Graduate Co-op webpage (https://drexel.edu/engineering/academics/experiential-learning-co-op/graduate-co-ops/).

Additional Information

For more information, visit the MS IoT program (https://drexel.edu/engineering/academics/graduate-programs/masters/internet-of-things/) web page.

Admission Requirements

Applicants must meet the general requirements for graduate admission, which include at least a 3.0 GPA for the last two years of undergraduate study and a bachelor's degree in computer engineering, computer science, or electrical engineering. Students holding degrees in other engineering and science disciplines with appropriate coursework or training will also be considered.

The GRE general test is optional for all applicants. TOEFL, IELTS, PTE, or Duolingo is required if the language of instruction of your previous degree was not English.

For additional information on how to apply and deadlines, visit the College of Engineering's Admission Guidelines (https://drexel.edu/engineering/admissions/graduate/admission-guidelines/) or Drexel's admissions page for Internet of Things (https://drexel.edu/academics/grad-professional-programs/engineering/internet-of-things/).

Degree Requirements

IoT Technical Elective courses		
Select 12.0 credits from the following:		12.0
ECE 506	Hands on Computer Networks	
ECE 512	Wireless Communications	
ECE 513	Introduction to Radar	
ECE 514	Basic Electronic Warfare Concepts	
ECE 600	Applied Robotics Laboratory	
ECE 603	Computing and Control	
ECE 608	Decision-Making for Robotics	
ECE 609	Mobile Sensing and Motion Planning	
ECE 610	Machine Learning & Artificial Intelligence	
ECE 612	Applied Machine Learning Engineering	
ECE 613	Neuromorphic Computing	
ECE 617	Reinforcement Learning	
ECE 630	Software Defined Radio Laboratory	
ECE 686	Cell & Tissue Image Analysis	
ECE 687	Pattern Recognition	
ECEC 531	Principles of Computer Networking	
ECEC 623	Advanced Topics in Computer Architecture	
ECEC 641	Web Security I	
ECEC 642	Web Security II	
ECEC 643	Web Security III	
ECEC 661	Digital Systems Design	
ECEE 517	Microwave Networks & Transmission Media	
ECEE 518	Microwave Passive Components	
ECEE 519	Microwave Active Subsystems	
ECEP 601	Modeling & Analysis of Power Distribution Systems	
ECEP 602	Power Distribution Automation and Control	
ECEP 603	Service and Power Quality in Distribution Systems	
ECEP 610	Power System Dynamics	
ECEP 611	Power System Security	
ECEP 612	Economic Operation of Power Systems	
ECES 643	Digital Control Systems Analysis & Design	
ECES 644	Computer Control Systems	
ECES 681	Fundamentals of Computer Vision	
ECES 682	Fundamentals of Image Processing	
ECET 511	Physical Foundations of Telecommunications Networks	
ECET 512	Wireless Systems	
ECET 602	Information Theory and Coding	
ECET 604	Internet Laboratory	
Select 21.0 credits from the following ECE Technical Elective courses:		21.0
Any ECE (Electrical & Computer Engr) course		

Any ECEC (Elec & Comp Engr-Computers) 500-900 level course	
Any ECEE (Elec & Computer Engr-Electroph) course	
Any ECEP (Elec & Computer Engr-Power Eng) course	
Any ECES (Elec & Computer Engr-Systems) course	
Any ECET (Telecommunications) course	
Select 12.0 credits from the following general ECE or elective courses at the 500-900 level in the following subject areas:	12.0
Any AE (Architectural Engineering) course	
Any BIO (Bioscience & Biotechnology) course	
Any BMES (Biomedical Engineering & Sci) course	
Any CHE (Chemical Engineering) course	
Any CHEM (Chemistry) course	
Any CIVE (Civil Engineering) course	
Any CMGT (Construction Management) course	
Any CS (Computer Science) course	
Any ECE (Electrical Engineering) course	
Any ECEC (Elec & Comp Engr-Computers) course	
Any ECEE (Elec & Computer Engr-Electroph) course	
Any ECEP (Elec & Computer Engr-Power) course	
Any ECES (Elec & Computer Engr-Systems) course	
Any ECET (Telecommunications) course	
Any EGMT (Engineering Management) course	
Any ENGR (Engineering, General) course	
Any ENTP (Entrepreneurship) course	
Any ENVE (Environmental Engineering) course

COOP 500 Career Management and Professional Development for Master's Degree Students	
Total Credits	**45.0-46.0**

*

Co-op is an option for this degree for full-time on-campus students.
To prepare for the graduate co-op experience, students will complete: COOP 500. The total credits required for this degree with the co-op experience is 46.0.
If a student completed COOP 101 as a Drexel Undergraduate co-op student, the student does not need to take COOP 500.
Students not participating in the co-op experience will need 45.0 credits to graduate.

Machine Learning Engineering MSMLE

Major: Machine Learning Engineering
Degree Awarded: Master of Science in Machine Learning Engineering (MSMLE)
Calendar Type: Quarter
Minimum Required Credits: 45.0
Co-op Option: Available for full-time, on-campus master's-level students
Classification of Instructional Programs (CIP) code: 14.0903
Standard Occupational Classification (SOC) code: 15-1132

About the Program

The Master of Science in Machine Learning Engineering (MSMLE) at Drexel University is a comprehensive program designed to equip students with the skills and knowledge necessary to excel in the rapidly evolving field of machine learning. The curriculum emphasizes core machine learning topics, mathematical theory, and signal processing, providing a solid foundation for designing, implementing, and applying machine learning algorithms to real-world problems. Students gain expertise in leveraging industry-leading software tools such as TensorFlow, Keras, and scikit-learn for rapid prototyping and development of advanced machine learning systems. The program also introduces novel computing architectures and cutting-edge applications across industries like healthcare, bioengineering, smart cities, cybersecurity, and more.

The degree requires a minimum of 45.0 approved credits. The curriculum is customizable, with students developing their plan of study in consultation with their academic advisor.

Students graduating from Drexel's MSMLE program are prepared for a career as a machine learning expert engineer or similar positions. The degree fosters critical thinking and innovation by integrating principles from various disciplines essential for creating tailored solutions to complex challenges. Students develop both individual and team-based implementation skills through practical coursework. It is ideal for individuals seeking to deepen their understanding of machine learning principles or pursue entrepreneurial ambitions while addressing societal challenges through sustainable solutions.

Students also have the option to engage in research under the supervision of an ECE faculty member. A total of 9.0 credits of research-oriented coursework may be counted towards the minimum credit hour requirement of the degree program. These credits are considered general electives.

The MS program is designed so that a student may complete the degree requirements in less than 2 years of full-time study or 2-3 years of part-time study.

Full-time on-campus students who start in a fall term are eligible to take part in the Graduate Co-op Program, which combines classroom coursework with a 6-month, full-time work experience. For more information, visit the Steinbright Career Development Center's website (http://www.drexel.edu/scdc/co-op/graduate/) or visit the Drexel Engineering Graduate Co-op webpage (https://drexel.edu/engineering/academics/experiential-learning-co-op/graduate-co-ops/).

Additional Information

For more information visit the MS in Machine Learning Engineering (https://drexel.edu/engineering/academics/graduate-programs/masters/machine-learning-engineering/) program, or the Department of Electrical and Computer Engineering (https://drexel.edu/engineering/academics/departments/electrical-computer-engineering/) website.

Admission Requirements

Applicants must satisfy general requirements for graduate admission including a minimum 3.0 GPA (on a 4.0 scale) for the last two years of undergraduate studies, as well as for any subsequent graduate work. Applicants will be required to hold a bachelor's in electrical engineering, computer engineering, or computer science. Applicants with a bachelor's degree in an aligned area (e.g. statistics, neuroscience, etc.) in addition to an appropriate technical background will also be considered during the admissions process. Prior coursework or experience with signal processing, probability, statistics, and programming languages is preferred.

The GRE general test is optional for all applicants. TOEFL, IELTS, PTE, or Duolingo is required if the language of instruction of your previous degree was not English.

For additional information on how to apply and deadlines, visit the College of Engineering's Admission Guidelines (https://drexel.edu/engineering/admissions/graduate/admission-guidelines/) or Drexel's admissions page for Machine Learning Engineering (https://drexel.edu/academics/grad-professional-programs/engineering/machine-learning-engineering/).

Degree Requirements

Core Courses		
ECE 610	Machine Learning & Artificial Intelligence	3.0
ECE 612	Applied Machine Learning Engineering	3.0
ECE 687	Pattern Recognition	3.0
ECES 521	Probability & Random Variables	3.0
Aligned Mathematical Theory		
Select two from the list below:		6.0
ECES 510	Analytical Methods in Systems	
ECES 522	Random Process & Spectral Analysis	
ECES 523	Detection & Estimation Theory	
ECES 811	Optimization Methods for Engineering Design	
ECET 602	Information Theory and Coding	
MATH 510	Applied Probability and Statistics I	
MATH 521	Numerical Analysis II

Materials Science and Engineering MSMSE

Major: Materials Science and Engineering
Degree Awarded: Master of Science in Materials Science and Engineering (MSMSE)
Calendar Type: Quarter
Minimum Required Credits: 45.0
Co-op Option: Available for full-time, on-campus master's-level students
Classification of Instructional Programs (CIP) code: 14.1801
Standard Occupational Classification (SOC) code: 17-2131

About the Program

The master of science (MS) program in Materials Science and Engineering (MSE) aims to provide an education which encompasses both the breadth and depth of the most recent knowledge base in the materials science and engineering field in a format suitable for individuals seeking careers in academia and/or industry. In addition, the program provides students with research training through research credits and/or thesis research.

The graduate student body reflects a broad spectrum of undergraduate backgrounds. Because of the expansion into interdisciplinary areas, qualified physical and biological sciences and other engineering program graduates may also join the program. Students without an undergraduate degree in Materials Science and Engineering (MSE) are required to take MATE 503 *Introduction to Materials Engineering*.

The MS program in Materials Science and Engineering (MSE) is offered both on a regular full-time and on a part-time basis.

Career Opportunities

Graduates go on to careers in engineering firms, consulting firms, law firms, private industry, business, research laboratories, academia, and national laboratories. Materials scientists and engineers find employment in such organizations as Hewlett-Packard, Boeing, Intel, 3M, Global Foundries, Chemours, Lockheed-Martin, Johnson and Johnson, Merck, AstraZeneca, Arkema, W.L. Gore, Army Research Laboratory, Los Alamos National Laboratory, Air Products, Micron, Motorola and Corning.

Additional Information

For more information, visit the Materials Science and Engineering program (https://drexel.edu/engineering/academics/graduate-programs/masters/materials-science-engineering/) and the Department of Materials Science and Engineering (https://drexel.edu/engineering/academics/departments/materials-science-engineering/) webpage.

Admission Requirements

Applicants must meet the graduate requirements for admission to Drexel University. The graduate student body reflects a broad spectrum of undergraduate backgrounds. Because of the expansion into interdisciplinary areas, qualified non-MSE engineering, physical, and biological science graduates may also join the program.

For specific information on how to apply to this program, visit Drexel University's Materials Science and Engineering Graduate Admissions (http://www.drexel.edu/grad/programs/coe/materials-science-engineering/) webpage.

Degree Requirements

The 45.0 quarter credits required for the MS degree include two required core courses on MATE 510 *Thermodynamics of Solids* and MATE 512 *Introduction to Solid State Materials*. Students choose four additional selected core courses.

Thesis Options

Students pursuing the thesis option are required to undertake a 9.0 credit thesis on a topic of materials research supervised by a faculty member. Alternatively, MS students can select the non-thesis option, in which case the thesis may be replaced by 9.0 credits of coursework.

All students pursuing the thesis option are required to propose an advisor-supported research thesis topic during their first year. Students are urged to make a choice of topic as early as possible and to choose appropriate graduate courses in consultation with their advisor.

The program is organized so that part-time students may complete the degree requirements in two to four years. Full-time students may complete the program in two years.

There is no general exam required for MS students. If an MS student wishes to continue for a PhD, then the student must apply and be admitted to the PhD program. (There is no guarantee that an MS student will be admitted to the PhD program.)

Materials Science and Engineering (MSMSE) Core Courses		
Required core courses:		
MATE 510	Thermodynamics of Solids	3.0
MATE 512	Introduction to Solid State Materials	3.0
Four additional Selected Core (SC) courses from the following:		12.0
MATE 501	Structure and Properties of Polymers	
MATE 507	Kinetics	
MATE 515	Experimental Technique in Materials	
MATE 535	Numerical Engineering Methods	
MATE 563	Ceramics	
MATE 610	Mechanical Behavior of Solids	
MATE 661	Biomedical Materials I	
Any additional related courses if approved by the graduate advisor.		
Technical Electives *		**18.0**
Thesis and Alternatives		**9.0**
9.0 credits MATE 898 (MS thesis) or 9.0 credits of Technical Electives (TE).		

Optional Coop Experience **		0-1
COOP 500	Career Management and Professional Development for Master's Degree Students	
Total Credits		**45.0-46.0**

*****

Of the 18.0 technical elective credits, which may include up to 9.0 credits of MATE 897, at least 9.0 credits must be taken as Materials Science and Engineering (MATE) courses, while the rest may be taken within the College of Engineering, College of Arts and Sciences, or at other colleges if consistent with the student's plan of study (and given advance written approval by their advisor). At least 9.0 of these 18.0 technical electives must be exclusive of independent study courses or research credits. Any graduate-level course in a STEM field (Engineering, Physical Sciences, or Computing/Data), as approved by the MSE Graduate Advisor, excluding MATE 536 (Materials Seminar), MATE 503 (Introduction to Materials Engineering) and MATE 504 (Art of Being a Scientist).

******

Co-op is an option for this degree for full-time on-campus students. To prepare for the 6-month co-op experience, students will complete: COOP 500. The total credits required for this degree with the co-op experience is 46.
Students not participating in the co-op experience will need 45.0 credits to graduate.

Facilities

Nanobiomaterials and Cell Engineering Laboratory
This laboratory contains a fume hood with vacuum/gas dual manifold, vacuum pump and rotary evaporator for general organic/ polymer synthesis; gel electrophoresis and electroblotting for protein characterization; bath sonicator, glass homogenizer and mini-extruder for nanoparticle preparation; centrifuge; ultrapure water conditioning system; precision balance; pH meter and shaker.

Ceramics Processing Laboratory
This laboratory contains a photo-resist spinner, impedance analyzer, Zeta potential meter, spectrafluorometer, piezoelectric d33 meter, wire-bonder, and laser displacement meter.

Layered Solids Laboratory
This laboratory contains a vacuum hot-press; creep testers, Ar-atmosphere glove-box, high-speed saw, and assorted high temperature furnaces; metallographic preparation facilities; high temperature closed-loop servo-hydraulic testing machines.

Mechanical Testing Laboratory
This laboratory contains mechanical and closed-loop servo-hydraulic testing machines, hardness testers, Charpy and Izod impact testers, equipment for fatigue testing, metallographic preparation facilities and a rolling mill with twin 6" diameter rolls.

Macromolecular Materials Laboratory
This laboratory contains a hybrid rheometer, inert environment glove box, size exclusion chromatography with multi-angle laser light scattering, HPLC and RI detector & MALS, centrifuge, rotovapor, and vacuum oven used for developing innovative synthetic platforms to generate functional soft materials with complex macromolecular architectures.

Mesoscale Materials Laboratory
This laboratory contains instrumentation for growth, characterization, device fabrication, and design and simulation of electronic, dielectric, ferroelectric and photonic materials. Resources include physical and chemical vapor deposition and thermal and plasma processing of thin films, including oxides and metals, and semiconductor nanowire growth. Facilities include pulsed laser deposition, atomic layer deposition (ALD), chemical vapor deposition (CVD), sublimation growth, and resistive thermal evaporation. Variable-temperature high-vacuum probe station and optical cryostats including high magnetic field, fixed and tunable-wavelength laser sources, several monochromators for luminescence and Raman scattering spectroscopy, scanning electron microscopy with electron beam lithography, and a scanning probe microscope.

Nanomaterials Laboratory
This laboratory contains instrumentation for synthesizing, testing and manipulation of nanomaterials carbon and two dimensional carbides under microscope, high-temperature autoclaves, Sievert’s apparatus; glove-boxes; high-temperature vacuum and other furnaces for the

synthesis of nano-carbon coatings and nanotubes; tube furnaces for synthesis of carbides and nitrides; potentiostat/galvanostat for electrochemical testings; ultraviolet-visible (UV-VIS) spectrophotometry; Raman spectrometers; Differential scanning calorimeter (DSC) and thermogravimetric analyzer (TGA) up to 1500 °C with mass spectrometer, Zeta potential analyzer; attrition mill, bath and probe sonicators, centrifuges; electro-spinning system for producing nano-fibers.

Functional Inorganic Materials Synthesis Laboratory
The laboratory contains equipment for the synthesis of inorganic and hybrid materials, including gas cabinets for NH_3 and H_2, a CVD furnace, and spin-coater; UV-Vis spectrophotometer; and a photodegradation test station with Xe 1000 W lamp.

Films and Heterostructures Laboratory
This laboratory contains an oxide molecular beam epitaxy (MBE) thin film deposition system; physical properties measurement system (PPMS) for electronic transport and magnetometry measurements from 2 to 400 K, up to 9 T fields; 2 tube furnaces; spectroscopic ellipsometer.

Powder Processing Laboratory
This laboratory contains vee blenders, ball-mills, sieve shaker + sieves for powder classification, several furnaces.

Soft Matter Research and Polymer Processing Laboratories
These laboratories contain computerized thermal analysis facilities including differential scanning calorimeters (DSC), dynamic mechanical analyzer (DMA) and thermo-gravimetric analyzer (TGA); tabletop tensile tester; strip biaxial tensile tester; vacuum evaporator; spin coater; centrifuge; optical microscope with hot stage; liquid crystal tester; microbalance; ultrasonic cleaner; laser holographic fabrication system; polymer injection molder and single screw extruder.

Natural Polymers and Photonics Laboratory
This laboratory contains a high purity liquid chromatography (HPLC) system; refractometer; electro-spinning and touch-spinning systems for producing nanofibers.

X-ray Tomography Laboratory
This laboratory contains a high resolution X-ray micro-tomography instrument and a cluster of computers for 3D microstructure reconstruction; mechanical stage, a positioning stage and a cryostage for *in-situ* testing.

MSE Undergraduate Teaching Laboratory
Contains an FTIR spectrometer, metallographic sample preparation, equipment, polymer 3D printers, polymer extruder and injection molder, Vickers hardness tester, inverted metallograph, multiple furnaces.

Materials Characterization Core (MCC)
The Department of Materials Science & Engineering relies on the Materials Characterization Core facilities within the University for materials characterization and micro- and nano-fabrication. These facilities contain a number of state-of-the-art materials characterization instruments, including high resolution and variable pressure field-emission scanning electron microscopes (SEMs) with Energy Dispersive Spectroscopy (EDS) for elemental analysis, Orientation Image Microscopy (OIM) for texture analysis, various *in-situ* and *in-operando* stages (cryo mat, heating, tensile, 3- and 4-point bending, and electrochemistry); two Transmission Electron Microscopes (TEMs) with STEM capability and TEM sample preparation equipment; a dual-beam focused ion beam (FIB) system for nano-characterization and nano fabrication; a Nanoindenter; an X-ray Photoelectron Spectrometer (XPS)/Electron Spectroscopy for Chemical Analysis (ESCA) system; X-Ray Diffractometers (XRD); and an X-ray microscope (NanoCT) with an *in-situ* tensile/compression temperature controlled stage.

More details of these instruments, information on how to access them, and instrument usage rates can be found at Drexel University's Materials Characterization Core webpage.

Program Level Outcomes

- Materials Science and Engineering program graduates possess the core technical competencies in their field necessary to successfully interface with other engineering disciplines in the workplace.
- Materials Science and Engineering program graduates are leaders in their chosen fields.
- Materials Science and Engineering program graduates are engaged in lifelong learning.
- Materials Science and Engineering program graduates possess written and verbal communication skills appropriate for professional materials engineers and/or scientists.

Materials Science and Engineering Faculty

Michel Barsoum, PhD *(Massachusetts Institute of Technology)*. Distinguished Professor. Processing and characterization of novel ceramics and ternary compounds, especially the MAX and 2-D MXene phases.

Jason Baxter, PhD *(University of California, Santa Barbara)*. Associate Professor. Solar cells, semiconductor nanomaterials, ultrafast spectroscopy.

Hao Cheng, PhD *(Northwestern University)*. Assistant Professor. Drug delivery, molecular self-assembly, cell-nanomaterial interactions, regenerative medicine and cell membrane engineering.

Adam K. Fontecchio, PhD *(Brown University) Vice Dean, Graduate College*. Professor. Electro-optics; remote sensing; active optical elements; liquid crystal devices.

Alexander Fridman, DSc, PhD *(Moscow Institute of Physics and Technology) Mechanical Engineering and Mechanics, John A. Nyheim Endowed University Chair Professor, Director of the Drexel Plasma Institute*. Professor. Plasma science and technology; pollutant mitigation; super-adiabatic combustion; nanotechnology and manufacturing.

Yury Gogotsi, PhD *(Kiev Polytechnic Institute) Director, A. J. Drexel Nanotechnology Institute*. Distinguished University & Trustee Chair Professor. Nanomaterials; carbon nanotubes; nanodiamond; graphene; MXene; materials for energy storage, supercapacitors, and batteries.

Haviva M. Goldman, PhD *(City University of New York) Neurobiology and Anatomy*. Associate Professor. Understanding how the size and shape of whole bones, as well as the distribution quantity and quality of the mineralized tissue that forms the bone, reflect both evolutionary constraints of skeletal growth and development, and responsiveness to mechanical loading during life.

Lin Han, PhD *(Massachusetts Institute of Technology)*. Assistant Professor. Nanoscale structure-property relationships of biological materials, genetic and molecular origins soft joint tissue diseases, biomaterials under extreme conditions, coupling between stimulus-responsiveness and geometry.

Maher Harb, PhD *(University of Toronto)*. Assistant Professor. Solid state physics, ultrafast electron diffraction, time-resolved X-ray diffraction, ultrafast lasers, nanofabrication, nano/microfluidics, instrument development, vacuum technologies.

Haifeng Frank Ji, PhD *(Chinese Academy of Sciences)*. Professor. Chemistry Micromechancial sensors for biological and environmental applications; Nanomechanical drug screening technology.

Vibha Kalra, PhD *(Cornell University) Chemical and Biological Engineering*. Assistant Professor. Electrodes for energy storage and conversion; supercapacitors; Li-S batteries; fuel cells; flow batteries; electrospinning for nanofibers; molecular dynamics simulations; Nanotechnology, polymer nanocomposites.

Richard Knight, PhD *(Loughborough University) Associate Department Head and Undergraduate Advisor*. Teaching Professor. Thermal plasma technology; thermal spray coatings and education; plasma chemistry and synthesis.

E. Caglan Kumbur, PhD *(Pennsylvania State University)*. Associate Professor. Mechanical Engineering and Mechanics Next generation energy technologies; fuel cell design and development.

Harry G. Kwatny, PhD *(University of Pennsylvania) S. Herbert Raynes Professor of Mechanical Engineering*. Professor. Dynamic systems analysis; stochastic optimal control; control of electric power plants and systems.

Leslie Lamberson, PhD *(California Institute of Technology) P.C. Chou Assistant Professor of Mechanical Angineering*. Assistant Professor. Dynamic behavior of materials, dynamic fracture, damage micromechanics, active materials.

Kenneth K.S. Lau, PhD *(Massachusetts Institute of Technology) Chemical and Biological Engineering*. Associate Professor. Surface science; nanotechnology; polymer thin films and coatings; chemical vapor deposition.

Christopher Y. Li, PhD *(University of Akron)*. Professor. Soft and hybrid materials for optical, energy, and bio applications; polymeric materials, nanocomposites, structure and properties.

Andrew Magenau, PhD *(University of Southern Mississippi)*. Assistant Professor. Structurally complex materials exhibiting unique physical properties designed and fabricated using an assortment of methodologies involving directed self-assembly, externally applied stimuli, structure-function correlation, and applied engineering principles suited for technologies in regenerative medicine, biological interfacing, catalytic, electronic, and optical applications

Michele Marcolongo, PhD, PE *(University of Pennsylvania) Department Head*. Professor. Orthopedic biomaterials; acellular regenerative medicine, biomimetic proteoglycans; hydrogels.

Steven May, PhD *(Northwestern University)*. Associate Professor. Synthesis of complex oxide films, superlattices, and devices; materials for energy conversion and storage; magnetic and electronic materials; x-ray and neutron scattering.

Bahram Nabet, PhD *(University of Washington) Associate Dean for Special Projects, College of Engineering; Electrical and Computer Engineering*. Professor. Optoelectronics; fabrication and modeling; fiber optic devices; nanoelectronics; nanowires.

Giuseppe R. Palmese, PhD *(University of Delaware) Department Head, Chemical and Biological Engineering*. Professor. Reacting polymer systems; nanostructured polymers; radiation processing of materials; composites and interfaces.

Ekaterina Pomerantseva, PhD *(Moscow State University, Russia)*. Assistant Professor. Solid state chemistry; electrochemical characterization, lithium-ion batteries, energy generation and storage; development and characterization of novel nanostructured materials, systems and architectures for batteries, supercapacitors and fuel cells.

Caroline L. Schauer, PhD *(SUNY Stony Brook) Graduate Advisor*. Associate Professor. Polysaccharide thin films and nanofibers.

Wan Y. Shih, PhD *(Ohio State University)*. Associate Professor. Piezoelectric microcantilever biosensors development, piezoelectric finger development, quantum dots development, tissue elasticity imaging, piezoelectric microcantilever force probes.

Wei-Heng Shih, PhD *(Ohio State University)*. Professor. Colloidal ceramics and sol-gel processing; piezoelectric biosensors, optoelectronics, and energy harvesting devices; nanocrystalline quantum dots for bioimaging, lighting, and solar cells.

Karl Sohlberg, PhD *(University of Delaware)*. Associate Professor. Chemistry Computational and theoretical materials-related chemistry: (1) complex catalytic materials; (2) mechanical and electrical molecular devices.

Jonathan E. Spanier, PhD *(Columbia University) Associate Dean, Strategic Planning, College of Engineering*. Professor. Light-matter interactions in electronic materials, including ferroelectric semiconductors, complex oxide thin film science; laster spectroscopy, including Raman scattering.

Kara Spiller, PhD *(Drexel University)*. Assistant Professor. Macrophage-biometerial interactions, drug delivery systems, and chronic would healing. Cell-biomaterial interactions, biomaterial design, and international engineering education.

Mitra Taheri, PhD *(Carnegie Mellon University) Hoeganeas Associate Professor of Metallurgy*. Associate Professor. Development of the ultrafast Dynamic Transmission Electron Microscope (DTEM) for the study of laser-induced microstructural evolution/phase transformations in nanostructured materials; use of various in-situ Transmission Electron Microscopy techniques.

Garritt Tucker, PhD *(Georgial Institute of Technology)*. Assistant Professor. Computational materials science and engineering; microstructural evolutiona nd material behavior in extreme environments; interfacial-driven processes for improving material functionality; multi-scale physics modeling.

Christopher Weinberger, PhD *(Stanford University)*. Assistant Professor. Mechanical Engineering and Mechanics Multiscale materials modeling of mechanical properties including DFT, atomistics, mesoscale and microscale FEM modeling.

Christopher Weyant, PhD *(Northwestern University)*. Associate Teaching Professor.

Margaret Wheatley, PhD *(University of Toronto) John M. Reid Professor*. Ultrasound contrast agent development (tumor targeting and triggered drug delivery), controlled release technology (bioactive compounds),

microencapsulated allografts (ex vivo gene therapy) for spinal cord repair.

Antonios Zavaliangos, PhD *(Massachusetts Institute of Technology) A.W. Grosvenor Professor*. Professor. Constitutive modeling; powder compaction and sintering; pharmaceutical tableting, X-ray tomography.

Emeritus Faculty

Roger D. Corneliussen, PhD *(University of Chicago)*. Professor Emeritus. Fracture, blends and alloys, as well as compounding.

Roger D. Doherty, PhD *(Oxford University)*. Professor Emeritus. Metallurgical processing; thermo-mechanical treatment.

Ihab L. Kamel, PhD *(University of Maryland)*. Professor Emeritus. Nanotechnology, polymers, composites, biomedical applications, and materials-induced changes through plasma and high energy radiation.

Jack Keverian, PhD *(Massachusetts Institute of Technology)*. Professor Emeritus. Rapid parts manufacturing, computer integrated manufacturing systems, strip production systems, technical and/or economic modeling, melting and casting systems, recycling systems.

Alan Lawley, PhD *(University of Birmingham, England)*. Professor Emeritus. Mechanical and physical metallurgy, powder metallurgy, materials engineering design, engineering education.

Materials Science and Engineering PhD

Major: Materials Science and Engineering
Degree Awarded: Doctor of Philosophy (PhD)
Calendar Type: Quarter
Minimum Required Credits: 90.0
Co-op Option: None
Classification of Instructional Programs (CIP) code: 14.1801
Standard Occupational Classification (SOC) code: 17-2131

About the Program

The PhD program in Materials Science and Engineering (MSE) aims to provide an education which encompasses both the breadth and depth of the most recent knowledge base in the materials science and engineering field in a format suitable for individuals seeking careers in academia and/or industry.

In addition, the program provides students with in-depth research training through their dissertation project.

The graduate student body reflects a broad spectrum of undergraduate backgrounds. Because of the expansion into interdisciplinary areas, qualified physical and biological sciences graduates, and graduates from other engineering disciplines may also join the program. Students without a degree in Materials Science and Engineering (MSE) are required to take MATE 503 *Introduction to Materials Engineering*.

Career Opportunities

PhD program graduates go on to careers in engineering firms, consulting firms, law firms, private industry, business, research laboratories, academia, and national laboratories. Materials scientists and engineers find employment in such organizations as Hewlett-Packard, Intel, 3M, Global Foundries, Chemours, Lockheed-Martin, Johnson and Johnson, Merck, AstraZeneca, Arkema, W. L. Gore, Army Research Laboratory, Los Alamos National Laboratory, Air Products, Micron, and Corning.

Additional Information

For more information visit the Materials Science and Engineering PhD program (https://drexel.edu/engineering/academics/graduate-programs/doctoral/materials-science-engineering/) and the Department of Materials Science and Engineering (https://drexel.edu/engineering/academics/departments/materials-science-engineering/) webpage.

Admission Requirements

Applicants must meet the graduate requirements for admission to Drexel University. The graduate student body reflects a broad spectrum of undergraduate backgrounds. Because of the expansion into interdisciplinary areas, qualified non-MSE engineering, physical, and biological science graduates may also join the program.

For specific information on how to apply to this program, visit Drexel University's Materials Science and Engineering Graduate Admissions (http://www.drexel.edu/grad/programs/coe/materials-science-engineering/) webpage.

Degree Requirements

Curriculum

A student must have at least the required 90.0 quarter credits for the PhD degree. An MS degree *is not* a prerequisite for the PhD degree, but can count for 45.0 quarter credits if the courses are approved by the graduate advisor. For students without an MS degree, but with previous graduate coursework, they may transfer no more than 15.0 credits (equivalent to 12.0 semester credits) from approved institutions provided they follow the rules and regulations described in the Materials Requirements of Graduate Degrees.

The required 90.0 credits for a PhD degree are tabulated below:

- Required core courses: 6.0 credits
- Additional required courses: 7.0 credits (MATE 504 & MATE 536 [1.0 credit for first 6 terms])
- Selected core courses: 12.0 credits
- Optional courses: 9.0 credits
- Research or additional option courses: 47.0 credits
- Dissertation: 9.0 credits (MATE 998)
  Total: 90.0 credits

Program Requirements

Required Core Courses: *		
MATE 510	Thermodynamics of Solids	3.0
MATE 512	Introduction to Solid State Materials	3.0
Additional Required Courses:		
MATE 504	The Art of Being a Scientist	2.0
MATE 536	Materials Seminar Series **	6.0
MATE 998	Ph.D. Dissertation	9.0
Selected Core (SC) Courses		
Select four from the list below:		12.0
MATE 501	Structure and Properties of Polymers	
MATE 507	Kinetics	
MATE 514	Structure, Symmetry, and Properties of Materials	
MATE 515	Experimental Technique in Materials	
MATE 535	Numerical Engineering Methods	

MATE 563	Ceramics	
MATE 610	Mechanical Behavior of Solids	
MATE 661	Biomedical Materials I	
Related MATE courses may be counted as SC as approved by the graduate advisor		
MATE Technical Electives (TE):		
Select 9.0 credits from the list below:		9.0
MATE 541	Introduction to Transmission Electron Microscopy and Related Techniques	
MATE 544	Nanostructured Polymeric Materials	
MATE 572	Materials for High Temperature and Energy	
MATE 576	Recycling of Materials	
MATE 582	Materials for Energy Storage	
MATE 583	Environmental Effects on Materials	
MATE 585	Nanostructured Carbon Materials	
MATE 602	Soft Materials	
MATE 603	Advanced Polymer Characterization	
MATE 604	Principles of Polymerization I	
MATE 702	Natural Polymers	
MATE T580	Special Topics in Materials Engineering	
Other MATE courses that may be available		
Out-of-department courses, as approved by the MSE graduate advisor		
MATE 897	Research	46.0-140.0
Total Credits		**90.0-184.0**

Students must successfully pass degree-required exams including final dissertation defense and submission of the final dissertation.

*****

PhD students must achieve a minimum "B-" grade in each of the required core courses. Waiver of any of the six (6) core courses must be approved by the MSE Department graduate advisor and the student's thesis advisor in advance.

******

MATE 536 is a 1.0 credit course that must be repeated 6 times.

An introductory course, MATE 503, is required for students without an undergraduate materials science and engineering degree.

Additional courses are encouraged for students entering the department with an MS degree. Students choose a doctoral thesis topic after consultation with the faculty. Students are required to consider topics early in the program. An oral thesis presentation and defense are scheduled at the completion of the thesis work.

In addition to the graduate seminar, which is required of all graduate students, doctoral program students must pass an oral candidacy examination and a thesis proposal defense. The exam is designed to improve and assess the communication skills and the analytical abilities of the student. The following procedures should be followed to complete the PhD.

Candidacy Exam Requirement

All MSE PhD students are required to take the PhD Candidacy Examinations administered by the MSE Department.

Additional Information

For more information, visit the Department of Materials Science and Engineering (https://drexel.edu/engineering/academics/departments/materials-science-engineering/) webpage.

Sample Plan of Study

First Year

Fall	Credits	Winter	Credits	Spring	Credits	Summer	Credits
MATE 504	2.0	MATE 510	3.0	MATE 536	1.0	MATE 897	9.0
MATE 536	1.0	MATE 536	1.0	MATE 897	2.0		
MATE Selected Core Courses (SC)	6.0	MATE 897	2.0	MATE Selected Core Course (SC)	3.0		
		MATE Selected Core Course (SC)	3.0	MATE Technical Elective Course (TE)	3.0		
	9		**9**		**9**		**9**

Second Year

Fall	Credits	Winter	Credits	Spring	Credits	Summer	Credits
MATE 536	1.0	MATE 512	3.0	MATE 536	1.0	MATE 897	9.0
MATE 897	2.0	MATE 536	1.0	MATE 897	8.0		
MATE Technical Elective Courses (TE)	6.0	MATE 897	5.0				
	9		**9**		**9**		**9**

Third Year

Fall	Credits	Winter	Credits
MATE 897	9.0	MATE 998	9.0
	9		**9**

Total Credits 90

At least 90.0 credits are required for the PhD degree, which is based on the completion of a dissertation. Typical PhD students complete between 144.0-216.0 credits in the course of their PhD studies.

Facilities

Nanobiomaterials and Cell Engineering Laboratory
This laboratory contains a fume hood with vacuum/gas dual manifold, vacuum pump and rotary evaporator for general organic/polymer synthesis; gel electrophoresis and electroblotting for protein characterization; bath sonicator, glass homogenizer and mini-extruder for nanoparticle preparation; centrifuge; ultrapure water conditioning system; precision balance; pH meter and shaker.

Ceramics Processing Laboratory
This laboratory contains a photo-resist spinner, impedance analyzer, Zeta potential meter, spectrafluorometer, piezoelectric d33 meter, wire-bonder, and laser displacement meter.

Layered Solids Laboratory
This laboratory contains a vacuum hot-press; creep testers, Ar-atmosphere glove-box, high-speed saw, and assorted high temperature furnaces; metallographic preparation facilities; high temperature closed-loop servo-hydraulic testing machines.

Mechanical Testing Laboratory
This laboratory contains mechanical and closed-loop servo-hydraulic testing machines, hardness testers, Charpy and Izod impact testers, equipment for fatigue testing, metallographic preparation facilities and a rolling mill with twin 6" diameter rolls.

Macromolecular Materials Laboratory
This laboratory contains a hybrid rheometer, inert environment glove box, size exclusion chromatography with multi-angle laser light scattering, HPLC and RI detector & MALS, centrifuge, rotovapor, and vacuum oven used for developing innovative synthetic platforms to generate functional soft materials with complex macromolecular architectures.

Mesoscale Materials Laboratory
This laboratory contains instrumentation for growth, characterization, device fabrication, and design and simulation of electronic, dielectric, ferroelectric and photonic materials. Resources include physical and chemical vapor deposition and thermal and plasma processing of thin films, including oxides and metals, and semiconductor nanowire growth. Facilities include pulsed laser deposition, atomic layer deposition (ALD), chemical vapor deposition (CVD), sublimation growth, and resistive thermal evaporation. Variable-temperature high-vacuum probe station and optical cryostats including high magnetic field, fixed and tunable-wavelength laser sources, several monochromators for luminescence and Raman scattering spectroscopy, scanning electron microscopy with electron beam lithography, and a scanning probe microscope.

Nanomaterials Laboratory
This laboratory contains instrumentation for synthesizing, testing and manipulation of nanomaterials carbon and two dimensional carbides under microscope, high-temperature autoclaves, Sievert's apparatus; glove-boxes; high-temperature vacuum and other furnaces for the synthesis of nano-carbon coatings and nanotubes; tube furnaces for synthesis of carbides and nitrides; potentiostat/galvanostat for electrochemical testings; ultraviolet-visible (UV-VIS) spectrophotometry; Raman spectrometers; Differential scanning calorimeter (DSC) and thermogravimetric analyzer (TGA) up to 1500 °C with mass spectrometer, Zeta potential analyzer; attrition mill, bath and probe sonicators, centrifuges; electro-spinning system for producing nano-fibers.

Functional Inorganic Materials Synthesis Laboratory
The laboratory contains equipment for the synthesis of inorganic and hybrid materials, including gas cabinets for NH_3 and H_2, a CVD furnace, and spin-coater; UV-Vis spectrophotometer; and a photodegradation test station with Xe 1000 W lamp.

Films and Heterostructures Laboratory
This laboratory contains an oxide molecular beam epitaxy (MBE) thin film deposition system; physical properties measurement system (PPMS) for electronic transport and magnetometry measurements from 2 to 400 K, up to 9 T fields; 2 tube furnaces; spectroscopic ellipsometer.

Powder Processing Laboratory
This laboratory contains vee blenders, ball-mills, sieve shaker + sieves for powder classification, several furnaces.

Soft Matter Research and Polymer Processing Laboratories
These laboratories contain computerized thermal analysis facilities including differential scanning calorimeters (DSC), dynamic mechanical analyzer (DMA) and thermo-gravimetric analyzer (TGA); tabletop tensile tester; strip biaxial tensile tester; vacuum evaporator; spin coater; centrifuge; optical microscope with hot stage; liquid crystal tester; microbalance; ultrasonic cleaner; laser holographic fabrication system; polymer injection molder and single screw extruder.

Natural Polymers and Photonics Laboratory
This laboratory contains a high purity liquid chromatography (HPLC) system; refractometer; electro-spinning and touch-spinning systems for producing nanofibers.

X-ray Tomography Laboratory
This laboratory contains a high resolution X-ray micro-tomography instrument and a cluster of computers for 3D microstructure reconstruction; mechanical stage, a positioning stage and a cryostage for *in-situ* testing.

MSE Undergraduate Teaching Laboratory
Contains an FTIR spectrometer, metallographic sample preparation, equipment, polymer 3D printers, polymer extruder and injection molder, Vickers hardness tester, inverted metallograph, multiple furnaces.

Materials Characterization Core (MCC)
The Department of Materials Science & Engineering relies on the Materials Characterization Core facilities within the University for materials characterization and micro- and nano-fabrication. These facilities contain a number of state-of-the-art materials characterization instruments, including high resolution and variable pressure field-emission scanning electron microscopes (SEMs) with Energy Dispersive Spectroscopy (EDS) for elemental analysis, Orientation Image Microscopy (OIM) for texture analysis, various *in-situ* and *in-operando* stages (cryo mat, heating, tensile, 3- and 4-point bending, and electrochemistry); two Transmission Electron Microscopes (TEMs) with STEM capability and TEM sample preparation equipment; a dual-beam focused ion beam (FIB) system for nano-characterization and nano fabrication; a Nanoindenter; an X-ray Photoelectron Spectrometer (XPS)/Electron Spectroscopy for Chemical Analysis (ESCA) system; X-Ray Diffractometers (XRD); and an X-ray microscope (NanoCT) with an *in-situ* tensile/compression temperature controlled stage.

More details of these instruments, information on how to access them, and instrument usage rates can be found at Drexel University's Materials Characterization Core webpage.

Program Level Outcomes

- Materials Science and Engineering program graduates possess the core technical competencies in their field necessary to successfully interface with other engineering disciplines in the workplace.
- Materials Science and Engineering program graduates are leaders in their chosen fields.
- Materials Science and Engineering program graduates are engaged in lifelong learning.
- Materials Science and Engineering program graduates possess written and verbal communication skills appropriate for professional materials engineers and/or scientists.

Materials Science and Engineering Faculty

Michel Barsoum, PhD *(Massachusetts Institute of Technology)*. Distinguished Professor. Processing and characterization of novel ceramics and ternary compounds, especially the MAX and 2-D MXene phases.

Jason Baxter, PhD *(University of California, Santa Barbara)*. Associate Professor. Solar cells, semiconductor nanomaterials, ultrafast spectroscopy.

Hao Cheng, PhD *(Northwestern University)*. Assistant Professor. Drug delivery, molecular self-assembly, cell-nanomaterial interactions, regenerative medicine and cell membrane engineering.

Adam K. Fontecchio, PhD *(Brown University) Vice Dean, Graduate College*. Professor. Electro-optics; remote sensing; active optical elements; liquid crystal devices.

Alexander Fridman, DSc, PhD *(Moscow Institute of Physics and Technology) Mechanical Engineering and Mechanics, John A. Nyheim Endowed University Chair Professor, Director of the Drexel Plasma Institute*. Professor. Plasma science and technology; pollutant mitigation; super-adiabatic combustion; nanotechnology and manufacturing.

Yury Gogotsi, PhD *(Kiev Polytechnic Institute) Director, A. J. Drexel Nanotechnology Institute*. Distinguished University & Trustee Chair Professor. Nanomaterials; carbon nanotubes; nanodiamond; graphene; MXene; materials for energy storage, supercapacitors, and batteries.

Haviva M. Goldman, PhD *(City University of New York) Neurobiology and Anatomy*. Associate Professor. Understanding how the size and shape of whole bones, as well as the distribution quantity and quality of the mineralized tissue that forms the bone, reflect both evolutionary constraints of skeletal growth and development, and responsiveness to mechanical loading during life.

Lin Han, PhD *(Massachusetts Institute of Technology)*. Assistant Professor. Nanoscale structure-property relationships of biological materials, genetic and molecular origins soft joint tissue diseases, biomaterials under extreme conditions, coupling between stimulus-responsiveness and geometry.

Maher Harb, PhD *(University of Toronto)*. Assistant Professor. Solid state physics, ultrafast electron diffraction, time-resolved X-ray diffraction, ultrafast lasers, nanofabrication, nano/microfluidics, instrument development, vacuum technologies.

Haifeng Frank Ji, PhD *(Chinese Academy of Sciences)*. Professor. Chemistry Micromechancial sensors for biological and environmental applications; Nanomechanical drug screening technology.

Vibha Kalra, PhD *(Cornell University) Chemical and Biological Engineering*. Assistant Professor. Electrodes for energy storage and conversion; supercapacitors; Li-S batteries; fuel cells; flow batteries; electrospinning for nanofibers; molecular dynamics simulations; Nanotechnology, polymer nanocomposites.

Richard Knight, PhD *(Loughborough University) Associate Department Head and Undergraduate Advisor*. Teaching Professor. Thermal plasma technology; thermal spray coatings and education; plasma chemistry and synthesis.

E. Caglan Kumbur, PhD *(Pennsylvania State University)*. Associate Professor. Mechanical Engineering and Mechanics Next generation energy technologies; fuel cell design and development.

Harry G. Kwatny, PhD *(University of Pennsylvania) S. Herbert Raynes Professor of Mechanical Engineering*. Professor. Dynamic systems analysis; stochastic optimal control; control of electric power plants and systems.

Leslie Lamberson, PhD *(California Institute of Technology) P.C. Chou Assistant Professor of Mechanical Angineering*. Assistant Professor. Dynamic behavior of materials, dynamic fracture, damage micromechanics, active materials.

Kenneth K.S. Lau, PhD *(Massachusetts Institute of Technology) Chemical and Biological Engineering*. Associate Professor. Surface science; nanotechnology; polymer thin films and coatings; chemical vapor deposition.

Christopher Y. Li, PhD *(University of Akron)*. Professor. Soft and hybrid materials for optical, energy, and bio applications; polymeric materials, nanocomposites, structure and properties.

Andrew Magenau, PhD *(University of Southern Mississippi)*. Assistant Professor. Structurally complex materials exhibiting unique physical properties designed and fabricated using an assortment of methodologies involving directed self-assembly, externally applied stimuli, structure-function correlation, and applied engineering principles suited for technologies in regenerative medicine, biological interfacing, catalytic, electronic, and optical applications

Michele Marcolongo, PhD, PE *(University of Pennsylvania) Department Head*. Professor. Orthopedic biomaterials; acellular regenerative medicine, biomimetic proteoglycans; hydrogels.

Steven May, PhD *(Northwestern University)*. Associate Professor. Synthesis of complex oxide films, superlattices, and devices; materials for energy conversion and storage; magnetic and electronic materials; x-ray and neutron scattering.

Bahram Nabet, PhD *(University of Washington) Associate Dean for Special Projects, College of Engineering; Electrical and Computer Engineering*. Professor. Optoelectronics; fabrication and modeling; fiber optic devices; nanoelectronics; nanowires.

Giuseppe R. Palmese, PhD *(University of Delaware) Department Head, Chemical and Biological Engineering*. Professor. Reacting polymer systems; nanostructured polymers; radiation processing of materials; composites and interfaces.

Ekaterina Pomerantseva, PhD *(Moscow State University, Russia)*. Assistant Professor. Solid state chemistry; electrochemical characterization, lithium-ion batteries, energy generation and storage; development and characterization of novel nanostructured materials, systems and architectures for batteries, supercapacitors and fuel cells.

Caroline L. Schauer, PhD *(SUNY Stony Brook) Graduate Advisor*. Associate Professor. Polysaccharide thin films and nanofibers.

Wan Y. Shih, PhD *(Ohio State University)*. Associate Professor. Piezoelectric microcantilever biosensors development, piezoelectric finger development, quantum dots development, tissue elasticity imaging, piezoelectric microcantilever force probes.

Wei-Heng Shih, PhD *(Ohio State University)*. Professor. Colloidal ceramics and sol-gel processing; piezoelectric biosensors, optoelectronics, and energy harvesting devices; nanocrystalline quantum dots for bioimaging, lighting, and solar cells.

Karl Sohlberg, PhD *(University of Delaware)*. Associate Professor. Chemistry Computational and theoretical materials-related chemistry: (1) complex catalytic materials; (2) mechanical and electrical molecular devices.

Jonathan E. Spanier, PhD *(Columbia University) Associate Dean, Strategic Planning, College of Engineering*. Professor. Light-matter interactions in electronic materials, including ferroelectric semiconductors, complex oxide thin film science; laster spectroscopy, including Raman scattering.

Kara Spiller, PhD *(Drexel University)*. Assistant Professor. Macrophage-biometerial interactions, drug delivery systems, and chronic would healing. Cell-biomaterial interactions, biomaterial design, and international engineering education.

Mitra Taheri, PhD *(Carnegie Mellon University) Hoeganeas Associate Professor of Metallurgy*. Associate Professor. Development of the ultrafast Dynamic Transmission Electron Microscope (DTEM) for the study of laser-induced microstructural evolution/phase transformations in nanostructured materials; use of various in-situ Transmission Electron Microscopy techniques.

Garritt Tucker, PhD *(Georgial Institute of Technology)*. Assistant Professor. Computational materials science and engineering; microstructural evolutiona nd material behavior in extreme environments; interfacial-driven processes for improving material functionality; multi-scale physics modeling.

Christopher Weinberger, PhD *(Stanford University)*. Assistant Professor. Mechanical Engineering and Mechanics Multiscale materials modeling of mechanical properties including DFT, atomistics, mesoscale and microscale FEM modeling.

Christopher Weyant, PhD *(Northwestern University)*. Associate Teaching Professor.

Margaret Wheatley, PhD *(University of Toronto) John M. Reid Professor*. Ultrasound contrast agent development (tumor targeting and triggered drug delivery), controlled release technology (bioactive compounds), microencapsulated allografts (ex vivo gene therapy) for spinal cord repair.

Antonios Zavaliangos, PhD *(Massachusetts Institute of Technology) A.W. Grosvenor Professor*. Professor. Constitutive modeling; powder compaction and sintering; pharmaceutical tableting, X-ray tomography.

Emeritus Faculty

Roger D. Corneliussen, PhD *(University of Chicago)*. Professor Emeritus. Fracture, blends and alloys, as well as compounding.

Roger D. Doherty, PhD *(Oxford University)*. Professor Emeritus. Metallurgical processing; thermo-mechanical treatment.

Ihab L. Kamel, PhD *(University of Maryland)*. Professor Emeritus. Nanotechnology, polymers, composites, biomedical applications, and materials-induced changes through plasma and high energy radiation.

Jack Keverian, PhD *(Massachusetts Institute of Technology)*. Professor Emeritus. Rapid parts manufacturing, computer integrated manufacturing systems, strip production systems, technical and/or economic modeling, melting and casting systems, recycling systems.

Alan Lawley, PhD *(University of Birmingham, England)*. Professor Emeritus. Mechanical and physical metallurgy, powder metallurgy, materials engineering design, engineering education.

Mechanical Engineering and Mechanics MSME

Major: Mechanical Engineering and Mechanics
Degree Awarded: Master of Science in Mechanical Engineering (MSME)
Calendar Type: Quarter
Minimum Required Credits: 45.0
Co-op Option: Available for full-time, on-campus master's-level students
Classification of Instructional (CIP) code: 14.1901
Standard Occupational Classification (SOC) code: 17-2141

About the Program

The mechanical engineering field is rapidly changing due to ongoing advances in modern science and technology. Effective mechanical engineers must possess expertise in mechanical engineering core subjects, interdisciplinary skills, teamwork skills, as well as entrepreneurial and managerial abilities. The degree programs are designed so students can learn the state-of-the-art knowledge now, and have the foundation to acquire new knowledge as they develop in future. The courses often associate with one or more areas of specialization: design and manufacturing, mechanics, systems and control, and thermal and fluid sciences.

The MS degree program is offered on both a full-time and a part-time basis. Graduate courses are often scheduled in the late afternoon and evening so full-time students and part-time students can take the same courses.

Full-time on-campus students who start in a fall term are eligible to take part in the Graduate Co-op Program, which combines classroom coursework with a 6-month, full-time work experience. For more information, visit the Steinbright Career Development Center's website (http://www.drexel.edu/scdc/co-op/graduate/) or visit the Drexel Engineering Graduate Co-op webpage (https://drexel.edu/engineering/academics/experiential-learning-co-op/graduate-co-ops/).

For more information please visit the MS in Mechanical Engineering webpage (https://drexel.edu/engineering/academics/graduate-programs/masters/mechanical-engineering/) or the Mechanical Engineering and Mechanics (MEM) Department (https://drexel.edu/engineering/academics/departments/mechanical-engineering/).

Admission Requirements

Applicants must meet the graduate requirements for admission to Drexel University. Students holding a bachelor's degree in a science or engineering discipline other than mechanical engineering are advised to take several undergraduate courses as preparation for graduate studies. Though these courses are not counted toward the required credits for the degree, they also must be listed in the student's plan of study. Outstanding students with a GPA of at least 3.5 in their master’s program will be considered for admission to the program leading to the Doctor of Philosophy degree in Mechanical Engineering and Mechanics.

Degree Requirements

The MS program has a two-fold mission: to prepare some students for continuation of their graduate studies and research toward a PhD degree, and to prepare other students for a career in industry upon graduation with the MS degree. The MS program has a non-thesis option and a thesis option. Students who plan to continue to the PhD degree are advised to select the thesis-option.

The MS program is structured so that students have the opportunity to specialize in areas of interest while also obtain the broadest engineering education possible. Of the required 45.0 credits (15 courses) MS students are required to complete two core-course sequences (two terms each) from two different core areas. Students can take eight technical elective courses of which up to four courses can be from outside the Mechanical Engineering and Mechanics Department if they are approved

in the students' plan of study. MS students have opportunity to apply to the optional graduate Co-op program. Students in the MS program should consult with the department graduate adviser at the beginning of their program and must file a plan of study prior to the third quarter of study. Further details can be obtained from the department's Graduate Programs Manual.

Program Requirements *		
Core Courses (select 2 courses in each of 2 Core Areas):		12.0
Core Area: Mechanics		
Subject Area: Solid Mechanics		
MEM 660	Theory of Elasticity I	
MEM 663	Continuum Mechanics	
Subject Area: Advanced Dynamics		
MEM 666	Advanced Dynamics I	
MEM 667	Advanced Dynamics II	
Core Area: Systems & Control		
Subject Area: Robust Control Systems		
MEM 633	Robust Control Systems I	
MEM 634	Robust Control Systems II	
Subject Area: Non-Linear Control Theory		
MEM 636	Theory of Nonlinear Control I	
MEM 637	Theory of Nonlinear Control II	
Core Area: Thermal & Fluid Sciences		
Subject Area: Heat Transfer		
MEM 611	Conduction Heat Transfer	
MEM 612	Convection Heat Transfer	
MEM 613	Radiation Heat Transfer	
Subject Area: Fluid Mechanics **		
MEM 621	Foundations of Fluid Mechanics	
MEM 622	Boundry Layers-Laminar & Turbulent	
Core Area: Manufacturing		
MEM 619	Microfluidics and Lab-on-a-Chip	
MEM 678	Nondestructive Evaluation Methods	
MEM 679	Data Analysis and Machine Learning for Science and Manufacturing	
MEM 687	Manufacturing Processes I	
Mathematics Courses		
MEM 591	Applied Engr Analy Methods I	3.0
Choose one of the following:		3.0
MEM 592	Applied Engr Analy Methods II	
MEM 593	Applied Engr Analy Methods III	
Technical Electives (including 9.0 credits for thesis option) ***		27.0
Optional Coop Experience †		**0-1**
COOP 500	Career Management and Professional Development for Master's Degree Students	
Total Credits		**45.0-46.0**

*****

All students take core courses in the department’s areas of specialization as part of a comprehensive and flexible program. Further details can be obtained from the department's Graduate Programs Manual (http://www.drexel.edu/mem/academics/graduate/grad-manual/).

******

Consult the Thermal and Fluid Sciences area advisor for other options.

****

Technical Electives

- Students can take all 9 electives from MEM graduate courses. At least 2 electives must be MEM Electives.
- Any MEM graduate course is eligible to serve as electives. This includes those core courses that you do not use as core courses but use as elective courses.
- This also includes MEM I699 *Independent Study and Research*, and MEM 898 *Master’s Thesis*.
- If students do not want to take all 9 elective technical courses from MEM, they may take a maximum of 7 non-MEM courses.
- Each non-MEM course to be used as technical elective needs be approved by listing it on the Plan of Study (GR-1 form) and the Graduate Advisor signing the form to approve it.
- To ensure you will receive the MSME degree, please consult with the Graduate Advisor before taking non-MEM graduate courses.
- Graduate courses at the 600- level from these four College of Engineering Departments (CAE, CBE, ECE and MSE) are automatically approved to serve as non-MEM technical elective courses.
- Students may register for MEM I699 *Independent Study and Research* (3.0 credits per term) to serve as electives, up to 9.0 credits.
- Students on the thesis-option typically register for MEM 898 *Master’s Thesis* for 3 terms, and they count as 3 elective courses.

†

Co-op is an option for this degree for full-time on-campus students. To prepare for the 6-month co-op experience, students will complete: COOP 500. The total credits required for this degree with the co-op experience is 46.0

Students not participating in the co-op experience will need 45.0 credits to graduate.

Facilities

Advanced Design and Manufacturing Laboratory
This laboratory provides research opportunities in design methodology, computer-aided design, analysis and manufacturing, and materials processing and manufacturing. Facilities include various computers and software, I-DEAS, Pro/E,ANSYS, MasterCAM, Mechanical DeskTop, SurfCAM, Euclid, Strim, ABQUS, and more.The machines include two Sanders Model Maker rapid prototyping machines, a BridgePort CNC Machining Center, a BOY 220 injection molding machine, an Electra high-temperature furnace for metal sintering, infiltration, and other heat treatment.

Biofabrication Laboratory
Utilizes cells or biologics as basic building blocks in which biological models, systems, devices and products are manufactured. Biofabrication techniques encompass a broad range of physical, chemical, biological, and/or engineering processes, with various applications in tissue science and engineering, regenerative medicine, disease parthenogenesis and drug testing studies, biochips and biosensors, cell printing, patterning and assembly, and organ printing.

The Biofabrication Lab at Drexel University integrates computer-aided tissue engineering, modern design and manufacturing, biomaterials and biology in modeling, design and biofabrication of tissue scaffolds, tissue constructs, micro-organ, tissue models. The ongoing research focuses on bio-tissue modeling, bio-blueprint modeling, scaffold informatics modeling, biomimetic design of tissue scaffold, additive manufacturing of tissue scaffolds, cell printing and organ printing.

Biological Systems Analysis Laboratory
The research in the Laboratory for Biological Systems Analysis involves the integration of biology with systems level engineering analysis and design, with an emphasis on: (1) the development of robotic systems that borrow from nature's designs and use novel technologies to achieve superior performance and function; and (2) the use of system identification techniques to evaluate the functional performance of animal physiological systems under natural, behavioral conditions. Facilities include rapid prototyping machines, compliant material manufacturing, mold making facilities, and a traditional machine shop and electronics workshop.

Biomechanics Laboratory
Emphasis in this laboratory is placed on understanding the mechanical properties of human joints, characterization of the mechanical properties of biological materials, studies of human movements, and design and development of artificial limbs. Facilities include a 3-D kinematic measuring system, Instron testing machine, and microcomputers for data acquisition and processing. Additional biomechanical laboratory facilities are available at Moss Rehab Hospital.

Combustion Diagnostics Laboratory
High-speed cameras, spectrometers, and laser systems are used to conduct research in low temperature hydrocarbon oxidation, cool flames, and plasma-assisted ignition and combustion. Research in optical diagnostic development is conducted in this lab with a specific focus on tools to measure small peroxy radicals.

Combustion, Fuel Chemistry, and Emissions Laboratory
Emphasis in this laboratory is placed on developing an understanding of both the chemical and physical factors that control and, hence, can be used to tailor combustion processes for engineering applications. Facilities include two single cylinder research engines, a pressurized flow reactor (PFR) facility, flat flame and slot burner systems, and complete analytical and monitoring instrumentation. The engine systems are used to study the effects of operating variables, fuel type, ambient conditions, and control devices on engine performance and emissions. The PFR facility is used for detailed kinetic studies of hydrocarbon pyrolysis and oxidation processes.

Complex Fluids and Multiphase Transport Laboratory
The research focus of this lab lies at the interface of thermal-fluid sciences, nano materials, and colloid and surface sciences. We apply these fundamental sciences to advance energy conversion and storage systems, to provide effective thermal management solutions, and to enable scalable additive nanomanufacturing. Facilities include materials printing systems, fluorescence microscope and imaging systems, complex fluid characterization, microfluidics and heat transfer testers, coating and solar cell testing devices, electrochemical characterization, and high performance computing facilities.

Dynamic Multifunctional Materials Laboratory
The focus of theDynamic Multifuncational Materials Laboratory (DMML) is mechanics of materials; namely fracture and failure mechanisms under extreme conditions and their correlation to meso- and microstructural characteristics. Utilizing highly integrated experimental facilities such as a Kolsky (split-Hopkinson pressure bar), single-stage, and two stage light-gas gun, complex material behavior is deconstructed into dominant time and length scales associated with the energetics of damage evolution. In-situ laser and optical diagnostics such as caustics, interferometry techniques, schlieren visualization and virtual grid method, are used to investigate coupled field properties of multifunctional materials with the goal of not only analyzing and understanding behavior, but ultimately tailoring material properties for specific applications.

Electrochemical Energy Systems Laboratory
The Electrochemical Energy Systems Laboratory (ECSL) is specializes in the design, diagnostics and characterization of next generation electrochemical energy conversion and storage systems. Current areas of research include flow-assisted supercapacitors, next generation flow battery technology and fuel cells for transportation, stationary and portable applications. ECSL utilizes a comprehensive approach, including: advanced diagnostics, system design, materials characterization, and computational modeling of electrochemical energy systems. The core mission of ECSL is to develop novel diagnostic and computational tools to understand critical issues in flow-assisted electrochemical systems and enable better system design. Due to the complex nature of these systems, our research is highly interdisciplinary and spans the interface of transport phenomena, materials characterization, electrochemistry and system engineering.

Heat Transfer Laboratory
The heat transfer laboratory is outfitted with an array of instrumentation and equipment for conducting single- and multi-phase heat transfer experiments in controlled environments. Present efforts are studying the heat and mass transfer processes in super-critical fluids and binary refrigerants.

Lab-on-a-Chip and BioMEMS Lab
Develops miniature devices for biological and medical applications using microfabrication and microfluidics technologies. Our research projects have highly multidisciplinary nature and thus require the integration of engineering, science, biology and medicine. Projects are conducted in close collaboration with biologists and medical doctors. Our research methodology includes design and fabrication of miniature devices, experimental characterization, theoretical analysis, and numerical simulation.

Microcomputer Controls Laboratory
This laboratory provides an environment conducive to appreciating aspects of systems and control through hands-on experiments. They range from data acquisition and processing to modeling of dynamical systems and implementing a variety of controllers to control systems, such as DC motors and the inverted pendulum. Active research is being conducted on control reconfiguration in the event of actuator failures in aircrafts.

Multiscale Thermofluidics Laboratory
Develops novel scalable nanomanufacturing techniques using biological templates to manipulate micro- and nano- scale thermal and fluidic phenomena. Current work includes enhancing phase-change heat transfer with super-wetting nanostructured coatings and transport and separation through nanoporous membranes.

Nyheim Plasma Institute
The Nyheim Plasma Institute (NPI) was formed in 2002 (originally the A.J. Drexel Plasma Institute) to stimulate and coordinate research projects related to plasma and other modern high-energy engineering techniques. Today the NPI is an active multidisciplinary organization involving 23 faculty members from 6 engineering departments working in close collaboration with the School of Biomedical Engineering, College of Arts and Sciences, and the College of Nursing and Health Professions.

Precision Instrumentation and Metrology Laboratory
This laboratory is focused on activities related to precision measurement, computer-aided inspection, and precision instrument design. Facilities include 3D Coordinate Measuring Machine (Brown & Sharpe) with Micro Measurement and Reverse engineering software, Surface Profilometer, and Laser Displacement Measuring System.

Space Systems Laboratory
The objective of the Space Systems Laboratory (SSL) is to inspire future generations to advance aerospace engineering. It provides research opportunities in orbital mechanics, rendezvous and docking maneuvers, mission planning, and space environment. The lab provides facilities for activities in High Altitude Balloons, construction of air-vehicles and nano-satellites, 0-g flights, and STK simulation package for satellite flights and trajectories.

Theoretical and Applied Mechanics Group
Research in the Theoretical and Applied Mechanics Group (TAMG) focuses on using experimental, analytical and computational tools to understand deformation and failure of materials, components and structures in a broad range of time and length scales. To accomplish this goal, TAMG develops procedures that include mechanical behavior characterization coupled with non-destructive testing and modern computational tools. This information is used both for understanding the role of important material scales in the observed bulk behavior and for the formulation of constitutive laws that can model the response including damage initiation and progression according to prescribed loading conditions. Equipment and facilities used by TAMG include a range of mechanical testing equipment for testing in tension, compression, fatigue and fracture.

Vascular Kinetics Laboratory
The Vascular Kinetics Laboratory (VKL) uses engineering methods to understand how biomechanics and biochemistry interact in cardiovascular disease. In particular, we study fluid flow and blood vessel stiffness impact cellular response to glucose, growth factors, and inflammation to lead to atherosclerosis and metabolic syndrome. We then apply these discoveries to novel biomaterials and therapies, with a particular focus on treating cardiovascular disease in under-served populations. This research is at the interface of engineering and medicine, with close collaborations with biologists and physicians and a strong emphasis on clinical applications.

Mechanical Engineering Faculty

Hisham Abdel-Aal, PhD *(University of North Carolina)*. Associate Teaching Professor. Bio-tribology; biomimetics and bio-inspired design; high-speed machining; metrology of biological surfaces; mechano-biology thermodynamics

Jonathan Awerbuch, DSc *(Technion, Israel Institute of Technology)*. Professor. Mechanics of composites; fracture and fatigue; impact and wave propagation; structural dynamics.

Nicholas P. Cernansky, PhD *(University of California-Berkeley) Hess Chair Professor of Combustion*. Professor. Combustion chemistry and kinetics; combustion generated pollution; utilization of alternative and synthetic fuels.

Bor-Chin Chang, PhD *(Rice University)*. Professor. Computer-aided design of multivariable control systems; robust and optimal control systems.

Richard Chiou, PhD *(Georgia Institute of Technology)*. Associate Professor. Green manufacturing, mechatronics, Internet-based robotics and automation, and remote sensors and monitoring.

Young I. Cho, PhD *(University of Illinois-Chicago)*. Professor. Heat transfer; fluid mechanics; non-Newtonian flows; biofluid mechanics; rheology.

Alisa Clyne, PhD *(Harvard-Massachusetts Institute of Technology)*. Associate Professor. Cardiovascular biomechanics.

Bakhtier Farouk, PhD *(University of Delaware) Billings Professor of Mechanical Engineering*. Professor. Heat transfer; combustion; numerical methods; turbulence modeling; materials processing.

Alexander Fridman, DSc, PhD *(Moscow Institute of Physics and Technology) Mechanical Engineering and Mechanics, John A. Nyheim Endowed University Chair Professor, Director of the Drexel Plasma Institute*. Professor. Plasma science and technology; pollutant mitigation; super-adiabatic combustion; nanotechnology and manufacturing.

Michael Glaser, MFA *(Ohio State University) Program Director for Product Design*. Associate Professor. Westphal College of Media Arts & Design Quantifying the designer's intuition; the interplay between digital and physical forms; human desire to shape our surroundings.

Li-Hsin Han, PhD *(University of Texas at Austin)*. Assistant Professor. Polymeric, micro/nano-fabrication, biomaterial design, tissue engineering, rapid prototyping, free-form fabrication, polymer micro actuators, photonics

Ani Hsieh, PhD *(University of Pennsylvania)*. Associate Professor. Multi-robot systems, decentralized and distributed control, bio-inspired control, swarm robotics.

Y. Grace Hsuan, PhD *(Imperial College)*. Professor. Durability of polymeric construction materials; advanced construction materials; and performance of geosynthetics.

Andrei Jablokow, PhD *(University of Wisconsin, Madison) Associate Department Head for Undergraduate Affairs, Mechanical Engineering and Mechanics*. Associate Teaching Professor. Kinematics; geometric modeling.

Antonios Kontsos, PhD *(Rice University)*. Associate Professor. Applied mechanics; probabilistic engineering mechanics; modeling of smart multifunctional materials.

E. Caglan Kumbur, PhD *(Pennsylvania State University)*. Associate Professor. Mechanical Engineering and Mechanics Next generation energy technologies; fuel cell design and development.

John Lacontora, PhD *(New Jersey Institute of Technology)*. Associate Research Professor. Service engineering; industrial engineering.

Leslie Lamberson, PhD *(California Institute of Technology) P.C. Chou Assistant Professor of Mechanical Angineering*. Assistant Professor. Dynamic behavior of materials, dynamic fracture, damage micromechanics, active materials.

Alan Lau, PhD *(Massachusetts Institute of Technology) Associate Department Head for Graduate Affairs, Mechanical Engineering and Mechanics*. Professor. Deformation and fracture of nano-devices and macroscopic structures; damage-tolerant structures and microstructures.

Michele Marcolongo, PhD, PE *(University of Pennsylvania) Department Head*. Professor. Orthopedic biomaterials; acellular regenerative medicine, biomimetic proteoglycans; hydrogels.

Matthew McCarthy, PhD *(Columbia University)*. Assistant Professor. Micro- and nanoscale thermofluidic systems, bio-inspired cooling, smart materials and structures for self-regulated two-phase cooling, novel architectures for integrated energy conversion and storage.

David L. Miller, PhD *(Louisiana State University) Department Head, Mechanical Engineering and Mechanics*. Professor. Gas-phase reaction kinetics; thermodynamics; biofuels.

Hongseok (Moses) Noh, PhD *(Georgia Institute of Technology)*. Associate Professor. MEMS; BioMEMS; lab-on-a-chip; microfabrication; microfluidics.

Mira S. Olson, PhD *(University of Virginia) Graduate Studies Advisor*. Associate Professor. Environmental remediation; contaminant and bacterial transport in porous media and bacterial response to dynamic environments.

William C. Regli, PhD *(University of Maryland-College Park)*. Professor. Artificial intelligence; computer graphics; engineering design and Internet computing.

Sorin Siegler, PhD *(Drexel University)*. Professor. Orthopedic biomechanics; robotics; dynamics and control of human motion; applied mechanics.

Jonathan E. Spanier, PhD *(Columbia University) Associate Dean, Strategic Planning, College of Engineering*. Professor. Light-matter interactions in electronic materials, including ferroelectric semiconductors, complex oxide thin film science; laster spectroscopy, including Raman scattering.

Wei Sun, PhD *(Drexel University) Albert Soffa Chair Professor of Mechanical Engineering*. Professor. Computer-aided tissue engineering; solid freeform fabrication; CAD/CAM; design and modeling of nanodevices.

Ying Sun, PhD *(University of Iowa)*. Associate Professor. Transport processes in multi-component systems with fluid flow; heat and mass transfer; phase change; pattern formation.

Tein-Min Tan, PhD *(Purdue University)*. Associate Professor. Mechanics of composites; computational mechanics and finite-elements methods; structural dynamics.

James Tangorra, PhD *(Massachusetts Institute of Technology)*. Associate Professor. Analysis of human and (other) animal physiological systems; head-neck dynamics and control; balance, vision, and the vestibular system; animal swimming and flight; robotics; system identification; bio-inspired design.

Christopher Weinberger, PhD *(Stanford University)*. Assistant Professor. Mechanical Engineering and Mechanics Multiscale materials

modeling of mechanical properties including DFT, atomistics, mesoscale and microscale FEM modeling.

Ajmal Yousuff, PhD *(Purdue University)*. Associate Professor. Optimal control; flexible structures; model and control simplifications.

Jack G. Zhou, PhD *(New Jersey Institute of Technology)*. Professor. CAD/CAM; computer integrated manufacturing systems; rapid prototyping; system dynamics and automatic control.

Emeritus Faculty

Leon Y. Bahar, PhD *(Lehigh University)*. Professor Emeritus. Analytical methods in engineering, coupled thermoelasticity, interaction between analytical dynamics and control systems.

Gordon D. Moskowitz, PhD *(Princeton University)*. Professor Emeritus. Biomechanics, dynamics, design, applied mathematics.

Donald H. Thomas, PhD *(Case Institute of Technology)*. Professor Emeritus. Biocontrol theory, biomechanics, fluidics and fluid control, vehicle dynamics, engineering design.

Albert S. Wang, PhD *(University of Delaware) Albert and Harriet Soffa Professor*. Professor Emeritus. Treatment of damage evolution processes in multi-phased high-temperature materials, including ceramics and ceramic-matrix composites.

Mechanical Engineering and Mechanics PhD

Major: Mechanical Engineering and Mechanics
Degree Awarded: Doctor of Philosophy (PhD)
Calendar Type: Quarter
Minimum Required Credits: 90.0
Co-op Option: None
Classification of Instructional (CIP) code: 14.1901
Standard Occupational Classification (SOC) code: 17-2141

About the Program

The PhD degree offered by the Mechanical Engineering and Mechanics (MEM) Department (https://drexel.edu/engineering/academics/departments/mechanical-engineering/) offers courses often associated with one or more areas of specialization: design and manufacturing, mechanics, systems and control, and thermal and fluid sciences. The mechanical engineering field is rapidly changing due to ongoing advances in modern science and technology. Effective mechanical engineers must possess expertise in mechanical engineering core subjects, interdisciplinary skills, teamwork skills, as well as entrepreneurial and managerial abilities. The degree programs are designed so students can learn the state-of-the-art knowledge now, and have the foundation to acquire new knowledge as they develop in future.

The PhD degree program is offered for full-time students only and is a research intensive program. The research areas include, but are not limited to, bio-engineering, energy systems, high performance materials, nanotechnology, plasma science and engineering and robotics.

For more information, please visit the PhD in Mechanical Engineering (https://drexel.edu/engineering/academics/graduate-programs/doctoral/mechanical-engineering/) webpage.

Admission Requirements

Applicants must meet the graduate requirements for admission to Drexel University. Students holding a bachelor's degree in a science or engineering discipline other than mechanical engineering are advised to take several undergraduate courses as preparation for graduate studies. Though these courses are not counted toward the required credits for the degree, they also must be listed in the student's plan of study. Outstanding students with a GPA of at least 3.5 in their master’s program will be considered for admission to the program leading to the Doctor of Philosophy degree in Mechanical Engineering and Mechanics.

Degree Requirements

Outstanding students with a GPA of at least 3.5 in their master’s program will be considered for admission to the program leading to the Doctor of Philosophy degree in Mechanical Engineering and Mechanics.

PhD Program Requirements

Candidacy Requirements

The PhD candidacy exam consists of two parts: a course examination part and an oral examination part.

- For the course examination part, an earned grade of A- or higher on 2 courses from the MEM Selected Core Course list is required. These 2 courses should be from a two-course sequence (or any two of a three-course sequence, such as MEM 611 / MEM 612 / MEM 613) in (1) Mechanics, (2) Thermal and Fluid Sciences, and/or (3) Dynamic Systems and Controls Cores. Note that grades earned in (4) Design and Manufacturing Courses cannot be the basis for fulfilling this requirement. However, completion of MEM 619, MEM 687, MEM 678 and MEM 679 may be counted towards the core courses.
- For the oral examination part, the research component examination consists of a written report and an oral presentation. The Candidacy Committee selects three or more research papers in the student’s declared research area for student to conduct a critical review and identify areas for future research and development. In three weeks after the papers have been assigned to the student, the student submits a written report not exceeding 15 single-spaced pages, excluding references. One week after the written report is submitted the student makes an oral presentation. The presentation is followed by questions by the Committee. The goals of the questions are to evaluate the student’s knowledge in the scientific fields related to the research area, including related background and fundamental material, and to assess the student’s ability to integrate information germane to success in research.

The candidacy may be completed at any time following matriculation but must be attempted no later than the end of the second academic year, for full-time students, and successfully completed not later than the end of the third academic year, for full-time students. The composition of the Candidacy Committee should be selected with the approval of the Program Manager of Graduate Studies. Special circumstances should also be discussed with the Program Manager.

Students Entering with MS degree in Mechanical Engineering from Drexel University

PhD Tailored Requirements †	**36.0**
Technical Electives	

Electives Approved by Program Manager of Graduate Studies and Student's Thesis Advisor		
MEM 998	Ph.D. Dissertation	9.0-144.0
Total Credits		**45.0-180.0**

†
Because the nature of the research is wide ranging and instruction should be selected to be tailored to the needs of the students, the student must determine the number and selection of courses in a Plan of Study. This plan should encompass the total number of required credit hours. Both the Program Manager of Graduate Studies and the student's thesis supervisor must approve this plan.

*
All students take core courses in the department's areas of specialization as part of a comprehensive and flexible program. Further details can be obtained from the department's Graduate Program Manual (http://www.drexel.edu/mem/academics/graduate/grad-manual/).

**
Consult the Thermal and Fluid Sciences area advisor for other options.

***
MEM Graduate Courses

- Students must take 18 MEM course credits (6 courses). Among these credits, 2 courses must be selected from MEM Core Course list and must be in one of the two-course sequences.
- Any MEM graduate course is eligible to serve as MEM courses. This includes those core courses that you do not use as core courses but use as elective courses.
- This also includes MEM I699 *Independent Study and Research.*
- Graduate courses at the 600- level from these four College of Engineering Departments (CAE, CBE, ECE and MSE) are automatically approved to serve as non-MEM technical elective courses.
- Students may register for MEM I699 *Independent Study and Research* (3.0 credits per term) to serve as electives, up to 9.0 credits.

Facilities

Nanobiomaterials and Cell Engineering Laboratory
This laboratory contains a fume hood with vacuum/gas dual manifold, vacuum pump and rotary evaporator for general organic/ polymer synthesis; gel electrophoresis and electroblotting for protein characterization; bath sonicator, glass homogenizer and mini-extruder for nanoparticle preparation; centrifuge; ultrapure water conditioning system; precision balance; pH meter and shaker.

Ceramics Processing Laboratory
This laboratory contains a photo-resist spinner, impedance analyzer, Zeta potential meter, spectrafluorometer, piezoelectric d33 meter, wire-bonder, and laser displacement meter.

Layered Solids Laboratory
This laboratory contains a vacuum hot-press; creep testers, Ar-atmosphere glove-box, high-speed saw, and assorted high temperature furnaces; metallographic preparation facilities; high temperature closed-loop servo-hydraulic testing machines.

Mechanical Testing Laboratory
This laboratory contains mechanical and closed-loop servo-hydraulic testing machines, hardness testers, Charpy and Izod impact testers, equipment for fatigue testing, metallographic preparation facilities and a rolling mill with twin 6" diameter rolls.

Macromolecular Materials Laboratory
This laboratory contains a hybrid rheometer, inert environment glove box, size exclusion chromatography with multi-angle laser light scattering, HPLC and RI detector & MALS, centrifuge, rotovapor, and vacuum oven used for developing innovative synthetic platforms to generate functional soft materials with complex macromolecular architectures.

Mesoscale Materials Laboratory
This laboratory contains instrumentation for growth, characterization, device fabrication, and design and simulation of electronic, dielectric, ferroelectric and photonic materials. Resources include physical and chemical vapor deposition and thermal and plasma processing of thin films, including oxides and metals, and semiconductor nanowire growth. Facilities include pulsed laser deposition, atomic layer deposition (ALD), chemical vapor deposition (CVD), sublimation growth, and resistive thermal evaporation. Variable-temperature high-vacuum probe station and optical cryostats including high magnetic field, fixed and tunable-wavelength laser sources, several monochromators for luminescence and Raman scattering spectroscopy, scanning electron microscopy with electron beam lithography, and a scanning probe microscope.

Nanomaterials Laboratory
This laboratory contains instrumentation for synthesizing, testing and manipulation of nanomaterials carbon and two dimensional carbides under microscope, high-temperature autoclaves, Sievert's apparatus; glove-boxes; high-temperature vacuum and other furnaces for the synthesis of nano-carbon coatings and nanotubes; tube furnaces for synthesis of carbides and nitrides; potentiostat/galvanostat for electrochemical testings; ultraviolet-visible (UV-VIS) spectrophotometry; Raman spectrometers; Differential scanning calorimeter (DSC) and thermogravimetric analyzer (TGA) up to 1500 °C with mass spectrometer, Zeta potential analyzer; attrition mill, bath and probe sonicators, centrifuges; electro-spinning system for producing nano-fibers.

Functional Inorganic Materials Synthesis Laboratory
The laboratory contains equipment for the synthesis of inorganic and hybrid materials, including gas cabinets for NH_3 and H_2, a CVD furnace, and spin-coater; UV-Vis spectrophotometer; and a photodegradation test station with Xe 1000 W lamp.

Films and Heterostructures Laboratory
This laboratory contains an oxide molecular beam epitaxy (MBE) thin film deposition system; physical properties measurement system (PPMS) for electronic transport and magnetometry measurements from 2 to 400 K, up to 9 T fields; 2 tube furnaces; spectroscopic ellipsometer.

Powder Processing Laboratory
This laboratory contains vee blenders, ball-mills, sieve shaker + sieves for powder classification, several furnaces.

Soft Matter Research and Polymer Processing Laboratories
These laboratories contain computerized thermal analysis facilities including differential scanning calorimeters (DSC), dynamic mechanical analyzer (DMA) and thermo-gravimetric analyzer (TGA); tabletop tensile tester; strip biaxial tensile tester; vacuum evaporator; spin coater; centrifuge; optical microscope with hot stage; liquid crystal tester; microbalance; ultrasonic cleaner; laser holographic fabrication system; polymer injection molder and single screw extruder.

Natural Polymers and Photonics Laboratory
This laboratory contains a high purity liquid chromatography (HPLC) system; refractometer; electro-spinning and touch-spinning systems for producing nanofibers.

X-ray Tomography Laboratory
This laboratory contains a high resolution X-ray micro-tomography instrument and a cluster of computers for 3D microstructure reconstruction; mechanical stage, a positioning stage and a cryostage for *in-situ* testing.

MSE Undergraduate Teaching Laboratory
Contains an FTIR spectrometer, metallographic sample preparation, equipment, polymer 3D printers, polymer extruder and injection molder, Vickers hardness tester, inverted metallograph, multiple furnaces.

Materials Characterization Core (MCC)
The Department of Materials Science & Engineering relies on the Materials Characterization Core facilities within the University for materials characterization and micro- and nano-fabrication. These facilities contain a number of state-of-the-art materials characterization instruments, including high resolution and variable pressure field-emission scanning electron microscopes (SEMs) with Energy Dispersive Spectroscopy (EDS) for elemental analysis, Orientation Image Microscopy (OIM) for texture analysis, various *in-situ* and *in-operando* stages (cryo mat, heating, tensile, 3- and 4-point bending, and electrochemistry); two Transmission Electron Microscopes (TEMs) with STEM capability and TEM sample preparation equipment; a dual-beam focused ion beam (FIB) system for nano-characterization and nano fabrication; a Nanoindenter; an X-ray Photoelectron Spectrometer (XPS)/Electron Spectroscopy for Chemical Analysis (ESCA) system; X-Ray Diffractometers (XRD); and an X-ray microscope (NanoCT) with an *in-situ* tensile/compression temperature controlled stage.

More details of these instruments, information on how to access them, and instrument usage rates can be found at Drexel University's Materials Characterization Core webpage.

Program Level Outcomes

- Demonstrate the ability to conduct independent research on a timely topic of modern Mechanical Engineering.
- Acquire a broader and deeper knowledge in the student's sub-discipline/field of specialization.
- Demonstrate the ability to express research content and findings orally and in writing.
- Demonstrate an understanding of the relationship of their work to published literature.
- Demonstrate the ability to interact effectively with colleagues.
- Demonstrate the ability to utilize experimental, theoretical, and computational tools for one's research.

Mechanical Engineering Faculty

Hisham Abdel-Aal, PhD *(University of North Carolina)*. Associate Teaching Professor. Bio-tribology; biomimetics and bio-inspired design; high-speed machining; metrology of biological surfaces; mechano-biology thermodynamics

Jonathan Awerbuch, DSc *(Technion, Israel Institute of Technology)*. Professor. Mechanics of composites; fracture and fatigue; impact and wave propagation; structural dynamics.

Nicholas P. Cernansky, PhD *(University of California-Berkeley) Hess Chair Professor of Combustion*. Professor. Combustion chemistry and kinetics; combustion generated pollution; utilization of alternative and synthetic fuels.

Bor-Chin Chang, PhD *(Rice University)*. Professor. Computer-aided design of multivariable control systems; robust and optimal control systems.

Richard Chiou, PhD *(Georgia Institute of Technology)*. Associate Professor. Green manufacturing, mechatronics, Internet-based robotics and automation, and remote sensors and monitoring.

Young I. Cho, PhD *(University of Illinois-Chicago)*. Professor. Heat transfer; fluid mechanics; non-Newtonian flows; biofluid mechanics; rheology.

Alisa Clyne, PhD *(Harvard-Massachusetts Institute of Technology)*. Associate Professor. Cardiovascular biomechanics.

Bakhtier Farouk, PhD *(University of Delaware) Billings Professor of Mechanical Engineering*. Professor. Heat transfer; combustion; numerical methods; turbulence modeling; materials processing.

Alexander Fridman, DSc, PhD *(Moscow Institute of Physics and Technology) Mechanical Engineering and Mechanics, John A. Nyheim Endowed University Chair Professor, Director of the Drexel Plasma Institute*. Professor. Plasma science and technology; pollutant mitigation; super-adiabatic combustion; nanotechnology and manufacturing.

Michael Glaser, MFA *(Ohio State University) Program Director for Product Design*. Associate Professor. Westphal College of Media Arts & Design Quantifying the designer's intuition; the interplay between digital and physical forms; human desire to shape our surroundings.

Li-Hsin Han, PhD *(University of Texas at Austin)*. Assistant Professor. Polymeric, micro/nano-fabrication, biomaterial design, tissue engineering, rapid prototyping, free-form fabrication, polymer micro actuators, photonics

Ani Hsieh, PhD *(University of Pennsylvania)*. Associate Professor. Multi-robot systems, decentralized and distributed control, bio-inspired control, swarm robotics.

Y. Grace Hsuan, PhD *(Imperial College)*. Professor. Durability of polymeric construction materials; advanced construction materials; and performance of geosynthetics.

Andrei Jablokow, PhD *(University of Wisconsin, Madison) Associate Department Head for Undergraduate Affairs, Mechanical Engineering and Mechanics*. Associate Teaching Professor. Kinematics; geometric modeling.

Antonios Kontsos, PhD *(Rice University)*. Associate Professor. Applied mechanics; probabilistic engineering mechanics; modeling of smart multifunctional materials.

E. Caglan Kumbur, PhD *(Pennsylvania State University)*. Associate Professor. Mechanical Engineering and Mechanics Next generation energy technologies; fuel cell design and development.

John Lacontora, PhD *(New Jersey Institute of Technology)*. Associate Research Professor. Service engineering; industrial engineering.

Leslie Lamberson, PhD *(California Institute of Technology) P.C. Chou Assistant Professor of Mechanical Angineering*. Assistant Professor. Dynamic behavior of materials, dynamic fracture, damage micromechanics, active materials.

Alan Lau, PhD *(Massachusetts Institute of Technology) Associate Department Head for Graduate Affairs, Mechanical Engineering and Mechanics*. Professor. Deformation and fracture of nano-devices and macroscopic structures; damage-tolerant structures and microstructures.

Michele Marcolongo, PhD, PE *(University of Pennsylvania) Department Head*. Professor. Orthopedic biomaterials; acellular regenerative medicine, biomimetic proteoglycans; hydrogels.

Matthew McCarthy, PhD *(Columbia University)*. Assistant Professor. Micro- and nanoscale thermofluidic systems, bio-inspired cooling, smart materials and structures for self-regulated two-phase cooling, novel architectures for integrated energy conversion and storage.

David L. Miller, PhD *(Louisiana State University) Department Head, Mechanical Engineering and Mechanics*. Professor. Gas-phase reaction kinetics; thermodynamics; biofuels.

Hongseok (Moses) Noh, PhD *(Georgia Institute of Technology)*. Associate Professor. MEMS; BioMEMS; lab-on-a-chip; microfabrication; microfluidics.

Mira S. Olson, PhD *(University of Virginia) Graduate Studies Advisor*. Associate Professor. Environmental remediation; contaminant and bacterial transport in porous media and bacterial response to dynamic environments.

William C. Regli, PhD *(University of Maryland-College Park)*. Professor. Artificial intelligence; computer graphics; engineering design and Internet computing.

Sorin Siegler, PhD *(Drexel University)*. Professor. Orthopedic biomechanics; robotics; dynamics and control of human motion; applied mechanics.

Jonathan E. Spanier, PhD *(Columbia University) Associate Dean, Strategic Planning, College of Engineering*. Professor. Light-matter interactions in electronic materials, including ferroelectric semiconductors, complex oxide thin film science; laster spectroscopy, including Raman scattering.

Wei Sun, PhD *(Drexel University) Albert Soffa Chair Professor of Mechanical Engineering*. Professor. Computer-aided tissue engineering; solid freeform fabrication; CAD/CAM; design and modeling of nanodevices.

Ying Sun, PhD *(University of Iowa)*. Associate Professor. Transport processes in multi-component systems with fluid flow; heat and mass transfer; phase change; pattern formation.

Tein-Min Tan, PhD *(Purdue University)*. Associate Professor. Mechanics of composites; computational mechanics and finite-elements methods; structural dynamics.

James Tangorra, PhD *(Massachusetts Institute of Technology)*. Associate Professor. Analysis of human and (other) animal physiological systems; head-neck dynamics and control; balance, vision, and the vestibular system; animal swimming and flight; robotics; system identification; bio-inspired design.

Christopher Weinberger, PhD *(Stanford University)*. Assistant Professor. Mechanical Engineering and Mechanics Multiscale materials modeling of mechanical properties including DFT, atomistics, mesoscale and microscale FEM modeling.

Ajmal Yousuff, PhD *(Purdue University)*. Associate Professor. Optimal control; flexible structures; model and control simplifications.

Jack G. Zhou, PhD *(New Jersey Institute of Technology)*. Professor. CAD/CAM; computer integrated manufacturing systems; rapid prototyping; system dynamics and automatic control.

Emeritus Faculty

Leon Y. Bahar, PhD *(Lehigh University)*. Professor Emeritus. Analytical methods in engineering, coupled thermoelasticity, interaction between analytical dynamics and control systems.

Gordon D. Moskowitz, PhD *(Princeton University)*. Professor Emeritus. Biomechanics, dynamics, design, applied mathematics.

Donald H. Thomas, PhD *(Case Institute of Technology)*. Professor Emeritus. Biocontrol theory, biomechanics, fluidics and fluid control, vehicle dynamics, engineering design.

Albert S. Wang, PhD *(University of Delaware) Albert and Harriet Soffa Professor*. Professor Emeritus. Treatment of damage evolution processes in multi-phased high-temperature materials, including ceramics and ceramic-matrix composites.

Robotics and Autonomy MS

Major: Robotics and Autonomy
Degree Awarded: Master of Science (MS)
Calendar Type: Quarter
Minimum Required Credits: 45.0
Co-op Option: Available for full-time, on-campus master's-level students
Classification of Instructional Programs (CIP) code: 14.4201
Standard Occupational Classification (SOC) code: 11-9041

About the Program

The Master of Science in Robotics and Autonomy at Drexel University is an interdisciplinary program designed to prepare professionals for leadership roles in the research, development, and design of robotic systems and technologies. Offered through the Electrical and Computer Engineering department in conjunction with the Mechanical Engineering Department, the program addresses the rapid advancements in robotics and their applications across industries.

The curriculum is built around four foundational concepts of robotics:

- Perception: Gathering data from the robot's surroundings.
- Cognition: Processing data to understand the environment.
- Control: Making decisions based on environmental information.
- Action: Executing decisions through movement and interaction with the physical world.

The degree requires a minimum of 45.0 approved credits. The curriculum is customizable, with students developing their plan of study in consultation with their academic advisor. This program is ideal for those aiming to advance their careers in robotics or autonomy-related fields while addressing critical challenges through innovative robotic applications. Students will develop:

- Expertise in machine learning and robotics fundamentals.
- Skills for designing, building, programming, deploying, and evaluating robotic systems.
- Critical thinking and creativity to innovate solutions for societal and industrial challenges.
- Proficiency in integrating industry-leading tools for automation and robotics.

Graduates are equipped to impact many critical areas of society and industry, from medicine and healthcare to large retailers, and incorporation of Industry 4.0, advanced manufacturing, and the Internet of Things. The program also provides a strong foundation for entrepreneurial ventures or further academic pursuits.

Students also have the option to engage in research under the supervision of a faculty member. A total of 9.0 credits of research-oriented coursework may be counted towards the minimum credit hour requirement of the degree program. These credits are considered general electives.

The MS program is designed so that a student may complete the degree requirements in less than 2 years of full-time study or 2-3 years of part-time study.

Full-time on-campus students who start in a fall term are eligible to take part in the Graduate Co-op Program, which combines classroom coursework with a 6-month, full-time work experience. For more information, visit the Steinbright Career Development Center's website (http://www.drexel.edu/scdc/co-op/graduate/) or visit the Drexel Engineering Graduate Co-op webpage (https://drexel.edu/engineering/academics/experiential-learning-co-op/graduate-co-ops/).

Additional Information

For more information visit the MS in Robotics and Autonomy program (https://drexel.edu/engineering/academics/graduate-programs/masters/robotics-autonomy/) and the Electrical and Computer Engineering Department (https://drexel.edu/engineering/academics/departments/electrical-computer-engineering/) website.

Admission Requirements

Applicants must satisfy general requirements for graduate admission including a minimum 3.0 GPA (on a 4.0 scale) for the last two years of undergraduate studies, as well as for any subsequent graduate work, and hold a bachelor's degree in an engineering discipline from an accredited college or university. Preferred bachelor's programs include electrical engineering, computer engineering, mechanical engineering, and computer science. An undergraduate degree earned abroad must be deemed equivalent to a US bachelor's.

The GRE general test is optional for all applicants. TOEFL, IELTS, PTE, or Duolingo is required if the language of instruction of your previous degree was not English.

For additional information on how to apply and deadlines, visit the College of Engineering's Admission Guidelines (https://drexel.edu/engineering/admissions/graduate/admission-guidelines/) or Drexel's admissions page for Robotics and Autonomy (https://drexel.edu/academics/grad-professional-programs/engineering/robotics-and-autonomy/).

Degree Requirements

Foundation Courses		
Choose 2 courses in mathematics and/or signal processing		6.0
Mathematics		
Any MATH 500-700 level course [*]		
ECES 510	Analytical Methods in Systems	
ECES 521	Probability & Random Variables	
MEM 591	Applied Engr Analy Methods I	
MEM 592	Applied Engr Analy Methods II	
MEM 593	Applied Engr Analy Methods III	
Signal Processing		
ECES 522	Random Process & Spectral Analysis	
ECES 523	Detection & Estimation Theory	
ECES 604	Optimal Estimation & Stochastic Control	
ECES 631	Fundamentals of Deterministic Digital Signal Processing	
ECES 640	Genomic Signal Processing	
ECES 641	Bioinformatics	
Systems Courses		
Choose 2 courses in robotics and autonomy from the perspective of full systems or use		6.0
ECE 600	Applied Robotics Laboratory	
ECE 603	Computing and Control	
ECE 608	Decision-Making for Robotics	
ECE 610	Machine Learning & Artificial Intelligence	
ECE 612	Applied Machine Learning Engineering	
ECES 511	Fundamentals of Systems I	
ECES 512	Fundamentals of Systems II	
ECES 513	Fundamentals of Systems III	
ECES 561	Medical Robotics I	
ECES 562	Medical Robotics II	
MEM 571	Introduction to Robot Technology	
MEM 572	Mechanics of Robot Manipulators	
MEM 573	Industrial Application of Robots	
Core Components		
Take 1 course in each of the four disciplines critical to robotics		
Perception		3.0
ECE 609	Mobile Sensing and Motion Planning	
ECE 687	Pattern Recognition	
ECES 681	Fundamentals of Computer Vision	
ECES 682	Fundamentals of Image Processing	
ECET 512	Wireless Systems	
ECET T580	Special Topics in Telecommunications	
MEM 678	Nondestructive Evaluation Methods	
Cognition and Behavior		3.0
ECE 610	Machine Learning & Artificial Intelligence	
ECE 612	Applied Machine Learning Engineering	
ECE 617	Reinforcement Learning	
ECE 686	Cell & Tissue Image Analysis	
ECES 604	Optimal Estimation & Stochastic Control	
ECES 631	Fundamentals of Deterministic Digital Signal Processing	
Action		3.0
ECE 609	Mobile Sensing and Motion Planning	
ECE 617	Reinforcement Learning	
ECES 511	Fundamentals of Systems I	
ECES 512	Fundamentals of Systems II	
ECES 513	Fundamentals of Systems III	
MEM 530	Aircraft Flight Dynamics & Control I	
MEM 666	Advanced Dynamics I	
MEM 667	Advanced Dynamics II	
MEM 668	Advanced Dynamics III	
Control		3.0
ECE 603	Computing and Control	
ECE 612	Applied Machine Learning Engineering	
ECES 604	Optimal Estimation & Stochastic Control	
ECES 642	Optimal Control	
MEM 633	Robust Control Systems I	
MEM 634	Robust Control Systems II	
MEM 635	Robust Control Systems III	
MEM 636	Theory of Nonlinear Control I	
MEM 637	Theory of Nonlinear Control II	
MEM 638	Theory of Nonlinear Control III	
MEM 733	Applied Optimal Control I	
MEM 734	Applied Optimal Control II	
MEM 735	Advanced Topics in Optimal Control	
Technical Focus Areas		
Take 3 courses from the Core Components areas or Systems area listed above		9.0
Elective Courses [**]		
6.0 credits at the 500-700 level from the College of Engineering or other approved subject areas.		6.0
Mastery		
Thesis Option: Students will complete two terms (3.0 credits per term; 6.0 total credits) of ECE 898, which is laboratory-based research that leads to a publicly defended MS thesis. Students will be advised by a faculty member, and when applicable, a representative of industry or government sponsor.		6.0
Non-thesis Option: In lieu of research and a thesis, students will complete 6.0 credits of coursework from the Aligned Mathematical Theory, Applications, or Signal Processing areas.		
Optional Co-op Experience [***]		**0-1**
COOP 500	Career Management and Professional Development for Master's Degree Students	
Total Credits		**45.0-46.0**

*****

Recommended MATH courses include MATH 510, MATH 521, MATH 631, and MATH 630."

**

Electives include 15.0 credits at the 500-900 level in the following subject areas: ECE, ECEC, ECEE, ECEP, ECES, ECET, AE, BIO, BMES, CHE, CHEM, CIVE, CMGT, CS, EGMT, ENGR, ENTP, ENVE, ET, MATE, MATH, MEM, MGMT, MIS, OPR, PHYS, PROJ, or SYSE

***

Co-op is an option for this degree for full-time on-campus students.
To prepare for the 6-month co-op experience, students will complete: COOP 500. The total credits required for this degree with the co-op experience is 46.0
Students not participating in the co-op experience will need 45.0 credits to graduate.

Vince and Judy Vidas Program in Systems Engineering MSSYSE

Major: Systems Engineering
Degree Awarded: Master of Science in Systems Engineering (MSSYSE)
Calendar Type: Quarter
Minimum Required Credits: 45.0
Co-op Option: Available for full-time, on-campus master's-level students
Classification of Instructional Programs (CIP) code: 14.2701
Standard Occupational Classification (SOC) code: 17-2199

What is Systems Engineering?

Fundamentally, the function of systems engineering is to guide the engineering development of complex systems, or in some cases, new technology. Systems engineering is:

- A set of process, principles, fundamentals and tools, and often includes a cultural aspect, to guide the design of complicated systems.
- An emphasis on the total operation of the system -- necessitating a thorough understanding of requirements for operation and performance.
- Involves defining the system as functional relationships in the early conceptual stages of the process.
- Includes a rigorous analysis of alternatives to assure optimal system design in later stages.
- An integration of subsystem and emerging technology to develop a system that satisfies the defined requirements.

Systems Engineering involves the ability to think within the context of incorporation and understanding of the system linkages and interactions and between the subsystems and components that comprise the entirety of the system.

About the Program

The Master of Science in Systems Engineering is an interdisciplinary curriculum which integrates systems thinking, the ability to understand the complete system and the ability to execute the systems engineering process. The degree provide skills to enable systems development throughout the entire life-cycle, from conceptual development and engineering design through the operation and sustainment phases.

A master's degree in systems engineering is an excellent complement to any engineering or STEM bachelor's degree. The program continues with the Drexel College of Engineering tradition by preparing students to be successful in their careers. Study can be on a part-time or full-time basis, and the program is available both online and on campus.

Drexel's MS in Systems Engineering is certified by the International Council on Systems Engineering (INCOSE) (https://www.incose.org/), and is one of only a few programs in the world to hold this distinction. Graduates will automatically qualify for a Systems Engineering Professional (SEP) Certification from INCOSE without having to take the certification exam.

The MS Systems Engineering curriculum will do the following:

- Include models relevant to sustainable, high performance systems as they relate to effective systems engineering
- Expose students to Model-Based Systems Engineering (MBSE) using SysML and also covering major aspects of the systems domain
- Teach systems engineering processes and skills to integrate user needs, manage requirements, conduct technological evaluation, build elaborate system architectures, assess risk and establish financial and schedule constraints
- Prepare students to intelligently manage and contribute to any engineering challenge, including concept development, technology assessment, architecture selection, and proposal development. The courses stimulate and challenge students as they consider

sustainability-oriented projects and become serious systems engineering managers and practitioners

Program Outcomes

Graduates of the Drexel University Master of Science in Systems Engineering will be competent in their ability to:

- Develop and implement models and tools to enhance and optimize complex systems.
- Formulate and manage processes relevant to complex systems development.
- Design, implement, integrate, verify, validate, support and decommission systems.
- Use systems engineering tools and practices to identify and execute effective technical solutions.
- Develop system architectures (physical, structural, behavioral, etc) to represent systems design and development.
- Manage system-intensive projects within cost and schedule constraints.

Certificate Option

Students may complete a Graduate (p. 102)Certificate in Systems Engineering (p. 102) as a standalone pursuit or as a gateway to the full Master of Science in Systems Engineering. Students can apply certificate course credits toward completion of a Master's in Systems Engineering.

Additional Information

For more information, visit the MS in Systems Engineering (https://drexel.edu/engineering/academics/graduate-programs/masters/systems-engineering/) program or contact us here (https://drexel.edu/engineering/admissions/graduate/contact-us/).

Admission Requirements

Degree and GPA Requirement

A bachelor's degree in an Engineering discipline from an ABET-accredited college or university is required. A bachelor's degree in science (Physics, Mathematics, Computer Science, etc.) may also be acceptable. An undergraduate degree earned abroad must be deemed equivalent to a U.S. bachelor's degree. A minimum 3.0 GPA (on a 4.0 scale) for a bachelor's degree as well as for any subsequent graduate-level work is required.

TOEFL Requirement

For students whose native language is not English and who do not hold a degree from a US institution, the Test of English as a Foreign Language (TOEFL) is required. TOEFL scores must be less than two years old to be considered. Minimum total score of 90 (internet-based). Official documents of this exam must be submitted directly to the Graduate Admissions Office. Unofficial photocopies will not be accepted.

Other Requirements

- Submission of an application
- Official, sealed college transcripts
- An essay
- Two or more letters of recommendation

Note, interested students can apply for admission to this program in any term (Fall, Winter, Spring and Summer) as there is rolling admission throughout the year. However, students attending full time cannot apply for admission in the summer term. Full time students can apply for all other terms (Fall, Winter and Spring). This summer term restriction does not apply to part time / online students. These students can apply for admission in any term (Fall, Winter, Spring and Summer).

Degree Requirements

Students may take their required elective credits from any graduate-level course(s) in engineering, business, or another college for which they have adequate preparation and can obtain approvals from the college and the systems engineering program.

All candidates are encouraged to discuss areas of interest with the program advisor and to develop a proposed plan of study during the early stages of the program.

Note: Specific course requirements may be waived for students who have taken equivalent courses elsewhere.

Core Courses (30 Credits)		
Systems Engineering Process		
SYSE 520	Global Sustainment and Integrated Logistics	3.0
SYSE 533	Systems Integration and Test	3.0
SYSE 682	Introduction to Systems Science	3.0
SYSE 685	Systems Engineering Management	3.0
Systems Engineering Analysis		
SYSE 640	Model Based Systems Engineering	3.0
SYSE 688	Systems Engineering Analysis	3.0
Data Analytics and Modeling		
EGMT 572	Statistical Data Analysis *	3.0
EGMT 573	Operations Research	3.0
SYSE 690	Modeling, Simulation and Other Tools	3.0
Systems Engineering Capstone		
SYSE 598	Capstone in Systems Engineering	3.0
Electives (15 Credits) **		**15.0**
Complete any five of the following electives: **		
Engineering Statistics Elective *		
EGMT 571	Engineering Statistics *	
Systems Design & Development Electives		
SYSE 530	Systems Engineering Design	
SYSE 531	Systems Architecture Development	
SYSE 532	Software Systems Engineering	
SYSE 650	Transition of the Integrated System from Design to Production	
Systems Reliability & Logistics Electives		
SYSE 522	Engineering Supply Chain Systems	
SYSE 524	Systems Reliability, Availability & Maintainability Analysis	
SYSE 525	Statistical Modeling & Experimental Design	
EGMT 575	Quality Systems Engineering	
Systems Engineering Leadership Electives		
EGMT 501	Leading and Managing Technical Workers	
EGMT 635	Visual System Mapping	
EGMT 650	Systems Thinking for Leaders	
SYSE 521	Integrated Risk Management	
Power Systems & Energy Electives		
ECEP 501	Power System Analysis	
ECEP 502	Computer Analysis of Power Systems	
ECEP 503	Synchronous Machine Modeling	
ECEP 610	Power System Dynamics	
ECEP 611	Power System Security	
Machine Learning & Artificial Intellgence Electives		
ECE 610	Machine Learning & Artificial Intelligence	
ECE 612	Applied Machine Learning Engineering	

ECE 687	Pattern Recognition	
ECES 521	Probability & Random Variables	
Other Approved Electives		
EGMT 504	Design Thinking for Engineering Communications	
EGMT 531	Engineering Economic Evaluation & Analysis	
EGMT 535	Financial Management	
EGMT 610	Ethics & Business Practices for Engineers	
EGMT 615	New Product Conceptualization, Justification, and Implementation	
EGMT 616	Value Creation through New Product Development	
EGMT 620	Engineering Project Management	
EGMT 625	Project Planning, Scheduling and Control	
EGMT 630	Global Engineering Project Management	
EGMT 645	Managing Engineering Disasters	
EGMT 652	Engineering Law	
SYSE 898	Master's Thesis in Systems Engineering ***	
Optional Co-op Experience †		**0-1**
COOP 500	Career Management and Professional Development for Master's Degree Students	
Total Credits		**45.0-46.0**

*****

EGMT 572 requires EGMT 571 as a prerequisite or a waiver must be approved by the program administration if the student has previously taken a undergraduate or graduate statistics course. Otherwise, students will need to take EGMT 571 as one of their electives.

******

Students may select electives from other disciplines outside of Engineering Management with prior approval from their advisor.

****

If a student decides to pursue the Master's Thesis option, the student will complete the 30 core credits, 6 elective credits, and nine thesis credits. Advisor/Director consultation and approval is required if a student is interested in waiving core courses when pursuing the Master's Thesis option.

†

Co-op is an option for this degree for full-time on-campus students.
To prepare for the 6-month co-op experience, students will complete: COOP 500. The total credits required for this degree with the co-op experience is 46.0
Students not participating in the co-op experience will need 45.0 credits to graduate.

Dual Degree Programs

Students with a previously completed master's degree at Drexel may pursue a second master's degree in a different major without the need to go through the admission process again or to complete another 45.0 credits of graduate coursework. Up to 15.0 credits from the first master's may be transferred into the second master's degree program, enabling students to complete the second master's degree with a minimum of 30.0 new graduate credits.

Career Opportunities

The MS in Systems Engineering prepares students to become effective systems engineers, leaders, managers, and future executives. With a systems engineering background, students are able to tackle a wide array of engineering challenges from the entire systems life cycle, including concept development, technology assessment, architecture selection, and proposal development.

Systems engineers are highly valued in industry because their skills complement those in traditional engineering fields. Whereas other engineering disciplines usually focus deeply in only one area, systems engineers must integrate all of those areas into a comprehensive and effective system. This is a versatile skill-set that allows for a flexible career path, as systems engineering expertise is sought by a wide range of industries such as healthcare, defense, communications, aerospace, government, transportation, finance, and more. Drexel University's MS Systems Engineering will prepare students from any of these fields to lead large, complex projects in their organizations.

Program Level Outcomes

Upon completion of the program, graduates will be prepared to:

- Develop and implement models and tools to enhance and optimize complex systems.
- Develop and manage processes relevant to complex systems development.
- Design, implement, integrate, verify, validate, support and decommission complex systems.
- Use systems engineering tools and practices to identify and execute effective technical solutions.
- Develop System Architectures (physical, structural, behavioral, etc.) to represent systems design and development.
- Manage system-intensive projects within cost and schedule constraints.

Systems Engineering Faculty

Richard Grandrino, MBA *(Drexel University)*. Teaching Faculty. Manager for advanced logistics operations at Lockheed Martin

Steven Mastro, PhD *(Drexel University)*. Adjunct Faculty. Machinery Research and Silencing Division of NAVSEA Philadelphia. Work focuses on advanced sensor and control technologies for condition-based maintenance, damage control, and automation.

Miray Pereira, MBA *(Rutgers University)*. Adjunct Instructor. Manages a team of consultants responsible for development, facilitation and implementation of fundamental demand management systems and capabilities for DuPont, most recently with the DuPont Safety & Protection Platform in strategic planning, mergers & acquisitions.

Walter Sobkiw, BS *(Drexel University)*. Adjunct Faculty. Author of "Systems Engineering Design Renaissance" and "Systems Practices as Common Sense."

Fernando Tovia, PhD *(University of Arkansas)*. Adjunct Instructor. Core quantitative analysis,strategic planning, supply chain management and manufacturing systems.

John Via, DEngr *(Southern Methodist University) Director of Engineering Management; Associate Dean for Online Programs*. Teaching Professor.

Graduate Minor in Computational Engineering

About the Graduate Minor

The graduate minor in Computational Engineering gives students pursuing a technical graduate degree an opportunity to develop core computational and mathematical competencies to complement their master's degree coursework.

Successful completion of the minor requires that students take five courses (15.0 credits). At least three courses must come from the three core subject areas; the student must take at least one course in each of the three core subject areas. The remaining two courses may be either core courses or elective courses.

The distinction between core and elective courses is that core courses are intended to be accessible to any College of Engineering graduate student without prerequisites. Elective courses, on the other hand, may require additional prerequisites and may be suitable only for students in certain academic disciplines or with certain academic backgrounds.

Additional Information

For more information, please contact us (https://drexel.edu/engineering/admissions/graduate/contact-us/) at the Department of Electrical and Computer Engineering (https://drexel.edu/engineering/academics/departments/electrical-computer-engineering/).

Program Requirements

Programming, Data Structures, Algorithms Requirement		
Complete 1 of the following courses:		3.0
BMES 550	Advanced Biocomputational Languages	
CS 502	Data Structures and Algorithms	
CS 503	Systems Basics	
CS 521	Data Structures and Algorithms I	
CS 540	High Performance Computing	
CS 550	Programming Languages	
SE 575	Software Design	
SE 576	Software Reliability and Testing	
Numerical Methods, Linear Algebra, Modeling and Simulation, Optimization Requirement		
Complete 1 of the following courses:		3.0
BMES 672	Biosimulation I	
CHE 626	Transport Phenomena II	
ECES 811	Optimization Methods for Engineering Design	
ENVE 681	Analytical and Numerical Techniques in Hydrology	
MATE 535	Numerical Engineering Methods	
MATH 504	Linear Algebra & Matrix Analysis	
MATH 520	Numerical Analysis I	
MATH 521	Numerical Analysis II	
MATH 540	Numerical Computing	
MEM 591	Applied Engr Analy Methods I	
MEM 681	Finite Element Methods I	
MEM 711	Computational Fluid Mechanics and Heat Transfer I	
OPR 620	Operations Research I	
OPR 624	Advanced Mathematical Program	
OPR 922	Operations Research Methods I	
OPR 992	Applied Math Programming	
Probability, Statistics, Machine Learning Requirement		
Complete 1 of the following courses:		3.0
BMES 510	Biomedical Statistics	
CS 510	Introduction to Artificial Intelligence	
ECEC T680	Special Topics in Electrical & Computer Engineering - Computers (Pattern Recognition)	
ECES 521	Probability & Random Variables	
EGMT 571	Engineering Statistics	
ENVE 727	Risk Assessment	
ENVE 750	Data-based Engineering Modeling	
MATH 510	Applied Probability and Statistics I	
STAT 601	Business Statistics	
STAT 610	Statistics for Business Analytics	
STAT 924	Multivariate Analysis I	
STAT 931	Statistics for Economics	
STAT 932	Statistics for Behavioral Science	
Additional Elective Courses		
Complete 2 courses from the following list (or any 2 courses from the above lists):		6.0
AE 551	Building Energy Systems I	
BMES 517	Intermediate Biostatistics	
BMES 518	Interpretation of Biomedical Data	
BMES 673	Biosimulation II	
BST 551	Statistical Inference I	
BST 558	Applied Multivariate Analysis	
BST 701	Advanced Statistical Computing	
CS 522	Data Structures and Algorithms II	
CS 610	Advanced Artificial Intelligence	
CS 613	Machine Learning	
CS 621	Approximation Algorithms	
CS 623	Computational Geometry	
CS 630	Cognitive Systems	
CS 650	Program Generation and Optimization	
CS 676	Parallel Programming	
ECEC 622	Parallel Programming	
ECES 522	Random Process & Spectral Analysis	
ECES 523	Detection & Estimation Theory	
EGMT 572	Statistical Data Analysis	
EGMT 573	Operations Research	
MATH 511	Applied Probability and Statistics II	
MATH 512	Applied Probability and Statistics III	
MATH 522	Numerical Analysis III	
MEM 592	Applied Engr Analy Methods II	
MEM 593	Applied Engr Analy Methods III	
MEM 682	Finite Element Methods II	
MEM 712	Computational Fluid Mechanics and Heat Transfer II	
OPR 601	Managerial Decision Models and Simulation	
OPR 622	Operations Research II	
OPR 626	System Simulation	
OPR 924	Operations Research Methods II	
OPR 991	Simulation Theory and Applications	
STAT 628	Applied Regression Analysis	
STAT 630	Multivariate Analysis	
Total Credits		**15.0**

Post-Baccalaureate Certificate in Construction Management

Certificate Level: Graduate
Admission Requirements: Bachelor's degree
Certificate Type: Post-Baccalaureate
Number of Credits to Completion: 18.0
Instructional Delivery: Online
Calendar Type: Quarter
Expected Time to Completion: 2 years
Financial Aid Eligibility: Not aid eligible
Classification of Instructional Program (CIP) Code: 52.2001
Standard Occupational Classification (SOC) Code: 11-9021

About the Program

The certificate in Construction Management program teaches professionals the multidisciplinary skills required of effective senior construction managers. The program produces industry leaders that exhibit strong technical and managerial skills, apply scientific methodologies to problem solving, are critical thinkers, exercise creativity, and inject innovation into the process.

Students have the option of completing this 18.0 credit certificate in construction management as a standalone professional development credential, or as a credential earned in a step toward the MS in Construction Management program (https://drexel.edu/engineering/academics/graduate-programs/masters/construction-management/).

Admission Requirements

The admissions process for this program is the same as for the MS in Construction Management (https://drexel.edu/engineering/academics/graduate-programs/masters/construction-management/).

Program Requirements

Requirements		
CMGT 510	Construction Control Techniques	3.0
CMGT 512	Cost Estimating and Bidding Strategies	3.0
CMGT 515	Risk Management in Construction	3.0
CMGT 525	Applied Construction Project Management	3.0
CMGT 528	Construction Contract Administration	3.0
CMGT 538	Strategic Management in Construction	3.0
Total Credits		**18.0**

Additional Information

For more information, view the College of Engineering's Construction Management (https://drexel.edu/engineering/academics/departments/construction-engineering-project-management-systems-engineering/academic-programs/undergraduate/construction-management/) webpage or contact us here (https://drexel.edu/engineering/admissions/graduate/contact-us/).

Post-Baccalaureate Certificate in Engineering Management

Certificate Level: Graduate
Admissions Requirements: Undergraduate degree in engineering or the sciences
Certificate Type: Post-Baccalaureate
Number of Credits to Completion: 15.0
Instructional Delivery: Online
Calendar Type: Quarter
Expected Time to Completion: 1 year
Financial Aid Eligibility: Not aid eligible
Classification of Instructional Program (CIP) Code: 15.1501
Standard Occupational Classification (SOC) Code: 11-9040

About the Program

This program is a superb training ground for engineers and scientists who want to obtain a solid foundation in leadership as well as critical areas in management, communications, economics, and finance without having to commit to the entire graduate program. After completing the program, students have the option of applying the earned credits toward a master's degree in engineering management.

Courses completed in this certificate program can be applied towards earning a masters in Engineering Management (https://catalog.drexel.edu/graduate/collegeofengineering/engineeringmanagement/) and/or most other master degree programs within the College of Engineering.

Continuing master's students pursuing other technical disciplines may also complete the certificate courses as electives with approval from their advisor (e.g., electrical engineering master's students may complete these four courses to satisfy four of their five elective requirements).

Admission Requirements

Visit Drexel Engineering Graduate Admissions Guidelines (https://drexel.edu/engineering/admissions/graduate/admission-guidelines/) for details about requirements. Note, interested students can apply for admission to this program in any term (Fall, Winter, Spring and Summer).

For more information about this certificate, visit the College of Engineering certificates (https://drexel.edu/engineering/academics/graduate-programs/certificates/) web page.

Program Requirements

Required Courses		
EGMT 501	Leading and Managing Technical Workers	3.0
EGMT 504	Design Thinking for Engineering Communications	3.0
EGMT 531	Engineering Economic Evaluation & Analysis	3.0
EGMT 535	Financial Management	3.0
Electives (Choose One)		**3.0**
EGMT 502	Analysis and Decision Methods for Technical Managers	
EGMT 536	Advanced Financial Management for Engineers	
EGMT 614	Marketing: Identifying Customer Needs	
EGMT 620	Engineering Project Management	
SYSE 685	Systems Engineering Management	
Total Credits		**15.0**

Sample Plan of Study

First Year

Fall	Credits	Winter	Credits	Spring	Credits	Summer	Credits

Post-Baccalaureate Certificate in Engineering Technical Leadership

Certificate Level: Graduate
Admissions Requirements: Bachelor's degree
Certificate Type: Post-Baccalaureate
Minimum Number of Credits to Completion: 18.0
Instructional Delivery: Online
Calendar Type: Quarter
Expected Time to Completion: 1.5 years
Financial Aid Eligibility: Not aid eligible
Classification of Instructional Program (CIP) Code: 15.1501
Standard Occupational Classification (SOC) Code: 17-2112

About the Program

The Engineering Technical Leadership Graduate Certificate is designed to enhance the skills of engineers and technical personnel desiring or holding leadership positions in variety of industries, such as the Department of Defense (DoD) and associated contractors, manufacturing, biomedical, urban development, transportation, etc. It is specifically geared to enhance leadership skills for plant managers, general managers, technical directors, program managers, functional engineering managers and anyone in an engineering leadership role or position. In today's environment, managing the complexity of human and capital resources is a tremendous challenge. This certificate provides formalized training and education in leadership that is "hands-on" and application oriented, focused to teach skills, concepts and methodologies associated with the leadership domain.

Courses completed in this certificate program can be applied to a master's in Engineering Management (https://catalog.drexel.edu/graduate/collegeofengineering/engineeringmanagement/) or Systems Engineering (https://catalog.drexel.edu/graduate/collegeofengineering/systemsengineering/) and/or most other master degree programs within the College of Engineering.

Note: Students that are interested in the International Council on Systems Engineering (INCOSE) Systems Engineering Professional (SEP) certification should take SYSE 688 (Systems Engineering Analysis) as an elective course. Completion of two courses (SYSE 685 and SYSE 688) is required for INCOSE SEP certification. For more information about this certification refer to INCOSE SEP Certificatio (https://nam10.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.incose.org%2Fcertification%2Fbecoming-certified&data=05%7C02%7Crag28%40drexel.edu%7Cc8471637ac39404a7a4808dc5d8c5d49%7C3664e6fa47bd45a696708c4f080f8ca6%7C0%7C0%7C638488104642682196%7CUnknown%7CTWFpbGZsb3d8eyJWIjoiMC4wLjAwMDAiLCJQIjoiV2luMzIiLCJBTiI6Ik1haWwiLCJXVCI6Mn0%3D%7C0%7C%7C%7C&sdata=ii6IJlld3Bv%2Bu2DaA%2FQaTCgfI4ieRXyV9k7fG6mAzRM%3D&reserved=0)n

Admission Requirements

Visit Drexel Engineering Graduate Admissions Guidelines (https://drexel.edu/engineering/admissions/graduate/admission-guidelines/) for details about requirements. Note, interested students can apply for admission to this program in any term (Fall, Winter, Spring and Summer).

Additional Information

For more information about this certificate, visit the College of Engineering certificates (https://drexel.edu/engineering/academics/graduate-programs/certificates/) web page.

Program Requirements

EGMT 501	Leading and Managing Technical Workers	3.0
EGMT 502	Analysis and Decision Methods for Technical Managers	3.0
EGMT 650	Systems Thinking for Leaders	3.0
SYSE 685	Systems Engineering Management	3.0
Technical Elective 1 *		3.0
Technical Elective 2 *		3.0
Total Credits		**18.0**

*

Technical Elective courses must be graduate level 500, 600 or 700 level courses from the following: AE, CHE, CIVE, CMGT, ECE, ECEC, ECEP, ECES, EET, EGMT, ENGR, ENVE, MATE, MEM, SYSE

Sample Plan of Study

First Year

Technical Elective courses must be graduate level 500, 600 or 700 level courses from the following: AE, CHE, CIVE, CMGT, ECE, ECEC, ECEP, ECES, EET, EGMT, ENGR, ENVE, MATE, MEM, SYSE

Post-Baccalaureate Certificate in Hardware Systems Engineering

Certificate Level: Graduate
Admissions Requirements: Bachelor's degree
Certificate Type: Post-Baccalaureate
Minimum Number of Credits to Completion: 12.0
Instructional Delivery: Online; Face-to-face
Calendar Type: Quarter
Expected Time to Completion: 1 years
Financial Aid Eligibility: Not aid eligible
Classification of Instructional Program (CIP) Code: 14.2701
Standard Occupational Classification (SOC) Code: 11-9041

About the Program

This graduate certificate will enhance the skills of engineers who work in areas of product design and development related to a variety of industries, but most relevant to Department of Defense (DoD) and related industries. In today's environment, managing the complexity of hardware product development requires technical knowledge and know-how, as well as system engineering approaches with a focus on the product development

lifecycle process. This graduate certificate program will leverage this competency to provide systems engineering thinking paired with technical depth in product development and design. This pairing will enhance the skill set and talent of engineers who work in the field of hardware product design and development.

Courses completed in this certificate program can be applied to a Master of Science in (https://catalog.drexel.edu/graduate/collegeofengineering/systemsengineering/)Systems Engineering (https://catalog.drexel.edu/graduate/collegeofengineering/systemsengineering/?_gl=1*19jjol3*_ga*NjUyMzQyMzYyLjE2OTUzMjQ5NzA.*_ga_6KJ1PNLE19*MTcxODM3NDI4OS4zOTIuMS4xNzE4Mzc1NicwLjU4LjAuMA..) and / or most other master degree programs within the College of Engineering.

Note students that are interested in the International Council on Systems Engineering (INCOSE) Systems Engineering Professional (SEP) certification should take SYSE 685 (Systems Engineering Management) and SYSE 688 (Systems Engineering Analysis) as their required and elective courses. Completion of these two courses (SYSE 685 and SYSE 688) is required for INCOSE SEP certification. For more information about this certification refer to INCOSE SEP Certification (https://nam10.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.incose.org%2Fcertification%2Fbecoming-certified&data=05%7C02%7Crag28%40drexel.edu%7Cc8471637ac39404a7a4808dc5d8c5d49%7C3664e6fa47bd45a696708c4f080f8ca6%7C0%7C0%7C638488104642682196%7CUnknown%7CTWFpbGZsb3d8eyJWIjoiMC4wLjAwMDAiLCJQIjoiV2luMzIiLCJBTiI6Ik1haWwiLCJXVCI6Mn0%3D%7C0%7C%7C%7C&sdata=ii6IJlld3Bv%2Bu2DaA%2FQaTCgfI4ieRXyV9k7fG6mAzRM%3D&reserved=0). (https://www.incose.org/certification/becoming-certifiedhttps://www.incose.org/certification/becoming-certified/)

Admission Requirements

Visit Drexel Engineering Graduate Admissions Guidelines (https://drexel.edu/engineering/admissions/graduate/admission-guidelines/) for details about requirements. Note, interested students can apply for admission to this program in any term (Fall, Winter, Spring and Summer).

For more information about this certificate, visit the College of Engineering certificates (https://drexel.edu/engineering/academics/graduate-programs/certificates/) web page.

Program Requirements

SYSE 533	Systems Integration and Test	3.0
SYSE 650	Transition of the Integrated System from Design to Production	3.0
SYSE 685	Systems Engineering Management	3.0
or SYSE 688	Systems Engineering Analysis	
Technical Elective *		3.0
Total Credits		**12.0**

*****

The Technical Elective course must be a graduate level course (500, 600 or 700 series) from ECE, ECEC, ECEE, ECEP, ECES, ECET, ENGR, ET, MATE, MEM, SYSE

Additional Information

To learn more about the certificate or to apply for admission, please visit the Systems Engineering (https://drexel.edu/engineering/academics/departments/engineering-leadership-society/academic-programs/systems-engineering/) (https://drexel.edu/engineering/academics/departments/construction-engineering-project-management-systems-engineering/academic-programs/graduate/engineering-management/certificate/)program page.

Post-Baccalaureate Certificate in Naval Engineering

Certificate Level: Graduate
Admission Requirements: Bachelor's degree
Certificate Type: Post-Baccalaureate
Number of Credits to Completion: 12.0
Instructional Delivery: Online
Calendar Type: Quarter
Expected Time to Completion: 1 year
Financial Aid Eligibility: Not aid eligible
Classification of Instructional Program (CIP) Code: 14.2201
Standard Occupational Classification (SOC) Code: 11-9041

About the Program

The Post-Baccalaureate Certificate in Naval Engineering is designed for engineers from any discipline who work with the development, design, construction, operation, maintenance, or logistic support of US Naval ships and shipboard systems. Students will gain an overall view of shipboard engineering plants as well as learn to understand the basic design and operating principles of the propulsion, hull, mechanical, electrical (HM&E) systems, and auxiliary systems of today's naval forces. Students will also learn the Department of Defense approach to systems engineering as applied to naval operations.

Upon completion of the certificate, students will be able to apply these learned principles and techniques to their jobs and ascertain success within their industry. The certificate is designed for naval engineers and practitioners at any level who desire to broaden their skills and increase their knowledge of naval engineering systems and principles.

Courses completed in this certificate program can be applied to a masters in systems engineering (https://catalog.drexel.edu/graduate/collegeofengineering/systemsengineering/) and / or most other master degree programs within the College of Engineering.

Admission Requirements

A bachelor's degree in an engineering discipline from an ABET-accredited college or university is required. A bachelor's degree in the sciences (physics, mathematics, computer science, etc.) may also be acceptable. Applicants with degrees in the sciences may be required to take a number of undergraduate or post-baccalaureate courses. An undergraduate degree earned abroad must be deemed equivalent to a US bachelor's degree. A minimum 3.0 GPA (on a 4.0 scale) for a bachelor's degree as well as for any subsequent graduate-level work is required.

Visit Drexel Engineering Graduate Admissions Guidelines (https://drexel.edu/engineering/admissions/graduate/admission-guidelines/) for more details about requirements. Note, interested students can apply for admission to this program in any term (Fall, Winter, Spring and Summer).

For more information about this certificate, visit the College of Engineering certificates (https://drexel.edu/engineering/academics/graduate-programs/certificates/) web page.

Post-Baccalaureate Certificate in Peace Engineering

Certificate Level: Graduate
Admission Requirements: Bachelor's degree
Certificate Type: Post-Baccalaureate
Number of Credits to Completion: 9.0
Instructional Delivery: Online
Calendar Type: Quarter
Expected Time to Completion: 1 year
Financial Aid Eligibility: Not aid eligible
Classification of Instructional Program (CIP) Code: 14.2701
Standard Occupational Classification (SOC) Code: 11-9041

About the Program

The Peace Engineering certificate will introduce students to the field of Peace Engineering and train students to develop systems-level analysis skills that are critical to the field's practice. The certificate program was designed in response to requests from federal and academic institutions for Drexel University to provide technical training in Peace Engineering without requiring a BS in Engineering or full-time enrollment at Drexel.

Courses for the certificate are selected from the first-year courses used in the Peace Engineering MS program and are appropriate for anyone with a bachelor's degree in an applied or social science, or with appropriate work experience. The certificate will be made available to other colleges and universities for use as a minor so that students can learn about Peace Engineering without the parent university having to begin a dedicated program.

Admission Requirements

Bachelor's degree in an applied or social science, or appropriate work experience.

For more information about this certificate, visit the College of Engineering certificates (https://drexel.edu/engineering/academics/graduate-programs/certificates/) web page.

Program Requirements

Post-Baccalaureate Certificate in Power Systems Engineering

Certificate Level: Graduate
Admission Requirements: Bachelor's degree in electrical engineering
Certificate Type: Graduate Certificate
Number of Credits to Completion: 24.0
Instructional Delivery: Online
Calendar Type: Quarter
Expected Time to Completion: 2 years
Financial Aid Eligibility: Not aid eligible
Classification of Instructional Program (CIP) Code: 14.4801
Standard Occupational Classification (SOC) Code: 11-9041

About the Program

The objective of this certificate is to provide students/professionals with the knowledge to support related technical project including electrification, de-carbonation, and aging equipment retirement expansion. This program will prepare students/engineers to be equipped with the technical knowledge and to meet the needs of utility corporations to retain existing employees, to develop professionals in meeting the new rising technical challenges, and to attract new, young professionals to join the challenging workforce.

Admission Requirements

Students should have a bachelor's degree in electrical engineering with the necessary pre-requisites. Student's without a bachelor's degree in electrical engineering would require coursework exposure to circuits (i.e., RLC circuits, nodal analysis phasors) and linear algebra (i.e., vector and matrix computation). Visit the College of Engineering Graduate Admissions Guidelines (https://drexel.edu/engineering/admissions/graduate/admission-guidelines/) for more information.

For More Information

Visit the College of Engineering Certificates Programs web page (https://drexel.edu/engineering/academics/graduate-programs/certificates/).

Degree Requirements

Required Courses:		
ECEP 501	Power System Analysis	3.0
ECEP 502	Computer Analysis of Power Systems	3.0
ECEP 601	Modeling & Analysis of Power Distribution Systems	3.0
ECEP 602	Power Distribution Automation and Control	3.0
ECEP 641	Protective Relaying	3.0
ECEP 642	Protective Relay Laboratory	3.0
ECEP 671	AC-DC and DC-AC Power Electronic Converters	3.0
Technical Electives *		
Select one from the list below:		3.0
ECEP 503	Synchronous Machine Modeling	
ECEP 603	Service and Power Quality in Distribution Systems	
ECEP 612	Economic Operation of Power Systems	
ECEP 643	Solid State Protective Relaying	
ECEP 672	Power Electronic Experiments: Hardware and Software	
ECEP 673	Power Electronic Applications	
ECEP 821	Load Forecasting & Probability Methods	
ECEP T580	Special Topics in Electrical & Computer Engineering - Power Engineering	
Total Credits		**24.0**

*

Select a course from the list below or any ECE department course with advisor approval.

Post-Baccalaureate Certificate in Real Estate

Certificate Level: Graduate
Admission Requirements: Bachelor's degree
Certificate Type: Post-Baccalaureate
Number of Credits to Completion: 18.0
Instructional Delivery: Online
Calendar Type: Quarter
Expected Time to Completion: 2 years
Financial Aid Eligibility: Not aid eligible
Classification of Instructional Program (CIP) Code: 52.1501
Standard Occupational Classification (SOC) Code: 11-9141

About the Program

Note: Coursework is still available to students in other degree programs, but this program is no longer accepting applications.

Students should consider the MS in Construction Management (p. 36) with a focus in Real Estate.
This graduate certificate seeks to produce professionals with the knowledge, skills, and perspective required to be successful in the real estate development process and the industry as a whole. Students explore the knowledge and skills required to create, maintain, and build environments for living, working, and entertainment purposes.

Relevant issues include project finance, real estate as investments, design and construction, operations, development law, environmental remediation, public policy, market analysis, and architecture.

Program Requirements

Requirements		
REAL 568	Real Estate Development	3.0
REAL 571	Advanced Real Estate Investment & Analysis	3.0
REAL 572	Advanced Market Research & Analysis	3.0
REAL 575	Real Estate Finance	3.0
REAL 577	Legal Issues in Real Estate Development	3.0
Select one of the following:		**3.0**
REAL 573	Sales & Marketing of Real Estate	
REAL 574	Real Estate Economics in Urban Markets	
REAL 576	Real Estate Valuation & Analysis	
Total Credits		**18.0**

Post-Baccalaureate Certificate in Spectrum Defense

Certificate Level: Graduate
Admissions Requirements:Bachelor's degree
Certificate Type: Post-Baccalaureate
Number of Credits to Completion: 18.0
Instructional Delivery: Online
Calendar Type: Quarter
Expected Time to Completion: 2 years
Financial Aid Eligibility: Not aid eligible
Classification of Instructional Program (CIP) Code: 29.0207
Standard Occupational Classification (SOC) Code: 11-9041

About the Program

The graduate certificate program in Spectrum Defense will train students in the fundamentals of wireless radio frequency (RF) communications with applications in communications, radar, and adversarial open channel dynamics. The design and operation of systems using advanced radio, transceiver, signal, control, microwave, and wireless technologies requires technical knowledge of new capabilities and, critically, the ability to act rapidly for both offensive and defensive tactical solutions.

This program provides a deep understanding of the foundations in spectrum electronic components in areas such as radar, wireless

communications, and probability. Students will take core classes in probability, radar, electronic warfare, and experimental wireless communications. Two elective courses are provided to allow the students to learn more about RF electronics, signal processing, or radio propagation.

Admission Requirements

Students with a bachelor's degree in engineering with a cumulative undergraduate GPA of 3.0 should have the necessary pre-requisites. However, relevant field experience will also be taken into account in the application review process. Students applying to the program will be required to submit an online application, submit transcript(s) and resume to qualify for acceptance and subsequent enrollment into each respective graduate program. Visit the College of Engineering Graduate Admissions Guidelines (https://drexel.edu/engineering/admissions/graduate/admission-guidelines/) for more information.

For More Information

Visit the College of Engineering Certificates Programs web page (https://drexel.edu/engineering/academics/graduate-programs/certificates/).

Program Requirements

Required Courses		
ECE 513	Introduction to Radar	3.0
ECE 514	Basic Electronic Warfare Concepts	3.0
ECE 630	Software Defined Radio Laboratory	3.0
ECES 521	Probability & Random Variables	3.0
Technical Electives *		
Select two from the list below:		6.0
ECEE 518	Microwave Passive Components	
ECEE 519	Microwave Active Subsystems	
ECES 631	Fundamentals of Deterministic Digital Signal Processing	
ECET 512	Wireless Systems	
Any ECE (Electrical & Computer Engineering) 500-699 courses *		
Any ECEC (Electrical & Computer Engineering - Computers) 500-699 courses *		
Any ECEE (Electrical & Computer Engineering-Electroph) 500-699 courses *		
Any ECEP (Electrical & Computer Engineering - Power Engineering) 500-699 courses *		
Any ECES (Electrical & Computer Engineering - Systems) 500-699 courses *		
Any ECET (Telecommunications) 500-699 courses *		
Total Credits		**18.0**

*

Advisor approval required

Sample Plan of Study

First Year				
Fall	**Credits**	**Winter**	**Credits**	**Spring**
ECE 513	3.0	ECES 521	3.0	ECE 630
	3		**3**	
Second Year				
Fall	**Credits**	**Winter**	**Credits**	
Technical Elective	3.0	Technical Elective	3.0	
	3		**3**	
Total Credits 18				

Summer	**Credits**	**Fall**
ECE 514	3.0	
	3	

Additional Information

Post-Baccalaureate Certificate in Sustainability and Green Construction

Certificate Level: Graduate
Admission Requirements: Bachelor's degree
Certificate Type: Post-Baccalaureate
Number of Credits to Completion: 15.0
Instructional Delivery: Online
Calendar Type: Quarter
Expected Time to Completion: 1 year
Financial Aid Eligibility: Not aid eligible
Classification of Instructional Program (CIP) Code: 52.2001
Standard Occupational Classification (SOC) Code: 11-9021

About the Program

This program is no longer accepting applications, however the coursework is offered through the MS in Construction Management (https://catalog.drexel.edu/graduate/collegeofengineering/constructionmanagement/).

The architectural, engineering, and construction community faces the daunting task of providing a built environment which is in harmony with the natural environment—meeting the current needs of society without jeopardizing the ability of future generations to meet their needs. Sustainable development means integrating the decision-making process across the project team, so that every decision is made with an eye to the greatest long-term benefits.

The certificate in Sustainability and Green Construction is a flexible, part-time post-baccalaureate program, focused on the sustainable aspects of the construction process. Students have the opportunity to complete all requirements within one and a half years.

Currently, in the Leadership in Energy and Environmental Design (LEED) green building rating system, the construction process represents a significant portion of the effort required to achieve high performance building programs. This certificate program is intended to explore these concepts in detail. Credits from this certificate will transfer toward a Master of Science in Construction Management.

Program Requirements

Requirements		
CMGT 535	Community Impact Analysis	3.0
CMGT 545	Sustainable Principles & Practices	3.0
CMGT 546	Sustainable Technologies	3.0
CMGT 547	LEED Concepts	3.0
CMGT 558	Community Sustainability	3.0
Total Credits		**15.0**

Post-Baccalaureate Certificate in Systems Engineering

Certificate Level: Graduate
Admission Requirements: Bachelor's degree in engineering or other science
Certificate Type: Graduate Certificate
Number of Credits to Completion: 12.0
Instructional Delivery: Online
Calendar Type: Quarter
Expected Time to Completion: 1 years
Financial Aid Eligibility: Not aid eligible
Classification of Instructional Program (CIP) Code: 14.2701
Standard Occupational Classification (SOC) Code: 17-2199

About the Program

The Graduate Certificate in Systems Engineering teaches students the process and art of systems engineering. Students learn systems engineering tools and skills to integrate user needs, manage requirements, conduct technological evaluation, and build elaborate system architectures. The courses devote particular attention to knowledge, skills, mindset, and leadership qualities needed to be a successful systems engineering leader in the field.

This graduate certificate is certified by the International Council on Systems Engineering (INCOSE), and it is one of only several curricula in the world to hold this distinction. Graduates will automatically qualify for the CSEP (Certified Systems Engineering Professional) or ASEP (Associate Systems Engineering Professional) without having to take the certification exam. For more information about this certification, refer to INCOSE SEP Certification (https://www.incose.org/certification/).

Any students working or interested in the field of systems engineering should consider pursuing and completing this certificate.

Courses completed in this certificate program can be applied to earning the Master of Science in S (https://catalog.drexel.edu/graduate/collegeofengineering/systemsengineering/)ystems Engineering (https://catalog.drexel.edu/graduate/collegeofengineering/systemsengineering/) and / or most other master degree programs within the College of Engineering.

Admission Requirements

Visit Drexel Engineering Graduate Admissions Guidelines (https://drexel.edu/engineering/admissions/graduate/admission-guidelines/) for details about requirements.

For more information about this certificate, visit the College of Engineering certificates (https://drexel.edu/engineering/academics/graduate-programs/certificates/) web page.

Program Requirements

SYSE 533	Systems Integration and Test	3.0
SYSE 640	Model Based Systems Engineering	3.0
SYSE 685	Systems Engineering Management	3.0
SYSE 688	Systems Engineering Analysis	3.0
Total Credits		**12.0**

Sample Plan of Study

First Year

Fall	Credits	Winter	Credits	Spring	Credits	Summer	Credits
SYSE 685	3.0	SYSE 640	3.0	SYSE 688	3.0	SYSE 533	3.0

Total Credits 12

Post-Baccalaureate Certificate in Systems Engineering for Software Applications

Certificate Level: Graduate
Admission Requirements: Bachelor's degree in engineering or other science
Certificate Type: Graduate Certificate
Number of Credits to Completion: 12.0
Instructional Delivery: Online
Calendar Type: Quarter
Expected Time to Completion: 1 years
Financial Aid Eligibility: Not aid eligible
Classification of Instructional Program (CIP) Code: 14.2701
Standard Occupational Classification (SOC) Code: 15-1243

About the Program

This graduate certificate is intended to enhance the skills of software engineers who work in areas of product design and development related to a variety of industries, but with a particular focus on the Department of Defense (DoD) and related business. In today's environment, managing the complexity of hardware product development and software interface coding requires technical knowledge and know how, as well as system engineering approaches with a focus on the product development lifecycle process. The courses associated with this certificate focus on software development but provide connection to development of hardware products and/or assets. The software enables integration and operation of the hardware and/or asset. This graduate certificate program will leverage this competency to provide systems engineering thinking paired with technical depth in software engineering design, development and integration. This pairing will enhance the skill set and talent of engineers who work in the field of hardware product design and development.

Note: Students interested in the International Council on Systems Engineering (INCOSE) Systems Engineering Professional (SEP) certification should take SYSE 688 *Systems Engineering Analysis*, as their elective course, as completion of two courses (SYSE 685 and SYSE 688) is needed for INCOSE SEP certification. For more information about this certification refer to INCOSE SEP Certification (https://www.incose.org/certification/becoming-certified/).

Courses completed in this certificate program can be applied to a masters in systems engineering (https://catalog.drexel.edu/graduate/collegeofengineering/systemsengineering/) and/or most other master degree programs within the College of Engineering.

Admission Requirements

Visit Drexel Engineering Graduate Admissions Guidelines (https://drexel.edu/engineering/admissions/graduate/admission-guidelines/) for

details about requirements. Note, interested students can apply for admission to this program in any term (Fall, Winter, Spring and Summer).

For more information about this certificate, visit the College of Engineering certificates (https://drexel.edu/engineering/academics/graduate-programs/certificates/) web page.

Program Requirements

Required System Engineering Courses		
SYSE 532	Software Systems Engineering	3.0
SYSE 640	Model Based Systems Engineering	3.0
SYSE 685	Systems Engineering Management	3.0
COE or CCI Technical Elective (1 Course) *		3.0
Total Credits		**12.0**

*

The technical elective must be a graduate level course (500, 600 or 700 series) in CS, ECE, ECES, ECET or SE
